**A Complete line . . .
FOR THE BEGINNER
FOR THE BOWHUNTER
FOR THE TOURNAMENT ARCHER**

By the nation's oldest manufacturer
of quality archery equipment

**the ultimate in beauty
and performance!**

Constellation

A classic combination of symmetrical beauty and functional design, the Constellation is introduced for the tournament archer who places a high value on perfect balance—in addition to maximum stability, cast and smooth shooting. This is the PRO BOW that "has everything."

The Constellation's oversize handle section, entirely of beautiful Brazilian Rosewood, adds extra weight to provide the utmost in smooth shooting. And the careful balance between deflex for stability and reflex for cast gives this bow the inherent characteristics necessary for consistent accuracy and flat trajectory.

All of these features have added importance and value because the individual archer can balance the Constellation exactly to suit his particular style and to compensate for the brace height which produces his best results. The forward-placed projections have capped ports for insertion of from 1 to 8 lead discs, so the precise combination of weights can be used to realize perfect balance.

Finally, the Constellation is made of the finest glass backing and facing, the most select woods and is finished in a satin gloss obtained through hand buffing. It is available for both right and left handed archers.

Cat. No. TBW-1 Length 68 in.....\$129.50
Pulling weights to 50 lbs. For arrows to 32 in.
Weighed at 28 in. draw
Recommended brace height: Approx. 8 in.

Cat. No. TBW-2 Length 64 in.....\$129.50
Pulling weights to 50 lbs. For arrows to 30 in.
Weighed at 28 in. draw
Recommended brace height: Approx. 7½ in.

Imperial

The YORK Imperial for 1964 is a tournament bow of unusual beauty that will measure up to the high standards of the most critical archer.

In designing and building the Imperial, YORK engineering and know-how has developed a bow with the highest degree of stability consistent with maximum limb efficiency. The oversize, all Brazilian Rosewood handle section adds that extra weight for silky smoothness. And, through precise design, the forward projections have been placed so as to provide exceptional built-in balance. This is truly a bow that will deliver.

IMPERIAL BOW FEATURES

The Imperial is made of the finest glass backing and facing, the most select woods, and is finished in a satin gloss obtained through hand buffing. It is available for both right and left handed archers.

Cat. No. SWR-1 Length 68 in.....\$89.50

Pulling weights to 50 lbs. For arrows to 30 in.
Weighed at 28 in. draw
Recommended brace height: Approx. 7½ in.

**matchless beauty teamed
with superb performance!**

Thunderbolt

This short, smooth shooting, hard-hitting bow has become known the country over as the favorite weapon among bowhunters. Designed and built to provide exceptional limb efficiency as well as dependability, the Thunderbolt has a handle section of rich American Walnut that is carefully contoured for a natural, comfortable feel. This is the most impressive hunting bow you'll ever handle.

THUNDERBOLT BOW FEATURES

The Thunderbolt is a full working recurved composite bow, made of finest glass backing and facing and the most select woods. It is finished in a satin gloss obtained through hand buffing. Extreme stability is provided by forward placement of the deflexed, saddle-type handle. Available for both right and left handed archers.

Cat. No. RRH Length 54 in.....\$49.50
Pulling weights to 70 lbs. For arrows to 30 in.
Weighed at 28 in. draw
Recommended brace height: Approx. 7½ in.

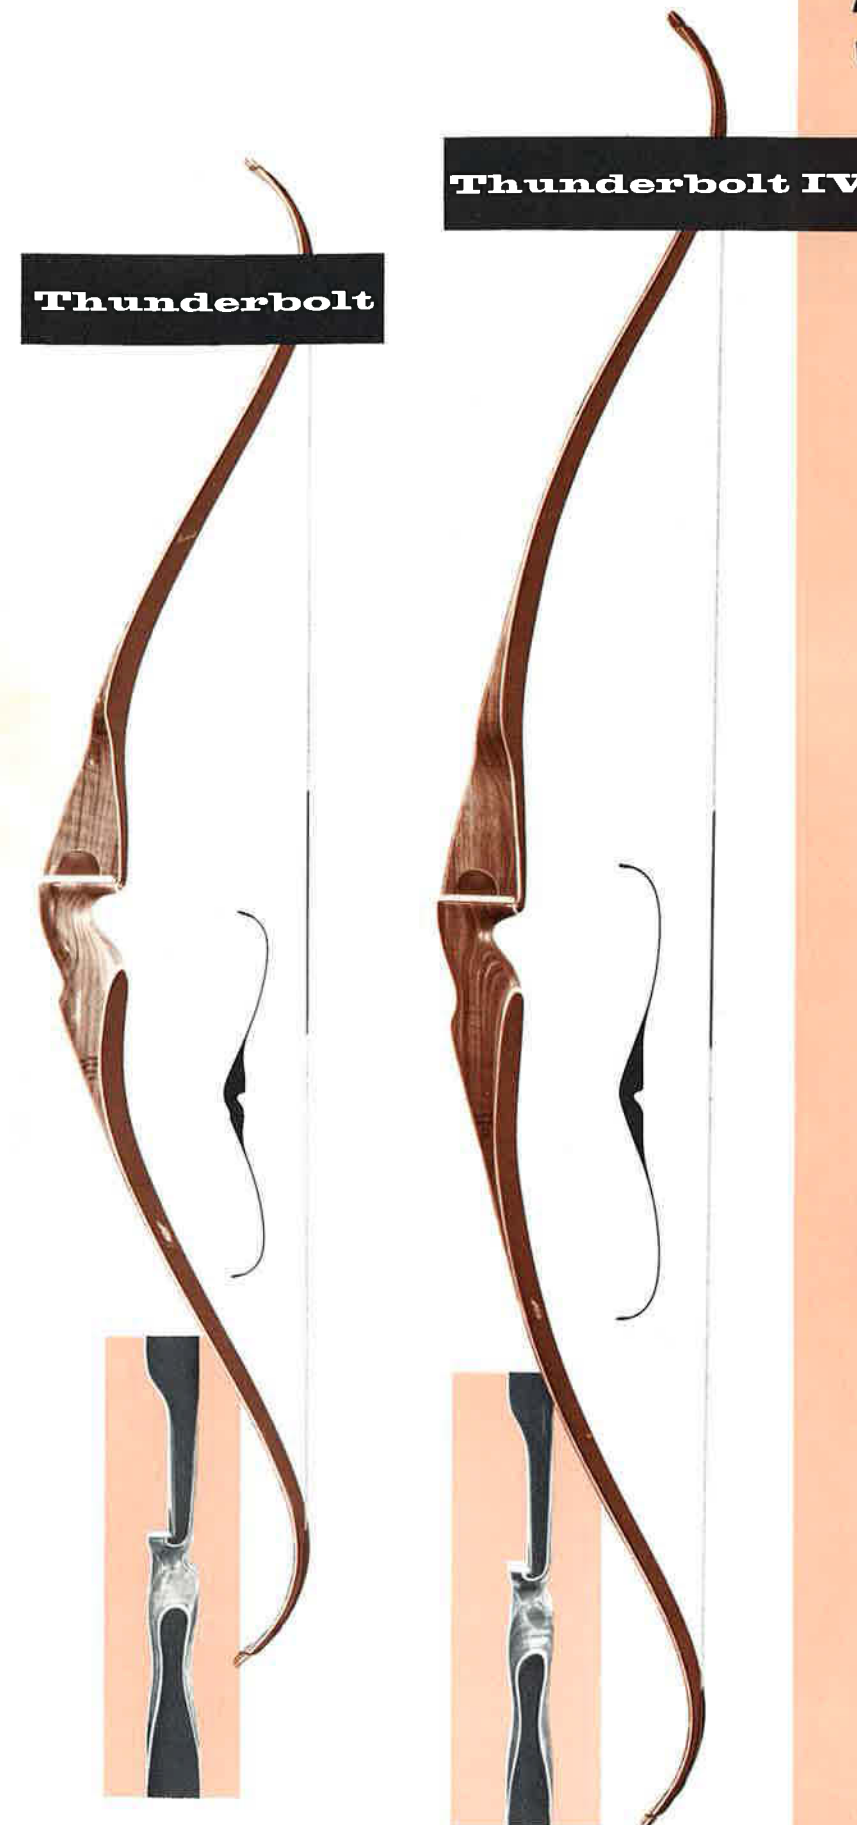

Thunderbolt IV

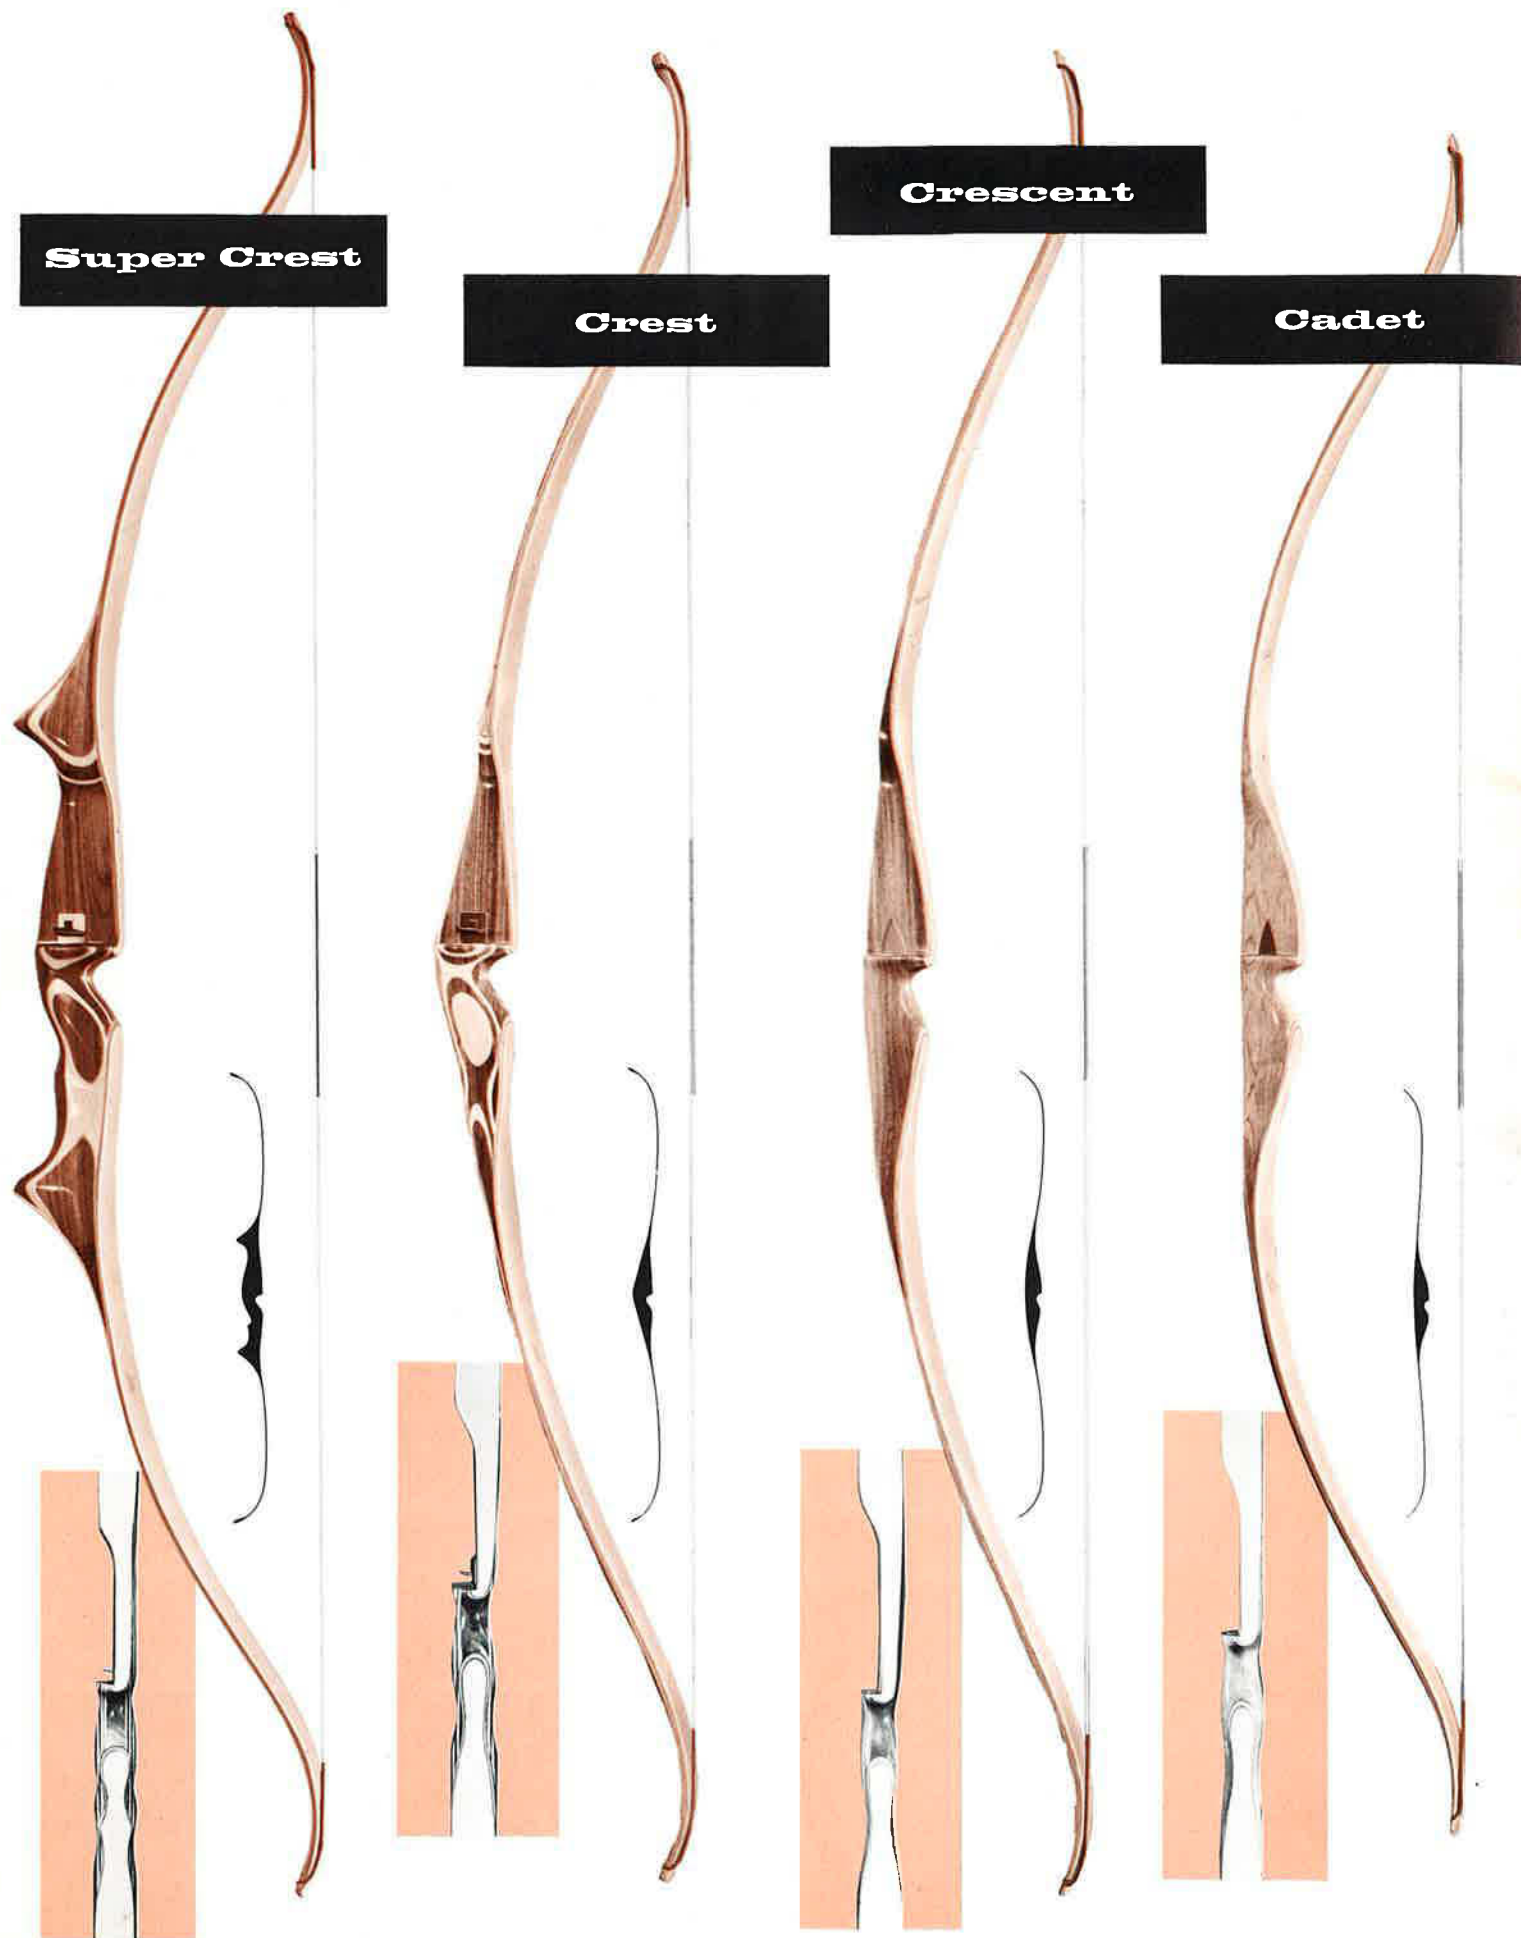

For those archers who want a longer, all purpose bow—extremely fast, light in the hand and ideal for field and target shooting as well as hunting—the Thunderbolt IV is first choice. A companion bow to the always popular Thunderbolt, the "IV" has that same comfortable feel with a lot of stability and cast for consistent, hard-hitting accuracy. You'll like the way it fits.

THUNDERBOLT IV BOW FEATURES

The Thunderbolt IV is a full working recurved composite bow, made of the finest glass backing and facing, and the most select woods. It is finished in a satin gloss obtained through hand buffing. Available for both right and left handed archers.

Cat. No. FTH Length 64 in.....\$49.50
Pulling weights to 60 lbs. For arrows to 30 in.
Weighed at 28 in. draw
Recommended brace height: Approx. 7½ in.

For real shooting satisfaction!

Super Crest

The Super Crest combines outstanding features of design with striking and harmonious laminations of White Holly and American Walnut to provide a remarkable bow of exceptional value. With longer limbs, extra weight in the handle section and the forward placed balance projections, it has particular appeal for the target and field archer. The Super Crest has shooting qualities, beauty and value that make it a real "winner."

SUPER CREST BOW FEATURES

A modified recurved, reflexed composite bow with wood core, backed and faced with finest fiber glass. Center shot, vertically and horizontally with full length sight window. Available for both right and left handed archers.

Cat. No. WRZ Length 66 in.....\$49.50
 Pulling weights to 60 lbs. For arrows to 30 in.
 Weighed at 28 in. draw
 Recommended brace height: Approx. 7½ in.

Crest

A companion bow to the Super Crest, the Crest is a moderately priced bow with a real feel for hunting or target shooting. Combining YORK custom quality with lightness and speed gives you uniform performance from the Crest, day in and day out. Offered in two lengths, this bow has rugged stamina and the fine shooting qualities demanded by the experienced archer.

CREST BOW FEATURES

A modified recurved, reflexed composite bow with wood core, backed and faced with finest fiber glass. Center shot, vertically and horizontally with full length sight window. Available for both right and left handed archers.

Cat. No. RRS-1 Length 64 in.....\$39.50
 Pulling weights to 60 lbs. For arrows to 30 in.
 Weighed at 28 in. draw
 Recommended brace height: Approx. 7½ in.

Cat. No. RRS-2 Length 60 in.....\$39.50
 Pulling Weights to 55 lbs. For arrows to 28 in.
 Weighed at 28 in. draw.
 Recommended brace height: Approx. 7 in.

Crescent

Here's a value-packed, budget-priced composite bow that is rugged and dependable, and gives real shooting satisfaction, too. The Crescent is an excellent first bow for the adult beginner or the new bowhunter. A reflexed, modified recurve with smoothness, accuracy, and graceful beauty far beyond its modest price. Available in right and left handed models.

CRESCENT BOW FEATURES

Modified recurved, reflexed, fiber glass backed and faced. Medium length sight window, saddle-type contoured handle. Double looped Dacron bowstring, served at ends and at nocking point. Satin smooth finish.

Cat. No. GBF-1 Length 64 in.....\$29.50
 Pulling weights to 55 lbs. For arrows to 28 in.
 Weighed at 28 in. draw
 Recommended brace height: Approx. 7 in.

Cadet

A quality composite bow at a remarkably low price. With the Cadet, you have a handsome, hardhitting bow that is light in the hand and a pleasure to shoot. It's perfect for beginners.

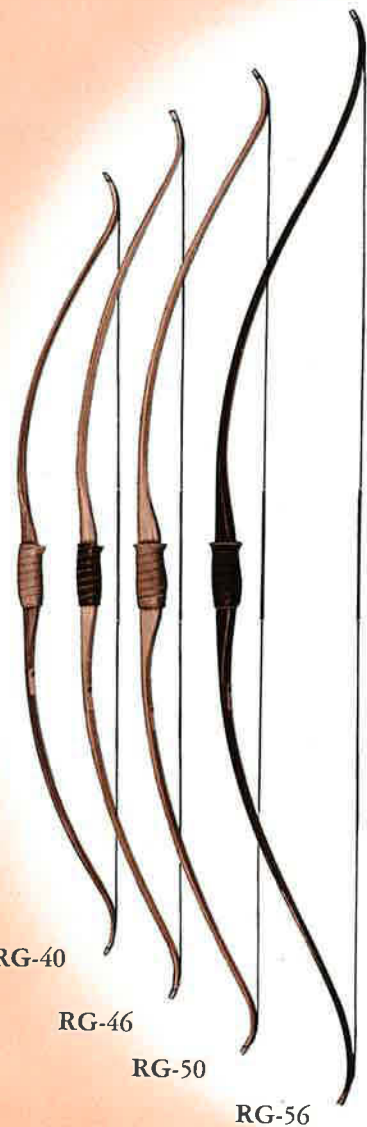

CADET BOW FEATURES

Modified recurved, reflexed composite, backed and faced with fiber glass. Sight window and contoured handle. Double looped Dacron bowstring, served at ends and at nocking point Available in right and left handed models.

Cat. No. BFB Length 60 in.....\$22.50
 Pulling weights to 40 lbs. For arrows to 28 in.
 Weighed at 28 in. draw
 Recommended brace height: Approx. 6½ in.

Quality Craftsmanship in Fiber Glass

Bows by YORK

SATELLITE SERIES

Perfect choice for beginning archers, school Archery classes! Bows in YORK's Satellite Series are made of tough, durable fiber glass with recurved ends, flat contoured limbs, molded saddle-type handles and built-in arrow rests. Approximately 20 lbs. at 22 in. draw. ea. \$6.50

Special Process, Pre-Tensioned, Tillered Straight-Limbed Fiber Glass Bows by YORK

As a serious art and as a sport, Archery has a long, colorful history. The very nature of Archery is such that breakage has been a factor throughout that history. But now there are YORK special process, pre-tensioned and tillered, solid fiber glass bows, each carrying an unconditional guarantee against breakage!

Fiber glass bows are composed of thermo-setting resin and countless filaments of fiber glass. The resin alone is useless for an archery bow, the limp glass is obviously useless. Unsupported, the glass is brittle, with no strength. Embodied in and surrounded by resin, it takes on tensile and compression strengths that are tremendous.

The fundamental goal in Archery is to obtain the flattest trajectory possible with the accompanying maximum striking power. The proper ratio of glass fibers to resin content, the uniform distribution of glass fibers within the resin and the organization of the fibers as the resin is heat-cured around them is of utmost importance. The perfection with which these requirements are met by the YORK process can not be approached by any other method.

Being unbreakable, it is obvious that there could be no better bows for boys and girls. Schools and institutional groups can do no better than to choose these bows. They are ideal for use in public ranges. In heavier weights, they serve the bow hunter at a very moderate investment.

Choose from the solid flat style SG group or the unbelievably low priced JG group. All carry the same YORK unconditional guarantee. All pack the same "bonus pounds per ounce" which only pre-tensioning can provide.

UNCONDITIONALLY GUARANTEED

Straight Limb Series Solid Fiber Glass Bows—Extra Value

These fiber glass bows by YORK are made especially for the beginner. Here are bows of unusual cast and power, practically indestructible, yet offered at unbelievably low prices. Every one of these bows is unconditionally guaranteed against breakage.

JG BOW FEATURES

Narrow, power-packed, anti-inertia limbs. Finest saddle type, molded, contoured handle. Dual arrow rests, for right or left hand Archers. Hemp string. Both bow and handle unaffected by normal heat or cold, or moisture.

- Cat. No. JG-48 4 ft. 8 in. Weights to 40 lbs.
Tillered at 26 in. arrow length. ea. \$5.95
- Cat. No. JG-46 4 ft. 6 in. Weights to 30 lbs.
Tillered at 26 in. arrow length. ea. \$5.50
- Cat. No. JG-40 4 ft. Weights to 22 lbs.
Tillered at 22 in. arrow length. ea. \$3.89
- Cat. No. JG-36 3 ft. 6 in. Weights to 16 lbs.
Tillered at 20 in. arrow length. ea. \$2.95

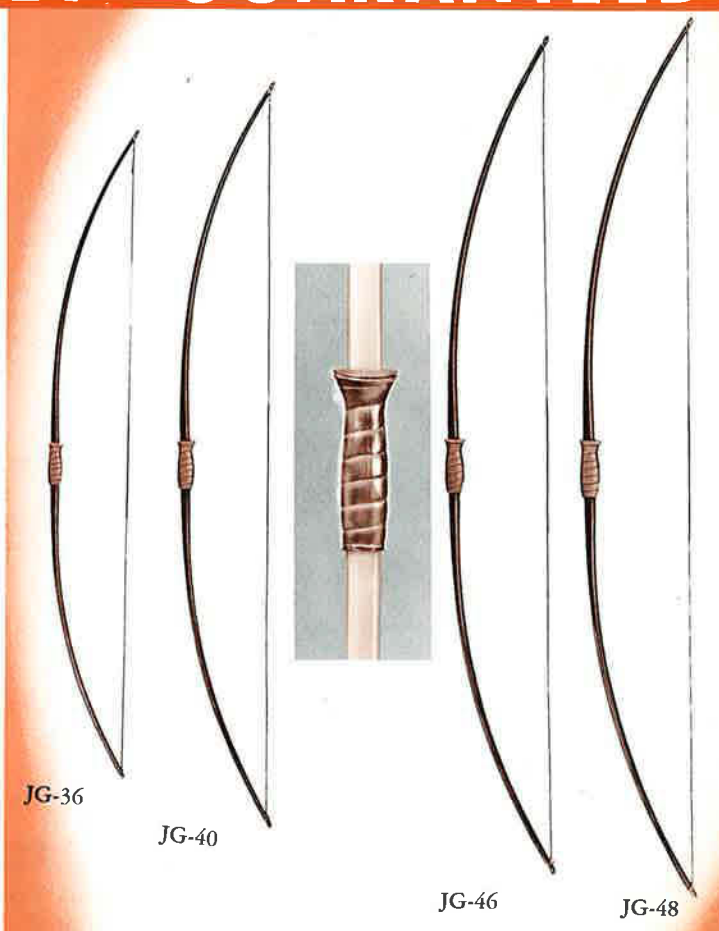

These bows may be used with longer arrows than those specified, each additional one inch of arrow length will add three pounds of pulling weight.

Solid Fiber Glass Bows With Wide Contoured Straight Limbs

Dual purpose . . . tremendous cast for hunting,—fatigue-free smoothness in longer lengths for continuous shooting. Flat style, with extended narrow section above handle for sighting. Finest saddle-type, molded, contoured, handle. Dual arrow rests, for right or left hand Archers. Double looped Dacron string, served at ends and at nocking point. Perfectly tillered. Will not take a set . . . can be left strung without bow damage. Both bow and handle unaffected by normal heat or cold, or moisture.

- Cat. No. SG-54 5 ft. 4 in. Straight bow.
Weights to 65 lbs. at 28 in. draw. . . . ea. \$11.50
- Cat. No. SG-50 5 ft. Straight bow.

Cat. No. MG-36
Cat. No. MG-24

YORK TARGET BUTTS

Tournament Approved

These targets are machine-made of very long length marsh grass. They are not attractive to vermin and thus do not constitute a warehousing problem in that respect. They are 4 inches thick, are firmly stitched with tarred sisal twine and will render long, satisfactory service. Being spirally-wound, they should not be confused with machine-made targets which are made by stuffing and quilting between two layers of burlap because these spirally-wound targets will render far longer and more satisfactory service.

Cat. No. MG-48 — 48 in., wt. approx. 65 lbs. . ea. \$25.00

Cat. No. MG-36 — 36 in., wt. approx. 37 lbs. . ea. \$15.00

Cat. No. MG-24 — 24 in., wt. approx. 18 lbs. . ea. \$8.00

IMPORTANT NOTICE:

MG targets are shipped direct from the factory in Columbus, Nebraska. If your location is served by rail, shipments of 100 pounds or more are prepaid. Orders less than 100 pounds can be prepaid by rail but the transportation charges will be added to the invoice without the benefit of a freight allowance.

When shipment by truck is specified, orders weighing 250 pounds or more will be charged \$.80 additional per cwt. Truck shipments less than 250 pounds but more than 100 pounds will be given an allowance of \$4.50 per cwt. against the truck charges. There will be no freight allowance on shipments less than 100 pounds.

DRAWSTRING TARGET FACES

Drawstring faces which can be applied to the target in ten minutes—no tools required. Made of dull oilcloth with heavy cloth drawstring bands. Non-glaring, standard colors; in most appropriate shades.

Cat. No. TF-48—48 inch. ea. \$6.00

Cat. No. TF-36—36 inch. ea. \$4.50

Cat. No. TF-24—24 inch. ea. \$3.25

PLAIN TARGET FACES

These oilcloth faces are the same as the TF faces listed above but are supplied flat to be sewn direct to the straw boss.

Cat. No. SF-48—48 inch. ea. \$4.25

BOW FISHING EQUIPMENT

CAT. NO. GFA SPECIAL BOWFISHING ARROW. Shaft is solid fiber glass, 5/16" in diameter. Special fishing point has double barbed, tempered tip which is removable for easy extraction of arrow from fish. Waterproof, rubber, 3-vane fletching. Brilliantly crested. Drilled holes provided for line at point and at nock. Lengths 28", 30".* .. . ea. \$3.00

CAT. NO. GFA-2 SPECIAL BOWFISHING ARROW. Same as No. GFA except point is not tempered, does not have removable, barbed tip. Lengths 28", 30".* .. . ea. \$2.50

*Individuals customarily use fish arrows up to 2 inches longer than their properly fitted target or field arrows.

DFP-35 Special Fishing Point. Double barbed, tempered point which is detachable for easy extraction of arrow from fish. 5/16 inch diameter, parallel bore. ea. \$1.00

M-55 Fishing Reel. Made of aluminum with flange mounting bracket. Easily taped to bow and it offers snag proof uncoiling. Complete with 60 feet of 72 lb. test line. ea. \$3.50

FP-35 Solid Double Barbed Fishing Point. 5/16 inch parallel bore. ea. \$.75

YORK BOWSTRINGS

CAT. NO. DS BEST QUALITY DOUBLE LOOP DACRON BOWSTRINGS. Served at the loops and at the arrow nocking area. Available for these bow lengths.

Bow Length	Bow Length
No. DS-59 for 5'9" bow	No. DS-52 for 5'2" bow
No. DS-58 for 5'8" bow	No. DS-50 for 5' bow
No. DS-56 for 5'6" bow	No. DS-48 for 4'8" bow
No. DS-54 for 5'4" bow	No. DS-46 for 4'6" bow
No. DS-53 for 5'3" bow ea. \$1.25

NOTE ON BOWSTRINGS: Bowstrings should be ordered by specifying the nock-to-nock length and weight of the bow. DO NOT ORDER BY STRING LENGTH. Nock-to-nock length of straight bows is easily measured, if not marked on the bow. If recurve bow length is not known, measure with limp tape held tightly against back of bow—tightly following all curves—from nock to nock.

CAT. NO. RS BEST QUALITY SINGLE LOOP DACRON BOWSTRINGS. Served at the arrow nocking area. When the nock-to-nock bow length cannot be accurately determined, it is sometimes better to order single loop strings because the one plain end permits adjustment. Packaged in plastic box.

Available in four lengths:

Cat. No. RS-48 for bows 4'8" to 5'
Cat. No. RS-52 for bows 5' to 5'4"
Cat. No. RS-56 for bows 5'4" to 5'8"
Cat. No. RS-60 for bows 5'8" to 6' ea. \$1.00

M-35 Feathering Tool. Sets 3 feathers at once. Handles feathers up to 5 in. long. ea. \$3.00

A Guide for Selecting Proper Equipment

CHOOSING PROPER ARROWS

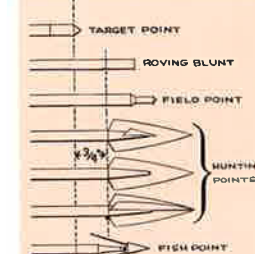

Fig. 1
Determining Arrow Length

If the beginner in Archery is to experience the progress which makes for lasting interest and maximum enjoyment of the Sport of Archery, he must begin with properly fitted equipment. Skilled and accurate shooting is dependent upon the consistency with which each successive arrow is shot. Consistency is dependent upon the degree of accuracy with which arrows are matched in weight and spine (stiffness) and upon the accuracy with which arrows are fletched (feathered). For consistent shooting it is also very essential that the pounds of force or thrust behind each arrow shot must be exactly the same. The "pounds of pull" of a bow is an expression of the pulling force required to "draw" that bow (pull the bowstring back) to a fixed distance. If the pulling weight of the bow (and the resulting thrust behind the arrow) is to be consistent, it will be readily understood that the length to which the bow is pulled must be the same for each shot.

In Archery the arrow is the gauge which regulates this pulling distance. For each shot the arrow should be pulled back to where the point is flush with the back of the bow (the bow surface farthest from the eye). When the point of the arrow is flush with the back of the bow, the length of the arrow should be such as to enable the Archer to "anchor" on his chin with the bowstring in front of his eye. When these requirements are met, the Archer is accomplishing a "full draw" (See Figs. 3 & 4). Any amount of length in an arrow which extends beyond the back of the bow is not only "dead weight" but also tends to eliminate any possibility of accurately gauging the length to which the bow is being drawn.

Fig. 2
Arrow Length is Measured from Bottom of Nock to Point Indicated by Dotted Line.

From the above, it will be observed that the selection of proper equipment begins with the choice of arrows. To correctly measure the length of arrows suitable for your use, place the nock of an arrow in the center of your chest about six inches below the chin. Hold the point end between the palms of your hands. With the arms extended to their full reach, straight out in front of you, the point of the arrow should extend to the tips of the fingers (See Fig. 1). This is the proper method of equipping the individual with "target" arrows.

For selecting the proper arrows of other types, refer to Fig. 2. Select each type of arrow so that the tips of the fingers extend to that point on the arrows indicated by the dotted line.

CHOOSING PROPER BOWS

YORK Solid Fiber Glass Bows

YORK pre-tensioned and tillered solid fiber glass bows are absolutely unbreakable when pulled by the bowstring as an Archery bow should be pulled. Because they are unbreakable, tradition is not so much involved in the selection of a YORK solid glass bow. This choice depends

upon the type of Archery in which the individual is most interested. A very short solid fiber glass bow (in its relationship to the length of the arrow with which it is used) will provide maximum cast and striking power. This can be ideal for the occasional shot experienced in bow hunting but, for continuous shooting in target Archery or in practicing the field rounds in training for bow hunting, a longer solid fiber glass bow will be appreciated for its smoother action and for the elimination of the kick and jar which causes fatigue when many arrows are being shot in succession. The specifications in the YORK catalog in connection with solid fiber glass bows are flexible but tend to provide smoothness in shooting. Therefore, the individual's choice of bow length, in relation to the length of the arrows which he has determined to be proper for his use, will depend upon whether he prefers the "smoothness" provided in the specifications or whether he would prefer the "hard hitting" power of a bow as much as six inches shorter.

Fig. 3
Full-Draw, Target Style.

YORK Custom Quality Composite Bows

This group of bows make up the YORK supreme quality line and provide the modern day archer with shooting performance, dependability and pleasure far beyond the dreams of archers ten years ago. Each of these bows is a unique and classic example of the bowyer's art, offering the utmost in value and individual design in every model.

Almost four decades of designing experience and production know-how, as well as modern materials and technology, are behind the YORK Custom Composite bows. The result is a group of dignified bows which are "light in the hand" for easy handling and smooth shooting, are loaded with power for hard impact and flat trajectory, and will discharge equal "loads" of power, shot after shot, whether in August or December.

Regardless of the choice, from the superb YORK IMPERIAL to the budget priced CADET, there is real pride of ownership in any of the YORK Custom Composite bows. You'll want to say to your friends, "this is my bow."

Fig. 4
Full-Draw, Hunting Style.

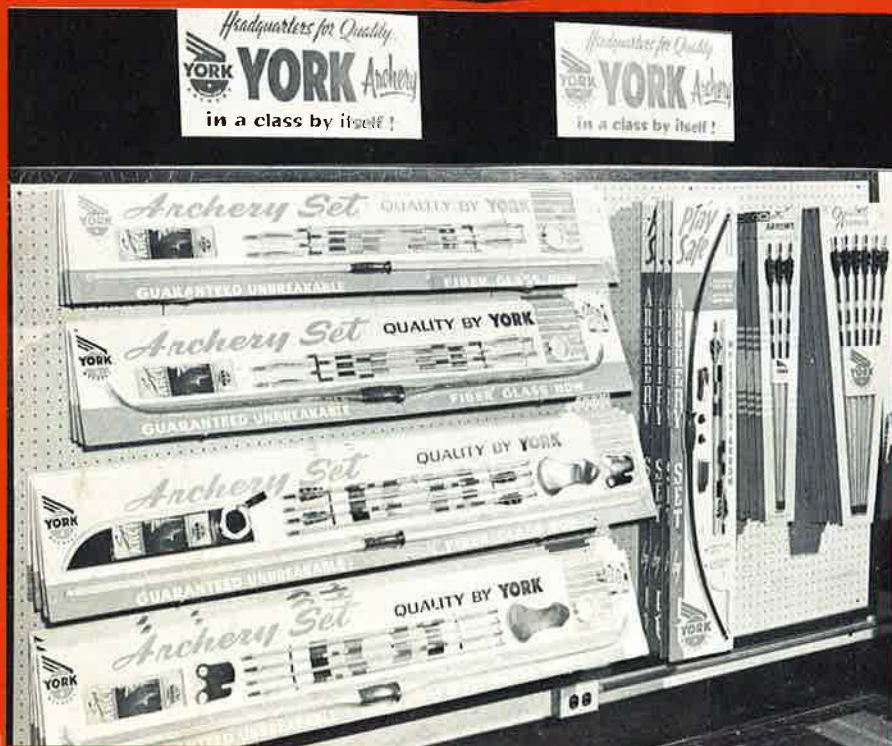

IN CHOOSING a BOW

If you are new in Archery first know your arrow length—give careful thought to the type of Archery in which you are going to be most interested—then carefully observe the specifications for each bow. Let your bow choice be a little long for target shooting or lots of field practice—a little short for maximum cast and striking power in hunting.

In choosing any bow—do not make the mistake of becoming "over-bowed." Choose one that you can pull without straining. You will be able to develop more proper shooting habits and progress more rapidly than if your bow is too strong for you. 35 to 40 pounds pull is about right for a man's target shooting bow. For hunting 45 to 55 pounds. Women's bows should be 15 pounds lighter. Bows for boys and girls still lighter. The stronger bow should come later when you have developed the pulling strength and when your judgment is supported by shooting experience.

Merchandising at its best... See YORK'S
FULLY BLISTER PACKAGED...

ARCHERY SETS AND ARROWS

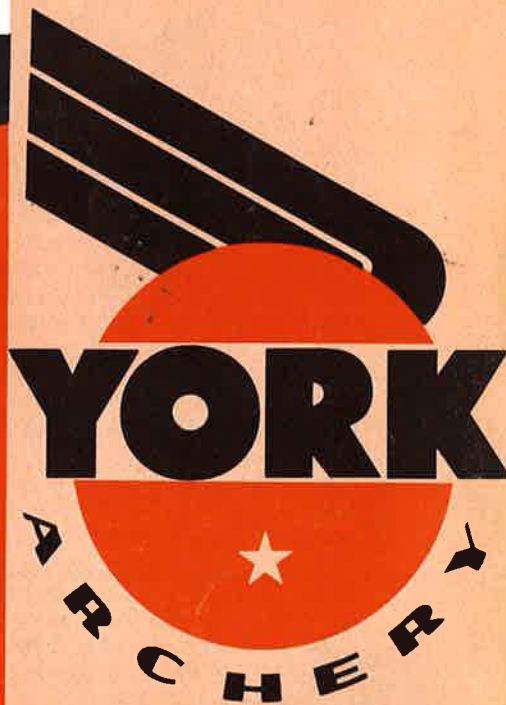

YORK product quality and YORK merchandising quality combine to give you YORK's exclusive blister packaging which builds interest and sales in your archery department. Sparkling clean, pilferproof, break-resistant packaging provides all items under clean clear plastic and sells more archery sets for you.
