General Advice for Forecasting:

- You want to be an Engineer...4 years of math!
- You want to be a welder....have you taken advanced metals or the prerequisites to get to Advanced metals?
- Are you considering University? Please consider 4 years of Math and Science and challenging yourself with dual credit or AP classes.
- When forecasting remember to find balance! Challenge yourself but do not overwhelm yourself! Choose a schedule that is a good fit for you and your many interests.
- Think about your semester 1 grades. Any D's or F's? Meet with your counselor to talk about how these grade may or may not impact your post-secondary options.
