

Sagacious Investment Services diversifies their investments using research and due diligence when selecting opportunities...

No doubt you have heard that old adage 'the higher the return the higher the risk'.

One of the challenges we face today is finding those investment opportunities that not only guarantees preservation of capital, but also provides capital growth opportunities together with a better than average interest rate of return. Sagacious Investment Services is specifically designed to fill that niche.

Another well-known saying is '***Do not put all your eggs in the one basket***'. Diversification is important as a risk management strategy, and sadly there are many examples of investors who have lost the lot (or close to it) simply because they did not diversify. Sagacious Investment Services provides the astute investor with security of capital combined with very competitive interest rates, which can form part of the investors' investment strategy.

Just like the banks that pay an interest rate on term deposits maybe just above or even just below the inflation rate, Sagacious Investment Services re-invests the funds to achieve a higher rate of return than they are committed to pay the investor. Furthermore Sagacious Investment Services diversify their investment portfolio and maintain sufficient reserves to ensure all investor obligations, return of capital and the payment of interest, are met when due.

Where to invest? Invest where you are comfortable and confident with each investment. Use diversification, to achieve a balanced investment portfolio which, for example, could include but is not limited to:
