

Beimini Sustainable Resources LLC today announces the fifth anniversary of the company's founding, and the launch of its new corporate approach in support of its growing LED lighting presence.

STAMFORD, CT (Jun 6, 2016) - Beimini Sustainable Resources LLC (Beimini), the industry leader for custom LED lighting retrofits and new construction solutions, today announces the fifth anniversary of the company's founding, and the launch of its new corporate approach in support of its growing LED lighting presence.

Beimini was founded this week in 2011 by Chief Executive Officer and President, Jeffrey A. McGovern, MIES. McGovern had advanced recognition that a business model for custom LED solutions at direct pricing to a diverse array of clients with an even larger array of LED needs would profoundly impact the way that LED retrofits and new construction is perceived. During its initial five years, Beimini further developed its corporate approach into a simple formula Beimini 50/50/75™, which stands for 50% de-lamping with 50% wattage savings from replaced fixtures resulting in 75% overall energy savings.

The past five years have produced satisfied clients in the financial services; pharmaceutical; union; government; libraries; legal; manufacturing; international banking and restaurant market segments with new construction and retrofits as diverse as installations in offices, soffits, parking garages, trading rooms, lobbies, reading rooms, loading docks, manufacturing facilities and display corridors.

Beimini has continued to expand its custom applications for its trademarked Beimini Edge® LED panels with increased robustness of its lumen output and available color/size customizations. The ability to deliver custom solutions within 4 weeks coupled with personalized attention to detail and providing lighting surveys and recommendations have made Beimini a one stop go to for energy savings.

"Beimini is proud of its five-year track record of organic growth and satisfied clients while delivering energy lighting solutions," said McGovern. "At the same time, we are forward-focused to concentrating on several underserved market segments and have significant plans to deliver substantial additional innovation into those segments."

"Beimini has undergone a tremendous transformation since we achieved our initial Intertek ETL approvals in June 2012," said McGovern. "Today Beimini has been called on to provide custom solutions where the major LED light players either can not or will not spend the time and resources for clients. Filling that void is the success of our company."

About Beimini Sustainable Resources LLC

Since it's founding in 2011, Beimini has created numerous custom solutions for commercial and government entities. It currently serves the Northeast and Mid-Atlantic States with plans to expand to additional states during the next five years. Beimini is a Green Team Partner with ConEdison, PP&L and NJ Clean Energy. It participates with LEEP - Lighting Energy Efficiency in Parking Campaign <http://www.leepcampaign.org/supporters.html> and the Interior Lighting Campaign <http://www.interiorlightingcampaign.org/supporter-list>. Beimini is headquartered in Stamford CT. For more information, please visit www.beimini.com.
