

Getting to the heart of cardiovascular disease

The **VICTORION-2 PREVENT** Study is testing an investigational drug to see whether it could help reduce the risk of future cardiovascular events, such as strokes and heart attacks, in people with **cardiovascular disease (CVD)**.

If you are interested in taking part in the **VICTORION-2 PREVENT** Study, we're searching for people who:

- Are 40 years of age and older
- Have previously experienced a heart attack, stroke, or reduced blood flow to limbs caused by narrowed arteries (peripheral arterial disease)
- Are currently receiving high-intensity statin

There are other criteria that you will need to meet to qualify for participation in this study, which the study team can discuss with you.
