

# Professional Radar Guns

**F**or any speed measuring needs you may have we offer our (two) Stalker Professional Radar Guns. These are available with typical rechargeable batteries in the handles or with cigarette lighter cables. These will plug into the 12 volt DC accessory outlet of your car or boat and supply operating power for extended duty cycles.

These units will measure up to 300 mph from incredible distances over land or water. This is the most accurate method of rapidly measuring speeds and the accuracy is excellent (influenced by the angle of attack of the gun to the target).
