

# FACIAL REJUVENATION

with PLATELET RICH PLASMA (PRP) by Dr. Susan Berry

The PRP Facial is commonly known as the "Vampire Facial". You may have read about this *natural rejuvenating* treatment in magazines.....it is the "buzz" word in facials that all the celebrities are having and with great results! Yes, it is backed by science and our clinic is very excited to be offering this new cutting edge anti-ageing treatment which can be used on the face, neck, décolletage and backs of the hands to *naturally rejuvenate* these areas. Your skin tone and texture will improve naturally as the PRP stimulates new collagen production. Your skin will naturally be more smooth and firm and with improved hydration. A youthful, radiant, rejuvenated skin is thus perfectly attainable with this fabulous *natural* treatment.

**What actually is a PRP rejuvenation treatment?** As skin ages it loses its elasticity and can begin to sag. Ageing skin loses collagen which manifests in the all too familiar wrinkles and fine lines. In addition, the ability to retain moisture is decreased as the skin contains less Hyaluronic acid and so the skin becomes dry, thus wrinkles and fine lines become more visible. The PRP treatment has been shown to naturally increase collagen production in the skin and to increase the blood supply to the skin thereby delivering important nutrients for skin health. PRP contains your own platelets and most importantly, the growth factors which are responsible for the *rejuvenating* and *revitalizing* effect of the treatment.

**What is involved?** Dr. Berry will take a sample of blood from you and use a special state of the art centrifuge to

spin the blood and obtain the all important platelets and growth factors. Dr. Berry uses a state of the art meso-therapy "gun" which delivers the PRP serum, rich in growth factors very accurately to the required depth under the skin surface. The "gun" is used to help obtain **optimal rejuvenating results** and for the comfort of the client. The gun makes the treatment *painless*. Mild redness which settles quickly, and possibly minor bruising may occur after the treatment. The latter is rare however. The procedure will take 45 minutes approximately and the whole consultation will take 1 hour. During this time Dr. Berry will

explain the procedure in more detail and answer any questions the client may have. She will also ensure there are no contra-indications to the treatment. If a client is on Aspirin or anti-inflammatory drugs, these need to be stopped for 1 week prior to treatment.

The client will see results between 2 to 6 weeks approximately but this may differ depending on if the client is a smoker, age, degree of sun damage etc. What is important to understand is that the **regeneration of collagen** resulting in improved skin texture and tone, also the improvement in elasticity of the skin is an on going process. Initially, 3 treatments are recommended at 4-6 week intervals and thereafter maintenance treatments of 1 to 2 each year.

For more information or an appointment please e-mail [info@theagelessmedicalclinic.com](mailto:info@theagelessmedicalclinic.com) or call **Tel. 0207-299-0394 & 02087-206-815** for details. Packages are available.

**Wrinkle Reduction Injections**, Juvederm fillers, Glycolic peels and other treatments are performed by Dr. Berry who also offers **BHRT (Bio-Identical Hormone Replacement Therapy)** for the treatment of *peri-menopausal and menopausal symptoms*.
