Hello:

We are requesting an interview with Republican Presidential Candidate, Michael Bickelmeyer, by Nick Phillips, host of the Cleveland area talk show, the Advocate. This program is broadcast every Sunday evening at 8:00 p.m. on WHK, AM1420.

Ohio and its 18 electoral votes are crucial for anyone seeking the office of President of the United States. The largest concentration of voters is in Cuyahoga County. Participating in a local interview directed toward the Cleveland/Cuyahoga County area will introduce Mr. Bickelmeyer to the local listeners and enhance later campaign efforts.

Contact Susan Graves, Producer of the Advocate, to schedule an interview with Nick Phillips.

Susan L. Graves, Producer

1. Why are you running for President?
2. How widespread is your support?
3. How are you doing in the polls?
4. Considering that the 2016 Presidential campaign will cost nearly or more than \$1B, how are you going to raise the funds?
5. Any endorsements from the Republican Party?
6. Other endorsements?
7. Overcome lack of experience with managing a government bureaucracy?
8. Compensating for lack of foreign affairs experience?
9. Who would serve in your cabinet?

Mr. Bickelmeyer:

I am sorry to inform you that we will have to cancel your interview previously scheduled for September 24, 2015.

We will be in touch with you if another date becomes available.

Best of luck for your success in your political endeavors.

MICHAEL BICKELMEYER

INTERVIEW

WHK 1420 AM

SEPTEMBER 27, 2015

8:00 PM EASTERN

We've been waiting so long, We've been waiting so long,  
We've been waiting for our son to rise and shine.  
Shining still, to give us the will.

Can you hear me, the sound of my voice?  
I am here to tell you, I have made my choice.  
I've been listening to what's been going down.  
There's just too much talk and gossip going 'round.

Somehow, some day, we need Just One Victory and were on our way.  
Prayin for it all day and fightin for it all night.  
Give us just one victory, it will be all right.

You just call lonely Brother when you need a hand.  
We all need, somebody, to lean on.  
I just might have a question that you'll understand.  
We all need, somebody, to lean on.

Thank you for having me on air tonight Mr. Phillips am very happy to speak this evening. Yes Sir, I am running for the Office of President Of The United States Of America as a Republican in our 2016 Election.

I have 40+ years of work experience in the private sector, whereby I have labored in business, commerce, and industry. I have earned all of my education here in the Cleveland, Ohio area. I am a 1977 graduate of the City Of Parma School System. I earned my Associate of Arts Degree from Cuyahoga Community College 1985. I earned my Bachelor Of Science Degree, in General Business Administration from David N. Myers College 1996. I then graduated from Security Academy at Cuyahoga Community College 1999. I went on and earned my Master Of Management Degree from the University Of Phoenix Online 2013.

I believe that I am bringing things to the table for our 320 million United States of America population that no other Presidential Candidate in our Nation's history ever has, from any active or inactive political party in our Country. I have three federal projects on board with The White House, The United States Secret Service, The Central Intelligence Agency, The Department Of Defense, The Environmental Protection Agency, and The National Aeronautical Space Administration.

My three federal projects address National Security, Job Creation, and Environmental Issues. Two of them are at our United States Patent Office and the third is a federal grant application project at our United States Department of Agriculture in Columbus, Ohio.

I began forming my three federal projects from the idea phase prior to January 2002 before the 9/11 terrorist attacks that took place on American soil. They are now at the development phase.

I learned through my graduate-level marketing 271 course at the University of Phoenix, the average cost to bring one new idea to the development stage for a

Corporation is \$14 million dollars. I have been able to bring 301 applications to the development stage at a personal cost of under \$10,000 by working with our government.

My first federal project at our United States Patent Office is application number 14569250. This intellectual property is for an adaptable airport system with industrial zones and clean energy generation. This airport system is designed as a perfect square with two runways on each of all four outer sides. At the center of the airport system is a industrial facility incorporating recycling, die-casting, and manufacturing. This airport system is also designed to have steam heated runways for wintertime application. This entire facility will be powered by clean energy generation. These forms of clean energy generation are solar collectors, wind powered generators, hydrogen fuel cells, geothermal power generators, solid oxide fuel cell generators, biomass power generators, magnetic power generators, hydrogen electrolysis generators, and hydrogen fusion power generators.

Because the airport and industrial facility is powered by clean energy generation there are zero carbon emissions, zero greenhouse gases, and zero global warming affects.

My second form of intellectual property is a federal grant application project, employer identification number 01 – 0572298 with the United States Department of Agriculture in Columbus, Ohio. This industrial project is designed to be a recycling facility also powered entirely by clean energy generation. This industrial facility utilizes the same forms of clean energy generation as the airport system. They are solar collectors, wind power generators, hydrogen fuel cells, geothermal power generators, solid oxide fuel cell generators, biomass power generators, magnetic power generators, hydrogen electrolysis generators, and hydrogen fusion power generators.

Once again because the industrial facility is powered by clean energy generation, there are zero carbon emissions, zero greenhouse gases, and zero global warming

affects. The design of this industrial facility is comprised of a 300' x 900' building housing five industrial furnaces for smelting. Each furnace is designed to hold 100,000 pounds of product.

The potential combination of the airport system and the recycling facilities can entail glass, plastic, aluminum, copper, and steel as designated to their each and own separate industrial facilities. This brings to the table for America including the airport system, at minimum six facilities per state for a minimum of 300 facilities or applications across our Country.

My third form of intellectual property is a weapon system I have titled a gift for children. This application is also at our United States Patent Office. The application number is 14726657.

This invention, the substance and idea is an innovation designed specifically to ensure for the children of today a safe, and secure tomorrow. A device designed to keep families together without separation. This invention is designed for pest control elimination. This device when used, can ensure a clean pollution free environment, without any radioactive nuclear fallout. It can be remote activated from any location. This invention is created to protect, watch, and guard the free world. It is designed for the development and use by the United States of America for the primary protection of those that prefer the confidence of safety, and security. The function is to aid with the war on terrorism and drugs. This innovation is a defense system.

The using of this invention is the magnification of sunrays from a point and external from the earth, to erase from the world the spirits of dread, nightmare, and utilize pest-control. Sunrays are directed to the aft, farthest from Earth by reflective transfer and combination of reflective transfer combination relays, from a series of locations around the earth. These transfers of sunrays are from the sun. This innovation is a technological advance in warfare defense systems.

The application is intended for use by the United States of America to assist with the war on terrorism and drugs. This device is designed to keep families together without separation. This device is designed to eliminate targets without any radioactive nuclear fallout. This device is designed to eliminate the loss of American lives. This device saves time and labors. This device is cost-effective. Control and manipulation of this apparatus and reflective relays can be from remote location and locations such as earth, space, and outer spheres. The process of making this invention is through mold configuration process. This defense system is not labor intensive. The targeting system is designed to eliminate a single combatant with a variable expanding to eliminate entire countries. Because there is no use of nuclear technology this eliminates any radioactive nuclear fallout.

No other candidate that I know of has proposed any projects like I have which will generate job creation and propose an upswing of our economic domestic curve.

All you may be asking how widespread is my support and how am I doing in the polls? At this point I am funding my own campaign. I have between 4000 and \$5000 into it thus far. My earnings in 2014 were below \$27,000 for the year. Regardless since my making my federal projects public knowledge January 2002 I have never encountered anyone in the government or public private sector who has had any negative opinions about my three federal projects. I currently have a website online which is [www.MichaelBicklemeyer.com](http://www.MichaelBicklemeyer.com). My three federal projects are listed in detail in this website under the research tab. Also listed is my Social Security earnings statement over my total working years, my personal income tax returns since 2002, my business income tax returns since 2002, my college transcripts, letters of recommendation, confirmation of government communications, and three of my background checks, along with three of my research papers at the graduate level. I truly believe if our 320 million population in America could access my website information, no other candidate would ever stand a chance next to me. I currently am not even listed in the polls as a candidate because I have previously not received any media attention due to lack of campaign funding.

How will overcome lack of experience with managing a government bureaucracy? This is extremely easy to answer. I will be speaking at the advisement of high-level government advisers at the office of president. I must comply with that their attitudes and imperatives.

How will I compensate for lack of foreign affairs experience? This is also extremely easy to answer. I will hold attitude conveyed to me by The Central Intelligence Agency in all foreign affairs.

Who serve in my cabinet? I am delegating those decisions to the United States Secret Service to fill all my cabinet positions while President of the United States of America.

I already have a first choice for my First Lady and Vice President. At present I am currently bound not to release their names.

After I Am Elected to the Office of President of the United States Of America, I Am Going to Drive a Brand-New Indian Roadmaster Motorcycle from My Residence in North Royalton, Ohio to the White House.

I Will Then Donate the Indian Roadmaster Motorcycle to the Smithsonian Institution.

The Purchase Will Be Made from Burning River Indian Motorcycle Located in Sheffield Village, Ohio.

Once again thank you again Mr. Phillips for having me on air this evening, and thank you America. I look forward to serving you.

And now Mr. Phillips if you have any personal questions for me, I will be happy to address them.
