

Vero Beach Orchid Society

February 2017

February Speaker

Our February speaker is Ken Russ, who together with his wife Judy and will be speaking on "Orchid Tips & Tricks". Ken & Judy have been growing orchids for more than 20 years and have become multiple AOS award winners. They reside on a waterway in Port Saint Lucie, FL which they affectionately refer to as "The Puddle." Here they grow approximately 800 orchids, in a shade house, lanai and in a shaded "pine forest."

After so many years of growing orchids Ken and Judy realized there was a need to share their orchid growing knowledge with all level of orchid growers so they decided to create some innovative and practical presentations for orchid growers to perfect the art of orchid growing.

February in Your Orchid Collection

February Climate Data

Average high: 77.7 Average low: 60.7 Average mean: 69.1 Average rainfall: 2.07"

Despite the bloom on the avocados and the burgeoning new leaves on the live oaks, February is not spring in South Florida. Danger of freeze continues past mid month and frost can occur still into March. Even if the weather is balmy, it's too early to let down our guard or take down any protection we have mounted against the cold. The trend however is toward the positive as each lengthening day brings extra hours of warming sunshine to begin waking our plants from their long winter's rest.

February characteristically brings a wide swing of day to night temperatures, ideal for spiking ascocencelas and vandas but also wringing from the air heavy dews and dense fog. Whilst these add a romantic atmosphere to the South Florida landscape, Wuthering Heights is singularly devoid of snails

and slugs (much less Botrytis). The silvery carpet of dew provides a silky path to our orchids for snails and slugs which can range far, under these favorable conditions. They are eager to make a nice meal of your Phalaenopsis leaves or the soft crowns of your vandas before they retire during the dry months of March and April only to dream of the fresh shoots of the sympodial orchids brought forth by the first rains of May. Now is the time to give them a rude awakening. Remember that snail bait is most effectively applied lightly (scatter the pellets every few feet) and frequently (every 7 to 10 days). Two or three applications should do the job.

The heavy fog which can cause condensation on leaves even under cover can also bring trouble. Botrytis is a fungus disease that can disfigure flowers with small black spots. Particularly apparent and annoying on white Phalaenopsis, Botrytis can ruin other flowers as well. Control is typically achieved in commercial greenhouses with fungicide in aerosol forms and by running fans to prevent condensation on the flowers. The latter option is also available to collectors. A small fan turned on the spiking and opened flowers at night will greatly alleviate the pressure of Botrytis. So will, to a degree, the application of soap which we suggested in January to control mites. Bicarbonate of soda, ordinary baking soda, at 1 tbsp per gal will help as well. Quaternary ammonium compounds (Physon, RD40, Consan, pool algicide) also give some control. Maintaining long lasting flowers like Phalaenopsis, dendrobiums and bi-foliolate cattleyas in more perfect condition is well worth the effort. Having waited so long for the flowers we want to enjoy them as long as possible and they do all last longer in cool weather.

The lower overall temperatures of February call for less frequent and lighter applications of fertilizer as was the practice in January. If any reddening of the foliage persists, another application of Epsom salts (1 tbsp per gal), preferably in combination with potassium nitrate, is called for. Nitrate nitrogen is more available to the plants under cooler conditions than ammoniacal nitrogen. If your resolve holds steady not to water (or above all) fertilize those Himalayan dendrobiums, your reward may shortly become evident in bursting flower spikes.

Like the avocados and the live oaks, many cattleyas and other sympodial orchids have bloomed and are just commencing new growth in February. Right after flowering is usually an excellent time for repotting from the plant's perspective and the cool day time temperatures in the greenhouse are hospitable to the orchid grower as well. It's still a bit early to re-basket vandas, but an early start on the cattleyas will allow plenty of time and energy for those spring chores which are right around the corner. With that thought setting out to secure a good supply of pots in anticipation of the potting season ahead is on February's agenda.

Tasks for February

- Spread snail bait lightly. Spread again lightly in two weeks
 - Spray for Botrytis using Florida recommended fungicides or Bicarbonate of soda
 - Begin Spring potting
 - Watch for mites.
-

Editors Notes:

We'd like to extend our thanks to Jeff Adkins. For those of you who missed his talk, you lost out on a very entertaining, informative presentation.

At the beginning of next month, we will be setting up a display at the Martin County Orchid Society

Show. If anyone would like to join us to help or allow us to use your plants, please contact Sherry Cauley, at 772-321-6614. Sherry is the "Away Show" Chairperson. Between Sherry and the other "away team" members, we can make arrangements to pick up and return any plants, and provide information for those willing to assist.

This month's meeting is the last time this year to pay your dues to remain current in your membership. If you can't make it to this meeting, you can send your dues to the Post Office Box listed below.

VERO BEACH ORCHID SOCIETY OFFICERS

President – John Odom	Board of Directors	Committees
Vice President – Sherry Cauley	Doug Mew	Membership –
Secretary – Joan Kaser	Howard Kramer	Hospitality –
Treasurer – Addison Marvin	Pat Mills	Sunshine – Louise Martin

Show Chairman – Carol Marvin	Newsletter Editor – Carolyn Greene
