## INSTRUCTIONS FOR FEEDING

Make sure sheep are not starved of salt or mineral. Remove salt and feed MoorMan's Sheep Mineral Block free-choice.

Consumption should average 3/4 to 1 1/4 lb per head per month.

If consumption is below 3/4 lb per head per month:

1. Put Sheep Mineral Blocks at several different places in the lot or pasture, preferably near areas where sheep congregate or drink water.
2. Break blocks into small pieces.
3. Sprinkle a little grain, oil meal, or salt over the blocks to help accustom sheep to the blocks.
4. Change to Sheep Minerals in the processed form.

If consumption is above 1 1/4 lb per head per month:

1. Move Sheep Mineral Blocks away from areas where sheep congregate or drink water.
2. Offer free-choice salt with the blocks for 2 to 3 days. Sheep may be overconsuming the blocks because of a salt hunger.

**CAUTION:** No copper compounds are added to this feed. However, naturally occurring copper in feed ingredients may combine to yield detectable copper levels. Care should be taken to minimize additional copper from forage, water, or other feedstuffs available to sheep.
