S&P 500 Index	7.25%	-	-	-
Russell 2000 Index	8.00%	-	-	-

**\*Disclosure:**

Buffered Annuities are index-linked variable annuity products.

The rates shown are for illustrative purposes, not an offer or contract. They are not intended to predict or project future performance.

Index performance, upside performance caps, upside performance trigger rates, upside dual performance trigger rates, upside participation rates, downside buffer protection levels and/or downside floor protection levels available at the time of investment may not be the same as illustrated.

Buffered protection levels vary based on the index and term selected, are subject to change, and may not be available with every option. The buffered annuity value will fluctuate and is subject to investment risk and loss of principal.

The index portion of a buffered annuity has a risk of loss that occurs each time you move into a new indexed account option after the end of an indexed term. However, the buffered level option selected in the indexed account helps protect you from some (not all) downside risk. If the negative return is in excess of the buffered protection level selected and advisor fee, then there is a risk of loss of principal.

A surrender charge may apply if there is a surrender period. A 10% IRS early withdrawal penalty may apply to withdrawals prior to age 59 1/2 and, in addition, investors may be liable for payment of federal income tax on the taxable portion of the withdrawal.

The values reflect the deduction of applicable charges and expenses. The values do not reflect the deduction of a 1/2 percent (0.50%) advisor fee.

**Performance Cap** - The most growth (or ceiling) you can earn for an indexed term. For annual lock accounts, it is the maximum percentage you can earn each year of the term.

**Performance Trigger** - The trigger rate is an amount that's credited to your account if the index change is positive or flat at the end of an indexed term.

**Dual Performance Trigger** - The dual performance trigger rate is credited to your account if the index change is up, flat, or down within the protection level at the end of a term. If the index change is down more than the protection level, the dual performance trigger rate is used to offset loss, which may provide a positive return.

**Participation Rate** - The percentage of any positive index performance credited to your account at the end of the term.

**Buffer (Protection Level)** - The percentage loss that Lincoln will absorb from a market downturn in the indexed accounts. If a market drop is in excess of the protection level, there is the risk of loss of principal.

Buffered annuity contract provisions are available upon request. Please request a Personalized Hypothetical Illustration and Product Prospectus for more detailed information before considering the purchase of a buffered annuity.

The information above is obtained from sources considered reliable, but it is not necessarily complete and its accuracy is not guaranteed. The rates shown are as of the date indicated in the table. Buffered annuities are subject to change in ratings and availability at any time.
