

STEP (Save the Elms Project) 2020 training opportunities

Happy spring (almost) ENA Tree advocates!

UPDATE: Due to concerns around COVID-19, the Tree Foundation has decided to cancel all of their STEP trainings at their originally scheduled locations. They will instead be holding virtual trainings most likely at the same dates and times as scheduled. They are figuring out the details of that and will send out instructions for everyone who signs up soon. So please sign up for the training date and time that works for you!

Signups will be available online at <https://www.sactree.com/events>.

[Save the Elms Program Community Scientist Training](#)

Save the Elms Program's (STEP) Community Scientists will be trained to monitor local elm trees for symptoms of Dutch elm disease (DED) over the summer using a mobile app. Learn how you can save our remaining public elm trees!

Online

Saturday, April 25 - 10:00A - 12:00P

We can't help but remind folks that get discouraged about the future of our elms in the long run, that in the short run it helps that we keep them as healthy as possible and avoid a massive die-off. That way they can be replaced as we lose them, and the baby trees can thrive among the mature trees that have shaded us for so many years.
