

Winco's Assembly and Secondary Services To Serve You

Winco's standardization of process, use of technology, partner suppliers, and customer focus enable us to provide you superior service, competitive pricing, superior quality, and on-time deliveries.

For services we do not do in-house we have partnered with outside suppliers enabling Winco to provide you with parts complete and ready for your assembly line.

Riveting – Orbital riveting, staking, upset riveting, assembly or whatever your need, we have partner suppliers that can do it.

PEM Insertion – Winco's automated in-house PEM insertion equipment enables us to ship you ready-to-assemble stampings. Dedicated customer tooling and quick change technology are brought together to provide you complete stampings with our unique PEM insertion service.

Machining – Drilling, tapping, reaming, and countersinking are all done in-house. Dedicated tooling is used to assure part consistency and quality all within Winco's quick setup technology.

Welding – MIG, TIG, and resistance welding are all available through Winco's local supplier base. Winco only uses the best partner suppliers to ensure your parts meet or exceed your requirements, on time, every time.

Powder Coating, Painting, Plating, E-Coating & Heat Treating – Whatever you need to finish your part, Winco has partner suppliers. Integrity of process is ensured because Winco's suppliers mirror our superior service and quality philosophies.

Let us show you how you can put Winco's leading edge stamping technology and superior service to work for you.
