

What do you really know about the HPV Vaccine?

VACCINE

REAL  **ORGANIC TRUTH**

#RealOrganicTruth @realorganicT 

FACT: HPV infection is experienced by the majority of sexually active women and men without symptoms and **is naturally cleared** from the body within **two years by more than 90 %** of those who become infected.

FACT: Since most cervical pre-cancers develop slowly, **cancer can usually be prevented with regular screenings.** With the advent of regular pap screening in the 1960's, cervical cancer has declined more than 70% in the U.S. **Most women diagnosed with cervical cancer have never or not recently been screened.**

FACT: The HPV shot only protects against only 2-9 of the 100 total strains of HPV, therefore providing inadequate protection. **The most proven prevention method is a screening from an OB/GYN.**

FACT: As of 4/8/16, there were a total of **43,318 vaccine reaction reports** made to Vaccine Adverse Events Reporting System (VAERS) **associated with the HPV shots** including unexplained collapse, seizures, muscle pain and weakness; disabling fatigue, paralysis, brain inflammation, rheumatoid arthritis, multiple sclerosis, optic neuritis, spontaneous abortions, lupus, strokes, heart and other serious health problems, **and 218 deaths.** According to the CDC, only 10% of adverse reactions are reported to VAERS.

FACT: Since licensure of Gardasil in 2006, there have been about 213 VAERS reports involving amenorrhea or **premature menopause.** **Long-term ovarian function was not assessed** in the original safety studies or in human vaccine trials. It is not known whether the HPV shot can cause infertility, cancer or damage genes.

FACT: Many **countries removed HPV from their recommended schedule, but France, Spain, India, and Japan have each filed criminal charges** against HPV vaccine manufacturers for fraud, safety, and providing misleading information.
