Midview, Vermilion join Ohio Blended Learning Network *Association encourages high-quality blended learning in Ohio classrooms*

CINCINNATI— Midview Local Schools and Vermilion Local Schools have joined Lorain City Schools and 20 other schools and districts across Ohio in a statewide network that will promote and encourage the development of high-quality blended learning instruction in Ohio classrooms, the Network announced today.

The Ohio Blended Learning Network has grown to include 23 schools and districts representing more than 175,000 students in Ohio, from small charter and rural schools to the state's largest school districts.

"The members of the Ohio Blended Learning Network are banded together by the desire to see high-quality blended learning implemented in more classrooms in their districts and the state," said Andrew Benson, Executive Director of Smarter Schools, the Cincinnati-based non-profit that sponsors the Network. "We are pleased that Midview, Vermilion and Lorain –highly innovative districts – are in the Network."

"Joining the Ohio Blended Learning Network gives us the opportunity to learn from and collaborate with other schools that have successfully implemented blended learning throughout their districts," said Scott Goggin, Superintendent of the Midview Local School District. "Our goal is to foster a deeper learning for students through technology and good teaching practices."

The Network is chaired by Matthew Miller, Superintendent of Mentor Public Schools, a nationally recognized innovative school district that is implementing blended learning across its district. Mentor was inducted this year into the League of Innovative Schools, a national group of 43 school districts and educational agencies promoting education innovation.

"We definitely see the value in blended educational opportunities for our students and students across Ohio," said Miller. "I appreciate the opportunity to work with other superintendents and school districts to use blended learning to collectively reshape what teaching and learning looks like in Ohio."

The Network receives technical support from Education Elements, a California-based education consulting firm that has worked with more than 100 schools across the nation, including Mentor and Reynoldsburg in Ohio.

Midview Local and Vermilion Local join Lorain City Schools as members of the Network in Lorain and Erie counties. Other members include:

Cincinnati Public Schools	Minster Local Schools
Columbus City Schools	Nexus Academy of Cleveland
Dayton Public Schools	Nexus Academy of Columbus
Fairborn City Schools	Nexus Academy of Toledo
Fort Recovery Local Schools	Nordonia Hills City Schools
Hilliard City Schools	Northwood Local Schools
KIPP Columbus	Oak Hills Local Schools
Lancaster City Schools	Stepstone Academy
Milford Exempted Village Schools	Valley View Local Schools

The focus of the Network is to encourage the development of blended learning in Ohio classrooms as way to effectively integrate technology to extend the reach of educators and increase the engagement of students. Blended learning is an approach to education in which a student learns at least in part through online delivery of content and instruction. This is becoming an effective strategy for schools and districts that want to use technology as a tool to enhance and extend the skills of teachers and want to more effectively identify and meet the needs of students.

The Network plans to help create standards for high-quality blended learning in the state as a way to ensure that educators have a model to use as a guide for how they can use technology effectively as a tool to enhance teaching and learning. The Network also plans to help the state create a blended-learning credential for educators who learn to use blended learning effectively in their classrooms.

The Network is pursuing grant funding from Ohio's Straight A Fund for Fiscal Year 2015 to increase capacity in the state to train more educators to implement high-quality blended learning approaches in classrooms.

"We believe that schools and districts can help define and support high-quality blended learning and, with partners, can provide training to educators that will build capacity to create more blended learning classrooms in the state," said Benson.
