

2019 Capital Spending Ranking (based on 2018 data)

Capital Spending Rankings are determined by Gross Distribution Plant as reported on FERC Form 1 per customer (lower Plant = high ranking) . Gross distribution plant per customer is adjusted for customer counts, customer density per line mile, and peak kW per customer. (OLS regression analysis indicates that as customer counts and density increase, gross distribution plant per customer falls; and, as peak kW per customer increases, gross distribution plant per customer increases.)
