

# Solar Strategies

**You knew Solar could do the job:** You didn't know how little it could cost, and how fast you can forget about your energy bill for wells, pump equipment, your whole property.

**NEW !!** PG&E aggregate metering program allows you to put the solar into any meter on your property, and credit all your meter bills.

**ABOVE PICTURE !!** This array in Sanger measures 101' x 85'. Less than 2/10ths acre. It will produce 100,000 kwh per year saving an estimated \$30,000. After tax credits and depreciation, the estimated payoff time is under 2 years.

I would like to invite you to see this project and allow me to give you a proposal. I will give you \$1,000 if my offer is not "significantly" less than any quote you have gotten. Financing Available.
