Enabling

Assisting

Framework

What is DEAF?

The Defense Enabling and Assisting Framework (or DEAF) is **THE** State-of-the-Art digital communications security technology.

Voice and text transmissions (both incoming and outgoing) from cell phones, smart phones, and tablets with a dedicated telephone number can all be protected by DEAF. Skype and VoIP calls are also protected.

Groundbreaking Communications Cyber Security Tool

DEAF was developed and tested over a 5-year period by three leading computer scientists with backgrounds in:

- Physics
- Optoelectronics
- Encryption
- Compression
- Cryptography

An Overview

“It’s not based on cryptology or algorithms,” Mark Littrell, owner of Intecomco Global Security, who is in charge of the security component of DEAF said.

“It’s a totally different, unique and proprietary hard- and software system that serves more as a highly evolved cloaking device than it does an encryption system. I like to use the analogy of hiding a drop of water in the ocean.”

How Does It Work?

- Your subscription provides a service targeted to your specific telephone number. Our system is constantly looking for all phone numbers that DEAF covers.
- Once DEAF identifies a call in progress, it follows it to the number it is seeking (both outgoing and incoming.) It cloaks your call from both ends, thus making the contents of the call undetectable.
- With the speeds involved in quantum computing, your call is discovered and protected before it is even connected.
- Obfuscating data and voice transmissions using highly innovative proprietary technologies prevents third-party intrusions.

Why Should I Enroll in DEAF?

We know that a variety of agencies practice routine surveillance of our communications. Hackers have made identity theft an all too common occurrence.

The creators of DEAF believe strongly in privacy rights for individuals and have developed DEAF as a means of protecting YOUR right to privacy.

How Do I Know I'm Covered?

Once you purchase a subscription, your telephone number is separated from your contact information (for privacy and security reasons), sent to our Technology Team, and initialized in the DEAF system.

Your calls are protected beginning with your very first outgoing call.

Development and Testing

- DEAF was developed over a 5-year period from 2011 – 2016.
- DEAF was tested on phones in several industries where secure communications can be a life or death situation.
- As one of the final components of its testing phase in 2016, 96 phones used in Donald Trump's presidential campaign were enrolled in DEAF.
- Despite countless attempts, there were no successful third party incursions on any of those phones. In 2017, DEAF services were made available to the general public.

How Much Does It Cost?

**Monthly Subscriptions are
\$10 per telephone number**

**Annual Subscriptions are
\$120 per telephone number**
