

Dellicker Strategies Cyber Security Services

Dellicker Strategies provides a complete set of cybersecurity services to schools and municipalities at discounted rates for members of the ESCNJ State Co-op (#65MCESCCPS). Contracting is already bid and preapproved via the Internet and Tech Consulting Services contract (ESCNJ 18/19-18).

Risk Assessments

Dellicker delivers a customized review of an organization's cyber security program compared to the National Institute of Standards and Technology (NIST) Cybersecurity Framework. We also conduct a complete network vulnerability scan to identify known risks and security gaps. Based on this data, we recommend immediate actions to mitigate threats and guide the organization through the process of implementing best practices.

Social Media Monitoring

A massive collection of raw data from social media sources, chat rooms, the Dark Web and message boards is continuously assembled and then automatically searched for indicators relevant to your enterprise. A highly-evolved content-scoring process isolates the most important results for prioritization. Strategic, relevant and actionable intelligence is delivered to our team and to designated officials. Alerts and timely information for decision support prompts a public safety response.

Network Risk Management

This includes automated monitoring of an organization's network, at line speeds, continuously watching for known threats, blocking them from gaining access, and intelligently collecting information for analysis. The LookingGlass™ threat mitigation suite, which includes ScoutShield™, NetSentry™ and NetDefender™, will defend your assets and fortify your network against malicious activity. This is a comprehensive program to mitigate risks inherent to cloud computing.

Enterprise Physical Security Monitoring Program

This included service aims to protect employees, leadership, students and citizens, physical facilities and assets. The package covers the organization's brand, web site, email domain, up to 500 office/facility locations, and up to 5 named executives. All data sources are monitored 24x7 for threats to harm individuals, facilities, or the district's reputation.

What Information Does this Solution Provide?

- Evidence of System Compromise or Infection
- Compromised Account Credentials
- Breach Monitoring and document leaks
- Suspicious Domain Registrations
- Phishing & Spear-Phishing Risk
- Indications of illicit use of network assets
- Physical/disruptive activity targeting the organization
- Physical/disruptive activity near the organization
- Posed threats to employees, students, or executives
- Posed threats to assets or facilities
- Reports of accidents or incidents
- Adversarial campaign or petition

Deliverables

- Item-by-Item Incident Reporting
- Monthly Summary Reports
- Program Management by Mazars USA
- Regular communications, feedback sessions, system updates and account management
- A process for handing additional requests and special investigations
- Human review of all incidents published
- Access to incident records
- Customizable dashboard of all relevant findings
- Advanced search and alerting features, customizable by local officials
- Continuous feed of top physical and cybersecurity events, news stories, and posts by credible experts.
