

How to Draw an Equilateral Triangle

The equilateral triangle is a easy to make.

1 – Draw line (A–B) to the length desired.

2 – With a compass, using the length between points A&B, draw an arc above line A–B from point A

3 - With a compass, using the length between points A-B, draw an arc from point B crossing the the first arc at point C.

4 – Draw a line between points A&C and a line between points B&C.

Remove the construction lines and you have an equilateral triangle
