PRO-VISION[®] *Video Systems*

An American Corporation

At *PRO-VISION*[®] we engineer, source, manufacture, supply and install rugged, reliable rear vision and solid state video recording systems[™] exclusively for commercial, mobile applications.

Our only business is commercial, mobile video systems!

We believe in the philosophy of doing one thing and doing it very well. Our experience, focus and philosophy have built us a solid reputation for the best video systems in the industry.

We are the innovation, quality, value and service leader!

Our mission is to maximize the value of every customer dollar spent with our company by providing our customers the most *RELIABLE*, *SIMPLE*, and *AFFORDABLE*[™] product line in the industry backed by the absolute best customer and technical support.

We have your mobile video solution!

Review our product literature, visit our website or just give us a call. The *PRO-VISION*[®] Team is ready to demonstrate its commitment to being the industry leader!

“Seeing is Safety”.com

Accidents happen, but visibility related ones can be avoided!

Every fleet has a quantifiable rear vision related problem that causes backing accidents!

- Each year there are 300,000 reported backing accidents. (Source A)
- Backing accidents cause 500 deaths and 15,000 injuries per year. (Source B)
- The average vehicle operates in reverse less than 1 mile per year. (Source A)
- 27% of all accidents occur while operating in reverse. (Source A)
- 70% of backing accidents could have been prevented with the use of a collision avoidance system. (Source A)
- \$3,000 is the average cost of a non-fatal backing accident. (Source C)
- Failure to see a vehicle, object or person is the number one cause of backing accidents. (Source D)
- 65% of backing accidents involve a stationary object. (Source E)
- Blind spots can extend up to 160 feet behind a vehicle. (Source D)

Rear Vision Camera Systems are the only proven solution to eliminate costly backing accidents!

- Camera Systems eliminate rear blind spots and put a driver in full visual control of the rear of the vehicle. (Source D)
- Camera Systems have a 95% object detection rate. (Source E)
- Sensor Systems do not perform well enough to effectively prevent backing accidents. (Source E)
- Sensor Systems have as low as a 25% object detection rate. (Source E)
- Combining a Camera System and a Sensor System will not increase effectiveness over a camera system alone. (Source E)

PRO-VISION® is the industry leading supplier of rear vision camera systems to top fleets in the nation! Why?

- | | | |
|---------------------------------|------------------------------|----------------------------------|
