Selecting the Type of Mounting

Determine whether the roller shade is going to be installed inside the window frame or outside the window frame.

Inside Mount (IM) or Inside Bracket (IB)
Inside mount installations are mounted inside a window frame or some other recessed area.

Measuring Width and Length for Inside Mount
Width: measure across the top, middle, and bottom of the window opening. Using the narrowest dimension, measure to the nearest 1/8". By using the narrowest measurement the shade will operate correctly.

Length: measure the vertical dimension of the left, center and right side. Use the longer measurement, measure to the nearest 1/8". The factory will make the appropriate deductions from your measurements on both the tube and the fabric. Do not make any width or length deductions or additions.

Outside Mount (OM) or Outside Bracket (OB)
Outside mount installations are mounted on the wall, ceiling or on the window molding.

Measuring Width and Length for Outside Mount
Width: measure the width of the window opening from left to right and add as many inches as desired for maximum light gap coverage and privacy. If the shade is to be mounted to trim or framing around the window measure from the trim's outside edge left to right. The factory will make deductions from your measurements on both the barrel and fabric. Once you determine the desired width, round to the nearest 1/8".

Length: measure the window opening from top to bottom and add as many inches as desired to this measurement to allow space for mounting brackets above the opening and enough overlap at the bottom to avoid a light gap. Once you determine the desired height, round it to the nearest 1/8". The factory will make the appropriate allowance for the fabric wrap on the roller tube. If there is trim or framing around the window, measure from the trim's outside edge top to bottom, provided the trim provides the flat space required for an outside mount. If not you can mount the shade to the wall above the trim. In addition, if the window sill protrudes outside the window opening at the bottom of the window measure just to the bottom of the sill.

Confirming Measurements
It is standard to order width first and length second. The most common error in ordering roller shades is reversing the width and length measurements. Always confirm that the width is the measurement that goes across from left to right and that the length is the measurement that goes from top to bottom.

Fabric Deductions & Light Gaps
It is extremely important to note when measuring for roller shades that the actual fabric width of the shade will be less than the window measurement provided. To allow for the space that the shade brackets, clutch or motor, and the idler end take up, the factory must make a deduction so that the finished measurement or bracket to bracket measurement of the shade fits into the width dimension provided.

Please note the below deductions taken by the factory for roller shades without valances.

IB Measuring

OB Measuring

Type of Shade Operation	Fabric Width Deduction
Metal Spring Roller OB	-1"
Metal Spring Roller IB	-1"
R-Series Clutch 1 1/4" tube OB	-1 1/4"
R-Series Clutch 1 1/4" tube IB	-1 3/8"
R-Series Clutch 1 1/2" tube OB	-1 3/8"
R-Series Clutch 1 1/2" tube IB	-1 1/2"
R-Series Clutch 2" tube OB	-1 1/2"
R-Series Clutch 2" tube IB	-1 5/8"
Skyline Clutch OB	-1 1/4"
Skyline Clutch IB	-1 3/8"

Please Note: When a shade is over 100" in width or length an additional 1/8" is deducted from the fabric width

PORTER PRESTON
Quality Wholesale Window Coverings
Contract • Hospitality • Residential

Shade Measurements: (Critical Note)

If a specific fabric width is required, please make it explicitly known that this is fabric width. We suggest that this only be done for outside mounts.

Measure Twice......Because We Cut Once!

"The Wrap" - do I have to add the fabric that wraps around the tube?

The wrap is the amount of fabric that is added to the window opening length by the factory. The wrap will be added to the window opening size. When measuring the length of the shade measure from the top to the bottom of the window opening. Do not include any extra for the wrap, as this extra material is included automatically by the factory. The standard wrap for motorized and clutch roller shades is 10". The standard wrap for spring roller shades is 12".
Fabric Tracking & Telescoping

Roller shades that exceed a 3 to 1 length to width ratio meaning the shade is more than 3 times longer than it is wide, may have problems tracking or rolling up straight (think of putting paper towels back on the roll). This tracking issue, commonly referred to as telescoping, is an inherent characteristic of roller shade fabrics and should be explained to the end user.

Railroading

In ord erto make a shade that is wider than the fabric roll width, the fabric will be railroaded or turned sideways and cut to the width of the shade. Note: when railroaded you may see "curling" on the outer vertical edges of the shade.
If curling is objectionable consider using a different wider fabric or battens
(See Price Grid 11 page 39)

Wide Shades Shades over 126" may exhibit certain aesthetic characteristics such as smile lines, waves, wrinkling on the tube that could result in permanent damage to the fabric. Please consider speaking to Customer Service about splitting your shade with the use of couplers.

Telescoping and Tracking

Seams   In cases where the fabric is wider *and* longer than the width of the fabric roll, a second piece of fabric will be cut and welded (spliced) to the first fabric piece. A "Roman Look Roller Shade" is a perfect way to hide a seam as Pristine's joint seams and "Roman Look" seams are practically indistinguishable.

Roller Shades... Regular Roll or Reverse Roll ?

Regular Roll

Regular roll shades indicate that the shade fabric rolls off of the back of the roller tube. The shade cloth will be closest to the window with this option.
Regular roll shades are industry standard and yield the highest levels of energy conservation because of the shade's close proximity to the glass.

Regular Roll

Reverse Roll

Reverse roll shades indicate that the shade fabric rolls off the front of the roller tube. The shade cloth will be furthest away from the window with this option.
Reverse roll shades are most commonly used for the following applications:

• To avoid window obstruction (door handle, etc.)

• To reduce light gaps for corner or bay windows

RollEase®

SafetyHold ™
Bead Chain or Cord Loop Hold Down Device

Safety Instructions:

A WCMA 5.2.3 Warning Tag *(available from RollEase®)* must be fastened to the device prior to shipping.

The Safety**Hold3** must be secured to the clutch or headrail to make the shade inoperable without purposeful action of installer.

Use appropriate anchors when installing.

Installation Instructions:

To ensure safety, Safety**Hold3** *must be installed properly following these five steps.*

1 Thread bead chain *(or cord)* through base and around guide *(flat side of base facing guide).*

2 Push insert into guide until rounded edge is resting on the bead chain. *(For cord, flip insert so opposite side with serrated edge is resting on cord.)*

3 Squeeze guide legs while sliding spring over guide completely. *(Be sure spring is all the way over the legs of the guide).*

4 Slide base, flat side down, over curved end of guide.

5 Using screws provided, attach to wall, allowing some slack for bead chain connectors to slide through easily.

Patented Device:

RollEase offers this patented device for cord loops and bead chain loops. SafetyHold3 complies with the WCMA-ANSI standard 6.5 that requires a hold-down device to make the shade partially inoperable unless the hold-down device is installed.

The hold-down device is designed for continuous cord or bead chain loops that allows stop balls and/or connectors to pass through.

Parts Included:
Base — Guide — Insert — Spring — Screws

Test Data:
• Meets WCMA standards for hold down devices.

• Tested to ensure 10 year life of product.

RollEase® Engineered Child Safe Technology Built-In!

Child Safety
Child safety is of the utmost importance to Porter Preston. That's why we use warning tags and warning labels to highlight the potential hazards of corded window coverings. The tags and labels are attached to every one of our corded window treatment products. Porter Preston suggests choosing cordless alternatives or products with inaccessible cords.

Window Cord Safety
Parents and caregivers should pay close attention to window cord safety and the danger of children becoming accidentally entangled and possibly strangled in the window cords. Strangulation can occur when a child or pet places his or her neck between the exposed lift cord and the fabric on the back side of the shade.

Roller Shade Control Options

Pristine Roller Shades can be operated by either standard clutch, spring assist, spring roller or motorized options.

Standard Clutch Roller Shade

This roller shade is operated manually with a self-lubricating clutch mechanism. With a continuous loop control chain, shades can be rolled up, exposing a room to sunlight, or down to filter or block out the sunlight from entering the room.

Outdoor Clutch: Featuring Stainless Steel interior components and warranted for 10 years(See Price Grid 11 Pg 44)

Galaxy Clutch: An option other than a Spring Assist is a Galaxy Clutch. These are gear reduction clutches that will reduce the pull forces required to operate larger shades.

Caution:

Most clutches operate on a 1:1 gear ratio: meaning you pl chain 2 feet the shade moves 2 feet. By nature a Galaxy clutch, in order to reduce the pull force, will have up to 2 feet of chain pull to 1 foot of shade movement. As a result a chain stop cannot be used.

Two Models of Galaxy Clutches are available:	MSRP
G-200, for 1 ½" & 2" tube	Price Grid 11 pg 44
G-400, for 1 ½, 2", 2 ½" & 3" tube	Price Grid 11 pg 44

Spring Assist

When shades get larger, the pull force becomes greater. Pristine offers three different clutches with spring assists to help:

Galaxy 200 with Spring Assist: no ball stops, works with fascia and cassette

Galaxy 400 with Spring Assist: no ball stops, no fascia nor cassette option avail

Skyline 30 lb clutch with Spring Assist: ball stops can be used, no fascia, no cassette option

See Price Grid 11 for pricing-Page 44

ROLLEASE ACMEDA.

EASY SPRING AIR

The new Easy Spring Air system is a lightweight, child-safe, balanced shading system that allows users to easily set a shade in a desired position. This system is compliant with WCMA, Health Canada rulings, and the proposed CPSC regulations.

Compatible with the universal Skyline bracketing system, Easy Spring Air can easily replace an existing clutch system by only replacing the controls, leaving the fabric and brackets in place. Four control sizes allow shades to be made as narrow as 16".

The tension lock will keep the shade from losing tension during manufacturing, shipping, and installation. Once the shade is installed, fine-tune the tension with the tension adjuster without removing the shade from the brackets.

Spring Roller Shade

This roller shade is operated by a heavy-duty spring mechanism. All shades between 15" and 61" wide will be made with a 1" diameter metal tube. All shades between 61 1/8" and 97" will be made with a 1 3/8" diameter metal tube. Brackets are universal. By pulling on a handle or draw cord attached to the hembar, shades can be rolled up, exposing a room to sunlight, or down to filter or block out the sunlight from entering the room.

Minimum Width:	15"
Maximum Width:	97"
Minimum Height:	18"
Maximum Height:	108"

How to adjust the spring tension on a roller shade

The tension on the spring of your roller shade is already preset. If you wish or need to make any further adjustment, follow below noted procedures:

A: To Increase lifting power:
1) With the shade in the window, pull the shade part way down
2) Remove it from the mounting brackets and roll it half-way or so up
3) Replace it in the brackets of the windows and try it for tension and length that it will go down without being over-taught (unable to roll down anymore). Do not force it if it does not want to move downward as it is now over-wound - instead now try decreasing the tension as follows:

B: To Decrease lifting power:
1) With the shade in the window, roll the shade all the way up
2) Remove it from the mounting brackets and roll it half-way down or so
3) Replace it in the brackets of the windows and try it for proper lift & drop tension and travel distances top to bottom.

Note: If the shade will not travel all the way to the top, then the spring tension needs to be increased - follow procedure A.
If the shade will not travel all the way to the window sill or beyond, then the spring tension needs to be decreased- follow procedure B.
Hem Bar Options

Heat Sealed Hem Bar: This is Pristine's standard hem bar. A weighted aluminum weight bar is inserted into a 1 1/2" heat sealed pocket. Sealed Ends are the standard default. If open ends are prefered, please advise.

Fabric Wrapped Hem Bar: Available in Anodized, White and Black. Fully Wrapped, Half Wrapped or Fully Exposed. Handle included for cordless Shades, Optional Pull Hook available for hand to reach shades.
Grommeted Hem Bar with Hold Downs: available for exterior shades which require further security with a hold down system.

Roller Shade Valance Enclosure Options

Soft Valance

The soft valance is made out of the same fabric as the roller shade. The fabric valance has both a top and bottom pocket. The top pocket has a piece of wood inserted and the bottom pocket contains the same metal slat in the pocket as the roller shade. Screw through the top pocket and wood to mount the soft valance. The standard length is 6". It can be made any length up to 9" without a surcharge.

Roll: Available for regular roll and reverse roll shades
Color: Valance fabric matches shade fabric
Mount: Inside only (it does not have returns)
Maximum Width: 216"

Universal 5" Fascia System

The modularity of the Universal 5" Fascia System offers a variety of different motorized or manual configurations. It also –
- Can be configured for a single large shade (4 ¾" diameter fabric roll) or dual shades (2 ¾" fabric roll),
- Eliminates notching of fascia using chain diverters and guides,
- Minimizes fascia light gap across the header as the top of the fascia is even with the top of the brackets,
- Accepts standard and reverse roll shades easily with reversible mounting fascia,
- Blocks light entering from behind the shades with optional mount of second length of fascia.

The Universal 5" Fascia System is available in white, anodized and bronze finishes and compliments the 3" and 4" Fascia and the Cassette 120.

Cassette 100 & Cassette 120

Here at Porter Preston we offer one of the finest finishing options for Custom Roller Shades our Cassette 100 & 120 Systems. Here are some of the advantages for using these products:
- Three headrail sizes afford greater range of drop length possibilities and use of thicker fabrics
- Quick and easy installation
- Sleek look accommodates upscale commercial needs and affords greater residential appeal
- Sleek, curved design makes sunscreen fabrics more adaptable to residential use
- Intermediate bracket allows two shades in one headrail
- Available in five of the most popular colors: Anodized, White, Vanilla, Bronze & Black.

Lower Access Fascia / Flap & Hanger

The lower access fascia/flap & hanger is an aluminum extrusion that is installed at the bottom of a dry soffit to conceal the bottom of the roller shade. One should drill the mount strip wall hanger in the front of the dry wall soffit (pocket). For Pricing See Price Grid 11 Page 45

3" Lower Access Fascia / Flap and Hanger

Flap and Hanger provides a simple solution for concealing either a manual or motorized roller shade from viewers beneath the system. Flap and Hanger is a two-piece unit consisting of a "Hanger" which is mounted to the inside face of a gypsum pocket or soffit and a removable "Flap" which attaches to the hanger to provide a 3" return to conceal the shade mechanism.

Automation

Pristine roller shades can be operated by battery or hard wired solutions.
Control options are many from wireless wall switches and remotes to home automation interfaces.

Porter Preston offers many different solutions for the automation of window treatments. The simplest and most popular solution is Somfy RTS (Radio Technology Somfy) and we have featured these motors and controls here.

We are happy to quote motorization solutions such as Somfy ILT, Lutron QED & QS and Electronic Solutions. We will design the system that is right for your project. Ask about Porter Preston's Project Management and Installation services. We can provide a "turn-key" solution for your automation project.

Battery Powered Motorized Roller Shades

Somfy R28 RTS-1240292

Porter Preston offers Somfy R28 RTS battery powered motors. They are radio (RTS) controlled and fit 1 ½" roller tube. Their maximum lifting capacity is 10 lbs. In general they can lift a 96" x 96" shade. Expected battery life is 1 – 2 years depending on frequency of use. Lithium batteries are supplied and recommended when replacements are due.

Advantages:
- No need for wiring
- In wall and handheld wireless controls
- Same controls work with other RTS hard wired shades
- Shades can be operated individually, groups and sub-groups
- Small size

Disadvantages:
- Size / weight limitations
- Motor noise – rather loud
- Battery powered – eventually the shades will cease to function and the batteries will have to be replaced
- Motor speeds often will not be the same

Minimum Width: w/o fascia 16" with fascia 17"
**Maximum Width:** 96"
Somfy R28 RTS battery motor

Includes:
Battery wand
Battery wand mounting clips
8 lithium AA batteries

Somfy 12V DC Rechargeable Solar Battery Pack / Tube / Wand Kit
Part # 9019235

Kit includes:
(1) Photovoltaic Solar Panel in Bezel with Glass mount adhesive strips,
(1) 10" Y-Harness, (1) Alchohol Wipe, (1) Instructions (10) #9018621 NiMH(Nickel Metal Hydride)
rechargable batteries that fit in the reloadable battery tube.

- Used for powering Somfy LT30, CT32 and 2" Blind Tilt 12V Motors and Hunter Douglas 12 Volt
  PowerRise lift systems (see below).
- Low profile solar (photovoltaic) panel is compact, discreet and easy to conceal at
  just 1.57" tall x 11.85" Wide.
- Battery Tube / Wand 12" Y-Harness plugs directly into motor power port.
- Optional 24" or 48" Y-Harness available to extend reach of battery tube to motor.
- Replaces single (#9013741) and Dual (#9013742) throw away sealed battery wand.
- Battery Tube / Wand Dimensions: 20.625"L x 0.792D
- Warranty: 5-Years on Solar Panel, Wire Harness and Battery Holder. No warranty on NiMh Battery
  but has a life expectancy of 3-5 years.
- Somfy Cat. #9019235 includes (10)-NiNH batteries   **MSRP:** See Price Grid 12 Page 46-47 for Pricing

The NEW Somfy Rechargeable Solar Battery Pack is a group of components that work in unison to provide
a long life, renewable energy source for Somfy 12 Volt DC WireFree Motors. Patented energy saving
technology uses sunlight to power WireFree Motorized window coverings by recharging the NiMH battery.
Photovoltaics produce solar energy by converting solar radiation (sunlight) into direct electricty (DC)
providing a Green alternative to regular batteries. The WireFree Solar Pack's PV panel is mounted on the
inside of the window opening and converts the sun's light into electrical energy to power the window blind
motor. The Solar Battery Pack is cost effective by reducing battery replacement and preserves the
enviroment and provides a maintenance free soloution that does not require an electrician.
The Somfy Rechargeable Battery Pack is the ideal solution for hard to reach battery tube locations such as
second story windows where battery replacement can be challenging.

Wired Motorized Roller Shades
See Price Grid 12 Pages 46-47

- **Somfy Sonesse ST-30 RTS** (1001524) 24 volt motor is a 2 nm (newton meter– a power rating) low voltage motor. It is best used on smaller shades as it can fit in a tube as small as 1.5". The motor is quiet – giving off only a small hum as it operates. As these motors operate off of 24 volts they do require a power supply to operate.

  Minimum Width: 20"   **Maximum Width:** 96"
  Options: single motor power supply

      5 motor power / distribution panel
      10 motor power / distribution panel
      panel dimensions: 12 1/4" x 12 1/4" x 5 1/2" high

Sonesse ST-30 RTS

- **Somfy Sonesse 40 RTS 404 S2** (1001636) is a 4nm motor that runs on standard household line voltage. No power supply is necessary. An 11 1/2' cord is standard with the motor. Additional cord and plug is available at an additional cost.
  Minimum Width: 23 1/2"
  The Sonesse 40 series of motors are very quiet and deliver a lot of power in a 44mm or 2" tube size.

Sonesse ST-40 RTS

- **Somfy Sonesse 40 RTS 409 R2** (1001638) is a 9nm motor that runs on standard household line voltage. No power supply is necessary. An 11 1/2' cord is standard with the motor. Additional cord and plug is available at an additional cost.
  Minimum Width: 25"
  The Sonesse 40 series of motors are very quiet and deliver a lot of power in a 44mm or 2" tube size.

  For the Sonesse 40 RTS motors we can supply you with a grounded angle plug either loose or installed on the motor. If we install it on the motor for you we will cut the cord (11 1/2") to any length you specify. Note that this motor cable is NOT changeable so too long is always better than too short.

  Angle Plug comes either loose or installed on motor

Sonesse 50 RTS w/o Plug

- **Somfy Sonesse 506 S2 RTS (1001809)** is a 6nm motor that runs on standard household line voltage. No power supply is necessary. See cord and plug options below.
  Minimum Width: 31 1/2"

  See Price Grid 12 Page 46-47

Wired Motorized Roller Shades

Sonesse® ULTRA 50 AC -Part # 1002562
Ultra-quiet, ultra powerful, ultra flexible
Minimum System Width is 39"

Description
Motorize a wide variety of window coverings to create the perfect environment and enjoy the peace and serenity provided by the Sonesse® ULTRA. It offers exceptional lifting capacity so you can enjoy powerful operation in a quiet and relaxing environment.

Benefits
Silent & Strong

Enjoy energy savings, privacy and glare reduction in a quiet atmosphere
- Perfect for areas where silence is critical such as nurseries, bedrooms and offices
- Our patented technology provides strong performance that allows for muliti-banding
- of up to six shades

Comfort & Convenience

Continue your activities uninterrupted at home or work with the peaceful silent
- operation of motorized applications
Compatible with multiple control technologies so you can operate motorized applications with ease
-
Energy Savings

Compatible with timers, sensors and the myLink™ app for automatic operation
-

Description
ULTRA Powerful
Its superior torque of up to 6Nm allows the motor to be installed for almost any application on the market. Additionally, the high torque allows for a single Sonesse ULTRA to multi-band up to six shades.

ULTRA Quiet
Sonesse ULTRA 50 AC is packed with innovations and patented technologies that provide 6Nm of power and an acoustic performance of less than 38dB- the most powerful and quietest motor on the market.

ULTRA Flexible
Available for a variety of control systems, for all types of spatial configurations in commercial and residential buildings, in both new and renovated projects.

myLink™ RTS
Smartphone and Tablet Interface
See Price Grid 12 Pages 46-47

Synergy™ API COMPATIBLE · INTEGRATE · CUSTOMIZE

RTS Radio Technology Somfy®
OVERVIEW:

The myLink™ RTS Smartphone and Tablet Interface is a WiFi to Radio Technology Somfy® (RTS) bridge that can control up to 16 channels of RTS motorized products using the Somfy myLink apps for iOS and Android devices. Through the app, users can send immediate RTS commands, create scenes (a group of motorized products working together) and schedules (timed events). Users may access their myLinks from anywhere with the app's remote access feature. Though the myLink is a single-zone controller, multiple myLinks can be joined within the same system for multi-zone control. The myLink can also be used as a WiFi to RTS interface for integration with third-party control systems and is compatible with the Somfy Synergy™ API and Amazon Alexa.

amazon alexa

For information about the original myLink (Legacy version), see Legacy spec sheet. Legacy myLinks are identified with the status LED and setup button on the right side of the unit, and device IDs beginning with "AAAA" (EX: AAAA1234).

TECHNICAL SPECIFICATIONS:

- 120V AC; 50-60Hz
- Ultra Low Power Wi-Fi (802.11 a/b/g/n)
- 3.64" L x 2.35" W x 1.95" H
- Radio Frequency:
  - RTS 433.42 MHz
  - WiFi: 2.4 & 5GHz
- iOS Version: 7 and higher
- Android Version: Jelly Bean and higher
- FCC ID: DWNMYLINK
- Operating Temp: 41°F to 113°F (5°C to 45°C)
- Rated Current (Amps): 10 to 50 milliamps
- Insulation Class: Class II
- For Indoor Use Only
- Enclosure:
  - PE
  - UL94V-0 flame rating
 - RoHS compliant
- Shipping Weight: 1lb

FEATURES SUMMARY:

- Control for up to 16 RTS channels per myLink™ from iOS and Android devices
- Join up to 10 myLinks together for multi-zone control
- Manually activate RTS products
- Automate window coverings with scenes and schedules
- Supports Up/Down/My/Stop commands and incremental control (tilt/brightness)
- Multiple users
- Remote access
- Integration with third-party systems over IP
- Compatible with Somfy Synergy
- Compatible with Amazon Alexa

BEST WIRING PRACTICES

Before installing the myLink, make sure that the RTS system is fully operational with all motor limits set and a programmed RTS transmitter. Plan to install one myLink per zone. Actual specification and RF range will vary depending on number of RTS channels and environmental conditions (building materials, RF interference, etc.).

The diagram shown below is meant for illustrative purposes to show the connections from product to product. This device could be used in other configurations than shown below.

Pristine
Roller Shade

PORTER PRESTON
Quality Wholesale Window Coverings
Contract • Hospitality • Residential

Roller Shade Material Pristine Roller Shades are available in many colors, textures and privacy options from the top manufacturers in the world. In addition we will also use Customer's Own Material (COM) to meet the needs of our customers that require color and/or pattern coordination. Contact Customer Service for Pricing.

Pristine Roller Shade Material tend to fall into three categories: Solar Screens, decorative Translucents & Blackouts. Within these three categories the fabrics range from functional to decorative and everything in between.

| **Solar Screens** | These are Mesh fabrics designed to control natural light. |
	Available in many "openness factors" i.e. 1%, 3%, 5%, 10%, etc. Openness Factor affects comfort, the degree of visibility and glare control.
	Protects interiors and furnishings from the damaging rays of the sun.
	Reduces glare for televisions and computer screens.
	Preserves the view to the outside. *Note that this view is from the relative dark side to the relative bright side so at night a lit room will be visible from the outside*.
	Provides a decorative aspect – especially with the latest in Solar Screen designs.

Caution!! Some Solar Screen fabrics installed on windows with existing insect screens can cause a **"Moiré Effect"** *which could be objectionable to the end user. It is always best to test for this with a fabric sample BEFORE ordering the shades. If it is winter be sure to ask as sometimes the insect screens are removed for the winter.*
"Moiré Effect"

Translucents	These fabrics let in some light but none of the view affording a nice warm glow in the daytime and privacy anytime.
	Pristine has Translucent fabrics that have a matching Blackout counterpart.
Blackouts	As the name implies these fabrics will not allow any direct light to pass through. There is no openness in the fabric, however some portions of the fabric composition are translucent enough that you may see a "glow" behind the shade, particularly if the window is facing east or west. No UV rays come through the fabric and there is complete privacy. The "glow" varies by product. See the chart on page 21 for specific comparisons.
	Pristine has Blackout fabrics that have a matching Translucent counterpart.

Caution: While a Blackout shade does not allow any light to pass through the fabric, light can and will bleed around the sides, top & bottom of the shade. Pristine offers valances, side rails and sill rails to eliminate all light from the window.

Warranty

LIFETIME LIMITED WARRANTY FOR CUSTOM ROLLER SHADES

Porter Preston proudly extends a lifetime-limited warranty on the enclosed product to the original retail purchaser as long as the product remains in the original window.

WARRANTY COVERAGE

Entire product against manufacturing defects (i.e., a flaw in the product design, materials or workmanship that causes the product to no longer function)..................................**Lifetime**

All fabric (except laminated shades)...**5 years**

Somfy/Rollease products...**5 years**

NOT COVERED

Normal wear and tear

Any product that fails due to:
• abuse
• exposure to salt air
• improper installation
• accident
• extraordinary use
• improper operation
• alterations
• improper cleaning
• misapplication
• damage from pets/insects
• improper handling
• misuse

Any product that, with the passage of time, has:
• loss of color intensity

Costs associated with:
• product removal
• transportation to and from the retailer
• brand label removal
• product remeasure
• incidental or consequential damages
• product reinstallation
• shipping

In the event there are multiple shades in the same room, only the defective shade will be replaced.

If damage occurred during shipping, call 1-866-753-1113 and report within 14 calendar days or else you may be denied credit for your damaged product.

Any unauthorized returns will not be accepted.

THIS SHALL BE YOUR SOLE REMEDY UNDER THIS LIMITED WARRANTY.

If this product is found to have a manufacturing defect in materials or workmanship, we will (at our discretion) do one of the following:
• repair the product
• replace the product
• refund the cost of the product
• Colors vary from lot to lot and may not exactly match sample swatch or previous purchases.
• Discontinued items or color selections will be replaced with the closest equivalent current product.

This lifetime limited warranty gives you specific legal rights, and you may have other rights, which vary from state to state. Some states do not allow limitations on how long a warranty lasts, so the above limitations may not apply to you. No agent, representative, dealer, or unauthorized employee has the authority to increase or alter the obligation of this warranty. This lifetime limited warranty supersedes any previous versions.
