# Objectives

- Create models of student thinking
- Use lexical and statistical analysis to analyze students' writing
- Misconceptions previously identified by Genetics Concept Assessment (GGA) (Smith et al., 2008)

# Subset of GCA questions are particularly difficult on the post test

9 post test questions with a single incorrect answer selected by 20% or more of the students

Smith and Knight, 2012

Use the following mRNA codon key as needed to answer the next two questions (key omitted here):

The following DNA sequence (coding strand) occurs near the middle of the coding region of a gene.

DNA

### Students think stop codon stops transcription

the DNA. The first triplet of nucleotides AAU (underlined) is in frame for coding, and encodes Asparagine as the codon table above indicates.

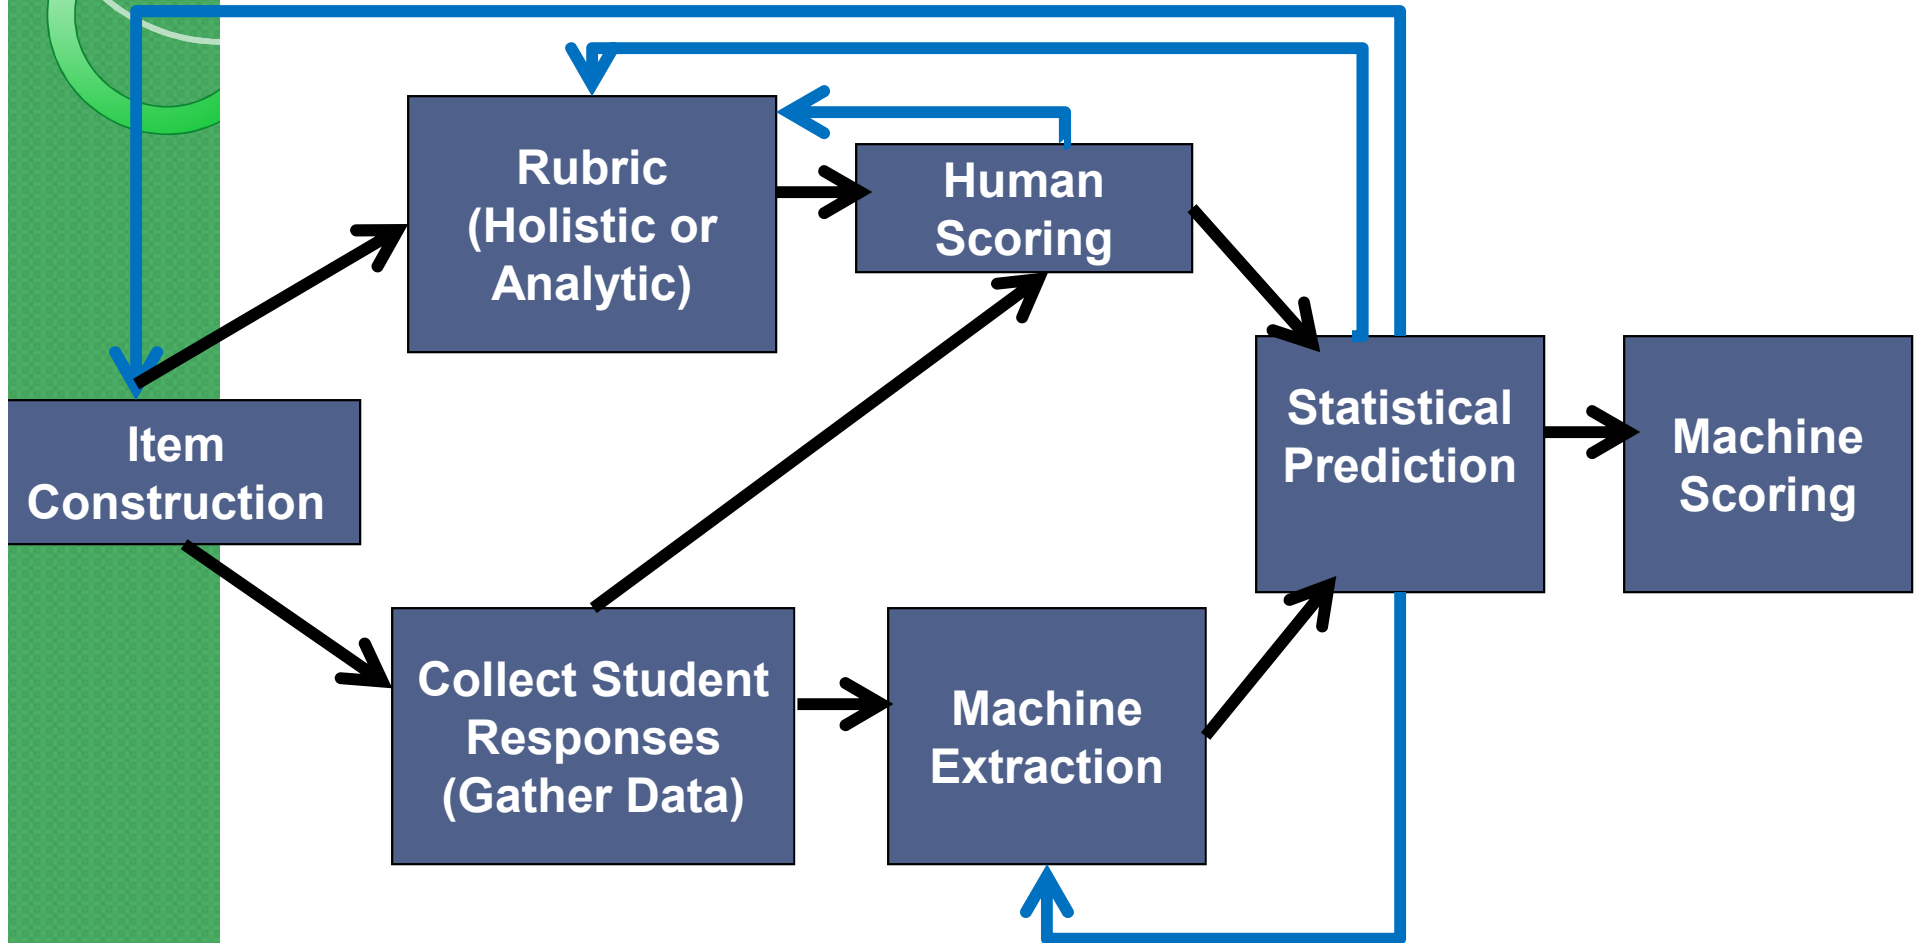

mRNA

5'—AAU GAAUGGGAGCCUGAAGGAG —3'

Which of the following DNA mutations is almost certain to result in a shorter than normal mRNA?

- a) A→G at position 50      2.0%
- b) G→A at position 53      46.5%
- c) C→A at position 58      1.6%
- d) None of the above      49.5%

# Automated analysis approach

# Convert MC to open ended questions

The following DNA sequence occurs near the middle of the coding region of a gene.

DNA  
5'-AATGAATGGGAGCCTGAAGGA-3'

There is a G to A base change at the position marked with an asterisk. Consequently, a codon that encodes for an amino acid becomes a stop codon.

How will this influence :

1. Replication?
2. Transcription?
3. Translation?

# Data collection

- 600 students at CU- Boulder and MSU taking genetics and introductory biology
- Post instruction on central dogma
- 314 responses analyzed
  - 213 - Model testing
  - 101 - Model validation

# Convert MC to open ended questions

The following DNA sequence occurs near the middle of the coding region of a gene.

DNA  
5'-AATGAATGGGAGCCTGAAGGA-3'

There is a G to A base change at the position marked with an asterisk. Consequently, a codon that encodes for an amino acid becomes a stop codon.

How will this influence :

1. Replication?

\* 2. Transcription?

3. Translation?

# Expert rating using holistic rubric for each CR response question

- Two experts rated explanations from correct answers using 3-bin rubric
  - Bin 1: Correct **62.1%**
  - Bin 2: Partly correct explanations with errors in facts or reasoning **10.2%**
  - Bin 3: Totally incorrect **27.7%**

# Text analysis

Id	Response	Categories
608	This will contain the gene that will not get cut short, only the protein will during translation.	rna short protein
607	In transcription though, the mutation will cause the mRNA to stop transcribing the DNA sequence prematurely due to the stop codon inserted in the middle of a coding region.	dna premature rna stop stop codon transcript transcription
606	May cause a incomplete mRNA to be transcribed, which could possibly lead to a non-functional gene product.	rna transcript
599	In transcription, the premature stop codon would change the RNA sequence from reading a G to reading a U, and would still not effect what information is transcribed.	no effect/no change base premature rna stop codon transcript transcription
596	The transcribed mRNA will be shorter	rna short transcript
593	transcription stops early. The base change caused a stop codon so instead of transcribing the entire DNA sequence it can only transcribe to the stop codon.	transcript base change dna premature stop

## Correct Responses

## Incorrect Responses

# Constructed response questions

The following DNA sequence occurs near the middle of the coding region of a gene.

DNA  
5'-AATGAATGGGAGCCTGAAGGA-3'

There is a G to A base change at the position marked with an asterisk. Consequently, a codon that encodes for an amino acid becomes a stop codon.

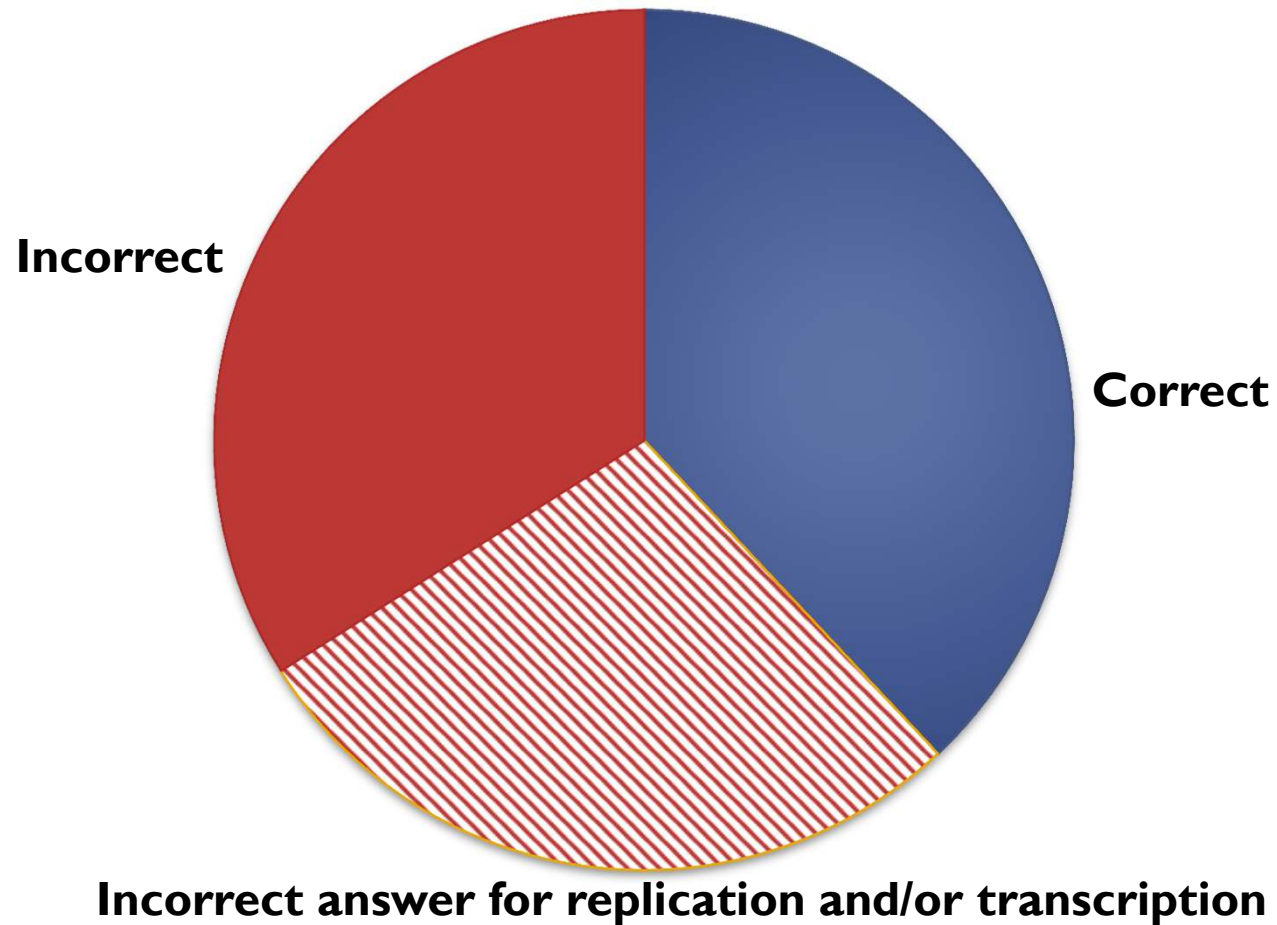

How will this influence

1. Replication?
2. Transcription?
3. Translation?

# Students response to Translation question

Some students who answer translation correctly do so for the wrong reason

## Summary

- Constructed response assessment with lexical and statistical analysis provide insight into student thinking
- This method enables us to trace student mistakes in central dogma

## Future directions

- Investigate the use of broader questions to capture thinking about the steps of central dogma
- Investigate other models of student thinking about central dogma
