

## Chapter 9 programming Practice Problem

Name: \_\_\_\_\_ Period: \_\_\_\_\_

Program these two classes. Also, include a parameter constructor for each class - you don't need a default constructor. Also, write an EmployeeTester class that tests the bonus, equals, and toString methods of both classes. Make sure you create multiple instances of all objects. Put each group members name on the program. Copy and paste neatly (readable) into a google document. Submit to google classroom by the end of the period.
