English/Math Instruction San Antonio College 2006-2009
Gateway to College Curriculum Facilitator San Antonio College 2009-2014
Mathematics Instructor San Antonio College 2014-present

I have had the privilege of teaching all grade levels throughout my 46 years in education. My current work with math is supported by my background not only with understanding math skills but also the support that reading skills provide to working with mathematics. A student first reads a math problem before solving it.

We were a military family coming to San Antonio in 1971 and then choosing to retire here. My six children, fifteen grandchildren and six great grandchildren have often afforded me opportunities to interact with them as they have proceeded along their varied educational paths. To be effective, I believe that education should be individualized as no two students learn the same way. I believe that motivation can be equally important with instruction if a student is to succeed with mathematics.
