

The Grid Clip Assembly is a very important part of the EDGE Guard Dust Free Barrier System.

Our grid clips have been specially designed to secure the top rail of our Adjustable Panels to suspended type ceiling grid.

The low profile top section allows the clip to fit around the edge of the grid without disturbing the ceiling tile (flat or tegular). A plastic pinch block prevents damage to the grid.

Our clips work with standard 15/16" grid, fine line grid and extruded aluminum gasketed grid.

Grid Clips slide along the entire length of the panel top rail to adapt to the grid layout. **No tools are required.**

Grid Clips are included with our panel assemblies or may be purchased separately @ [www.edge-guard.com](http://www.edge-guard.com)
