

Dan Buell's Report on Echo Feb. 10, 2018

I gave a presentation of the Amazon Echo. We had a Amazon Dot and one of the devices that they can control with WiFi and voice commands.

The Echo has a on/off and volume up/down button on the top.

Demonstrated that saying Alexa I could do the following :

Request music, check my calendar for upcoming events and make phone calls to any of your contacts.

At this time you cannot phone 911 in an emergency
