DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DuPont™ LANNATE® SP must be used in accordance with the directions for use on this label. Always read the entire label affixed to the container (including the Limitation of Warranty and Liability) before applying. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation. Use of Lannate SP Insecticide, according to this labeling, is subject to the use precautions and limitations, imposed by the label affixed to the container, for LANNATE® SP Insecticide."

IMPORTANT

Before using LANNATE® SP, read and follow all applicable directions; restrictions; and precautions on the label affixed to the container. This supplemental label contains new or supplemental instructions for use of this product which does not appear on the package label. Follow the instructions carefully. This labeling must be in the possession of the user at the time of pesticide application.

APPLICATION

Apply at the recommended rates when insect populations reach locally determined economic thresholds. Consult the cooperative extension service, professional consultants or other qualified authorities to determine appropriate threshold levels for treatment in your area.

Follow-up treatments of DuPont™ LANNATE® SP should be applied, as needed, to keep pest populations within threshold limits. On most crops, LANNATE® SP should be applied at 5 to 7 day intervals to maintain control.

Use sufficient water to obtain thorough, uniform coverage. Since LANNATE® SP is a fast acting contact insecticide, best results follow direct spraying of the target insect.

Apply the low rates on small plants, small insects and light infestations of insects. Use intermediate rates on large insects and heavier infestations of insects. Use 1 to 3 applications of the highest recommended rate for controlling severe infestations. Thereafter, use the lowest rate possible to maintain control.
