Mr. Looney:

I am writing to provide request for required adequate migratory fish passage and for safe small boat portage capacity in Liberty University's pending FERC permit application at Scott's Mill Dam (P-14425). After Boshers fishway was installed near Richmond, Virginia, many Atlantic and Chesapeake migratory fish species were granted hundreds of miles of river access. Scott's Mill Dam represents the next successive dam that still blocks fish passage of multiple species, including American shad and eels. I have met with Liberty University representative Lee Beaumont and discussed these specific issues. I would appreciate your reply as to whether FERC will require these terms in an approved permit.

Thank you,

Pat Calvert
