

Zoom Whitening

Imagine making your teeth eight shades whiter – in 45 minutes – while you watch TV or listen to music!

With the Zoom! whitening treatment, you can.

Zoom! is an in-office procedure recently featured on ABC's Extreme Makeover. After having your teeth cleaned, this safe, effective bleaching treatment is broken into three identical 15-minute segments, performed all in one session:

1. Zoom! whitening gel is applied to your teeth.
2. A slightly heated lamp is shone into your mouth for 15 minutes, during which time you can relax and watch television or listen to music.
3. The light activates the ingredients in the gel, penetrating the teeth and bleaching away the discoloration – without harming your teeth's structure.
4. After 15 minutes, rinse!

That's all there is to it. Zoom! takes much less time than at-home kits and toothpastes, and makes your teeth an average of 2-4 shades lighter. You'll see immediate results that last longer. Book an appointment to have your teeth Zoom!ed today!
