## CABLE LADDER SAFETY SYSTEMS

- The Lad-Saf™ flexible cable system consists of a top and bottom bracket that act as anchors for a steel cable that runs the length of the climbing area
- A Lad-Saf™ sleeve connects the worker to the system, automatically follows the user during the climb, and locks on to the cable in the event of a fall
- Designed for ease of use, economy, and versatility
- Integrated tension indicating bottom brackets take the guess work out of installation
- Galvanized and stainless steel construction stands up to harsh environments for added longevity
- Integrated shock absorbing top bracket reduces forces imposed on ladder during a fall
- Intermediate cable guides prevent cable wear against the ladder and permit the climber to bypass without disconnecting
- Complete system includes both top and bottom brackets, cable and cable guides. They do not include a sleeve, carabiner, or harness
- System is also customizable, call today to learn more

## TYCHEM® F COVERALLS

- A proprietary barrier laminated to a Tyvek® substrate
- Strong and lightweight, with broad chemical barrier
- Used for protection from chemical warfare agents
- Widely used by military first responders for weapons of mass destruction situations
- Taped seams, attached hood (respirator fit), front zipper closure, storm flap, elastic wrists and attached socks
- Colour: Grey
- Available in sizes small to 4X-Large

**Applications:** Because Tychem® F garments are only available with respiratory fit hood, storm flap and taped seams, these garments are intended for domestic preparedness situations where the potential for exposure to chemical warfare agents exists. When the hazard assessment consists of potential for exposure to the FBI's Toxic Industrial Chemicals most likely to be used in a terrorist threat, we suggest consideration of Tychem® CPF 3 or higher protection since permeation data is available on a much broader spectrum of chemicals including chemical warfare agents.

## KLEENGUARD\* A60 COVERALLS

- Bloodborne pathogen and chemical splash protection apparel
- Patented 3-layer fabric construction: middle layer of microporous film allows heat and sweat vapour to escape, yet protects against many dry particulates and liquids, even under pressure
- Outer layer - cloth like, yet tough and abrasion-resistant spunbond polypropylene
- Coveralls have patented Reflex design which is 7 1/2 times less likely to rip out than ANSI minimums and provides 12% more chest room and 6% longer body length
- Seamless front for more protection
- Resistant to many liquid and dry particulate chemicals
- Passes ASTM F1670/F1671 testing for penetration of blood, body fluids and blood borne pathogens

**Applications:** Emergency medical response, crime scene clean-up, embalming/forensics, tank cleaning, fiberglass manufacturing, animal research.

## WHAT IS THE CSA STANDARD FOR HIGH VISIBILITY SAFETY APPAREL (HVSA)?

CSA Standard Z96 is the standard for HVSA. It provides a standard for the elements that go in to the construction of an HVSA garment, which includes two types of materials: fluorescent background materials for daytime visibility, and retro-reflective tape for nighttime visibility. CSA also provides a standard for the design of the garment, according to the 3 different classes.

### BACKGROUND MATERIAL

Colours for background material can be fluorescent yellow-green, fluorescent orange-red or fluorescent red. These change in FR garments, which cannot hold fluorescent dyes because of the materials used. In these cases the material must be bright yellow-green or bright orange only. The requirements can be found in the CSA standard table 2a for fluorescent materials and table 2b for bright (FR) materials.

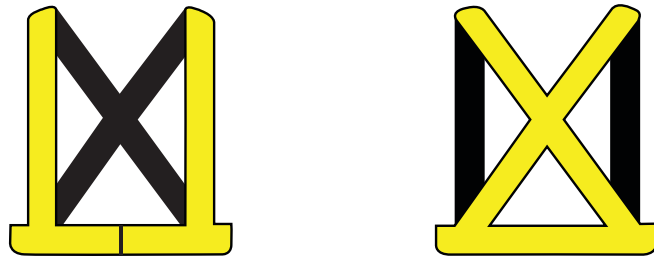

### RETRO-REFLECTIVE TAPE

If the retro-reflective tape is going to be coloured, it can be fluorescent yellow-green, fluorescent red-orange or fluorescent red. Otherwise, it should be a standard retro-reflective of either white or silver tape. Retro-reflective tape can either be level 2, level 1, or level FR, depending on the class of the garment required. The minimum performance levels for these tapes can be found in tables 5, 6, and 7 of the CSA standard Z96.

## DESIGN

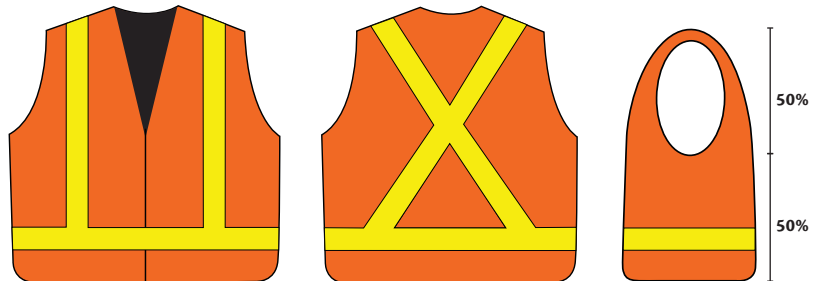

### Class 1

A Class 1 garment provides minimal visibility. The retro-reflective material must consist of two vertical stripes on the front, an "X" on the back, and a horizontal band around the waist. The horizontal band may optionally continue between the two vertical stripes on the front. Fluorescent background material is not mandatory on a Class 1 garment

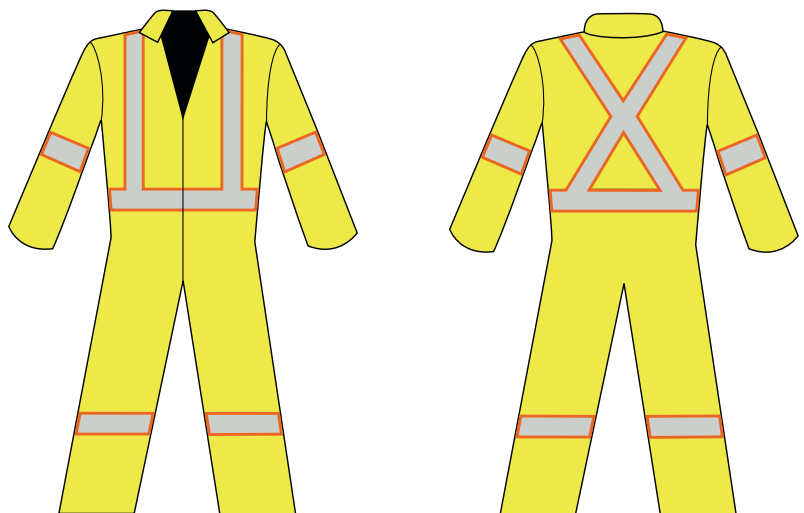

### Class 2

A Class 2 garment has the same requirements for retro-reflective tape as a Class 1. A Class 2 garment also provides full coverage of the upper torso with fluorescent background material, including over the shoulders, front, back and sides. Coverage on the side of the torso under the arms must cover at least 50% of the length of the entire garment.

### Class 3

A Class 3 garment includes all of the same requirements as a Class 2 garment, with the addition of retro-reflective bands on each limb. Additional fluorescent background material is not necessarily required, but will provide greater surface area for improved daytime visibility.

## ARC FLASH 40 CAL LIFT FRONT HOODS

- Shield and chin guard offer an additional 45° of vertical view over standard hoods
- Vertical peripheral vision field increases by 109% which allows for a clearer view of surroundings
- Contoured lens naturally extends range of peripheral vision giving user a greater outward visibility and more access to natural light
- Allows for use of task lights to add much needed convenience lighting in dark work place
- Contains 60% less fabric weight than standard hoods which makes it lighter and more comfortable to wear
- Reduction in fabric allows for more natural head movement and eliminates the need for frequent hood adjustments due to shifts in the excess fabric
- Industrial design creates a natural ventilation system beneath the brim of the hard hat
- Ventilated bracket design allows carbon dioxide and heat to escape as it rises from the body

# ELECTRICAL SAFETY

## MILLER® REVOLUTION™ ARC-RATED HARNESSES

Designed to protect workers from falls caused by electric arc-flash and arc-blast exposure when working at heights or in confined space applications near energized electrical sources.

- Features the same key elements as the Miller® Revolution Harness (see page 497)
- Kevlar®/Nomex® Miller® DualTech™ webbing - patent-pending 10 000 lb. tensile strength webbing is engineered with permanent fire retardant (FR) properties.
- Webbing offers the durability and FR properties of Kevlar® on the outer side, with softer FR Nomex® on the inside of the webbing for greater comfort
- Webbing assures arc protection and durability that eclipses any nylon webbing
- PivotLink™ design allows unmatched freedom of motion and comfort, while the unique cam buckles provide easy two-finger adjustment
- Leather insulators under all metal hardware offer additional protection for the worker
- Kevlar® web loop on the back pad allows for a "metal-less" connection when used with a Kevlar® shock-absorbing lanyard with a choke-off loop
- All Miller® Revolution™ arc-rated harnesses have bright red binding on every pad, making them easily identifiable as an arc-rated product
- Meets stringent ASTM F887-05 arc-flash standards
- Certified to CSA standard Z259.10

## NON-CONDUCTIVE CORRUGATED SWITCHBOARD NO. 702 & DIAMOND PLATE SWITCHBOARD NO. 701

CAN INSULATE UP TO 30 000 V!

- High-performance non-conductive matting protects personnel in areas with dangerous high-voltage equipment
- Maximum rating: 30 000 V
- Recommended usage: up to 17 000 V
- The corrugated surface is abrasion resistant and easily cleaned
- 1/4" thick
- Conforms to ANSI/ASTM D-178-01 Type 2, Class II
- Passes MSHA IC-246 fire resistance test (mining safety)
- Colour: Black

## ZORB-IT™ SPONGE NITRILE PALM COATED GLOVES

- Zorb-IT™'s unique, patent-pending "sponge nitrile" technology is changing the rules of what a flat-dip nitrile glove can be
- The sponge nitrile produces an extra-absorbent nitrile dip that conforms and adheres to the nylon shell like no other glove
- Beats the competition in laundering nearly three-to-one, and absorbs almost twice as much oil and grease while still delivering a sure grip
- Stands up to repeated washing with no shrinkage
- Accepted for use in Canadian food processing facilities
- Made of FDA compliant materials

# CUT RESISTANT GLOVES

## HYFLEX® 11-510 GLOVES

- Unique product design engineered for light to medium cut protection applications
- Designed to provide cut protection in applications where abrasion resistance and dexterity are a "must have"
- Protects hands from abrasion in the palm area as well as the back of the hand, giving workers more confidence when working in restrictive spaces
- Sure grip and protection
- Knitted with Kevlar® yarn from DuPont™, offers flexibility and comfort
- New ComfortFlex cuff provides additional protection as well as a soft feel around the sensitive wrist area
- Black foam nitrile ensures a sure grip in light oil and dry applications
- Accepted for use in Canadian food processing facilities
- Meets ANSI/ISEA 105 Level 2, EN388 Level 3 for cut resistance

## STAINLESS STEEL MESH GLOVES

- This double interlocked metal mesh ambidextrous glove is formed using state-of-the-art micro plasma welding techniques. The result is stronger, smoother, hermetically sealed ring connections that have no gaps or weak spots.
- The self-adjusting tensioning system allows for easy fit with no straps or buckles to fasten. There is no fabric cuff to wear out or become contaminated. The glove is easy to clean.
- Meets ANSI/ISEA 105 Level 5 for cut resistance

Micro plasma weld

Resistance weld

Micro plasma welds create value. Links are stronger so the gloves wear longer. There is also a lower risk of contamination because, unlike resistance-welded mesh rings, micro plasma welded rings leave no gaps to trap soil.

## PROTECT YOUR HANDS... USE THE CORRECT GLOVE FOR YOUR APPLICATION

### POLYMERS

Naturally occurring and man-made polymers are essential building blocks of hand protection. Specific polymers protect workers from specific hazards. There is no ideal glove that works in every situation. Best® utilizes a variety of polymer coatings and fabrics, designed for a variety of tasks.

#### NEOPRENE (POLYCHLOROPRENE, CR)

Strong, durable neoprene gloves provide excellent protection from physical hazards such as cuts and abrasions and also provide excellent chemical resistance for protection from exposure to organic and inorganic acids. Neoprene gloves also provide excellent protection from many organic solvents, oils, greases and petrochemicals and resist degradation from ozone, sunlight and oxidation. In addition, neoprene remains functional and flexible at temperatures ranging from -10° to 300°F (-23° to 150°C).

Neoprene

#### NITRILE (ACRYLONITRILE-BUTADIENE RUBBER)

Nitrile, a versatile synthetic copolymer, is used to make a variety of gloves ranging from heavy-duty work gloves to ultra-thin medical and clean room gloves. Nitrile coating provides tough protection from physical hazards such as cut, puncture or abrasion. Nitrile-dipped gloves also provide chemical resistance to petrochemicals (especially fuels), oils, greases, pesticides and other agricultural chemicals while providing excellent dexterity.

Nitrile

#### VITON® (FLUOROELASTOMER)

Viton® provides excellent chemical resistance to fuels used in the aerospace industry. It provides excellent protection from exposure to aromatic hydrocarbons such as benzene, toluene or xylene. Viton® gloves are available in unsupported version only. For working with extremely hazardous chemicals such as carcinogenic or highly toxic chemicals, Viton® works where no other glove works.

Viton®

#### NATURAL RUBBER

Natural rubber, the most elastic substance known, is found in over two hundred plants including the rubber tree (Hevea Brasiliensis), the source of natural rubber latex used to manufacture gloves. Natural rubber is a flexible and soft, yet tough and durable coating that provides excellent protection from physical hazards and provides an outstanding grip. Natural rubber provides excellent protection from exposure to aqueous chemicals such as acids and caustics, and limited protection from alcohols and ketones. Natural rubber gloves do not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline.

**CAUTION: Natural rubber latex has been shown to cause allergic reactions in sensitised individuals.**

Natural Rubber

#### PVC (POLYVINYL CHLORIDE)

PVC is an economical synthetic thermoplastic polymer that is exceptionally durable. PVC gloves provide excellent protection from limited chemical exposure and physical hazard protection. They are noted for being durable and function well in temperatures ranging from -30° up to 212°F (-34° up to 100°C).

PVC

#### BUTYL® (BUTYL RUBBER)

Butyl® rubber's tight molecular structure provides excellent chemical resistance to gases and ketones. Butyl® gloves are manufactured in unsupported version only and are used by the military for protection from chemical warfare agents. Butyl® rubber is severely affected by exposure to fuels and aliphatic and aromatic hydrocarbon solvents.

Butyl®

### TYPES OF GLOVES

#### DISPOSABLE GLOVES

This category of unsupported gloves is generally characterised as a thin-gauge glove that is not intended for repeated use. They may have a donning agent such as powder or a polyurethane slip coating, or powder-free.

#### LAMINATED GLOVES

This special nitrile-coated fabric is made by transfer-coating the nitrile polymer onto a textured surface and then laminating the nitrile film onto Sanitized® poly-cotton fabric for superior comfort and flexibility.

#### IMPREGNATED GLOVES

This special nitrile or PVC-coated fabric is made by knife-coating nitrile or PVC directly onto Sanitized® cotton fabric.

#### SUPPORTED GLOVES

These gloves offer a polymer coating over a cotton, nylon or aramid liner. The textile substrate imparts adds strength and resistance to abrasion, cuts and punctures.

#### UNSUPPORTED GLOVES

These are polymer gloves with no textile lining. These gloves include heavyweight, medium weight or disposable gloves. They may be chlorinated or have a cotton flock lining for easier donning.

#### CUT RESISTANT GLOVES

This special category is characterized by the utility of the gloves and includes either polymer-coated gloves or special high performance yarns that are designed to impart cut-resistance or combinations of these.

## SOL-VEX® UNSUPPORTED NITRILE 37-175 GLOVES

- Embossed, flock-lined
- Good protection against snags, punctures, abrasions and cuts
- Outstanding combination of strength and chemical resistance, when exposed to aromatic and petroleum solvents, as well as caustics and animal fats, they won't swell, weaken or degrade
- Superior choice over rubber or neoprene
- 13" length, 15-mil thick
- Accepted for use in Canadian food processing facilities

**Applications:** Food processing (red meat, poultry, vegetables, fruit, dairy and canning), automotive assembly and painting, aerospace and automotive degreasing, chemical processing, oil refining, petrochemicals, machining operations using cutting oil and coolants, metal fabrication, graphic arts, printing cleanup, furniture manufacturing, electronics (semiconductors, circuit board manufacturing)

## PREMIUM IMPACT & REPETITIVE STRAIN PROTECTIVE GLOVES

Fingerless glove provides excellent protection in applications where constant impact or vibration is a concern. Visco-elastic polymer (VEP) palm and thumb crotch padding absorbs and dissipates shock. Detachable leather wrist support for wrist repetitive strain protection. Nylon Lycra™ with grain leather palm for abrasion resistance in applications where it will be used on its own. Ideal for heavy industrial use, jackhammer, grinding and impact tool applications.
