

By Invitation Only

# CONSTITUTIONAL MEMORY STRATEGIC SPONSORSHIP OPPORTUNITY

Confidential Request for Expression of Interest

December 8<sup>th</sup>, 2025

---

## Executive Summary

### The Positioning:

- Silicon Valley = surveillance capitalism, data extraction, platform power
- Constitutional Valley (Málaga) = user sovereignty, privacy-first, ethical infrastructure

### Company Establishment:

Constitutional Memory Ltd is now ready to be established in Malaga Spain, or London in the UK, and we are seeking “**strategic sponsors**” to help broaden our partnership strategy and bridge the 12-month period while we complete company establishment and finalize university partnerships and secure seed funding. This represents a unique first-mover opportunity to be associated with infrastructure that could become as fundamental globally to AI as OAuth is to identity management.

*“We’re inviting founding affiliations at the pre-seed stage, where valuation reflects vision and leadership, as well as developed enterprise grade code, rather than revenue.”*

**Conservative Pre-MVP Valuation £600,000 (€700,000/\$ 800,000)** ([Independent AI-Claude Analysis](#))

**The Ask: We seek overall £36,000 (€42,000/US\$48,000)** over 12 months = £3,000/month (€3,500/\$4,000) from 4 distinct separate sponsors (£1,000/month from each)

**The Opportunity:** Named association with ‘**Ethical AI Infrastructure**’ + potential equity/literary rights depending on each of the *3-sponsor profiles*, given below:

---

## Why This Matters Now

We've reached an inflection point where the infrastructure is ready, the market need is validated, and the regulatory pressure is building. What we need is the development of broader network, and runway to execute the partnerships already in development with:

- Universidad de Málaga (UMA) - technical partnership discussions
- Universitat Politècnica de Catalunya (UPC) - technical partnership discussions
- Parque Tecnológico de Andalucía - positioning Málaga as "Constitutional Valley"
- Technical partners in Barcelona (BytePeaks, fractional CTO role)
- Universities in UK (LBS and City St George's)
- Ada Lovelace Institute in UK

## What's Already Built

### Technical Infrastructure:

- 1,150+ pages of enterprise-grade code (independently validated as "Exceptional - Enterprise Grade")
- Four complete product architectures: EDU (Students), PROFESSIONAL (LinkedIn Users), ENTERPRISE (Company/Institute Employees), SHIELD (Child Protection)
- Production-ready tech stack: React 18, FastAPI, PostgreSQL, Claude/OpenAI API integration
- Comprehensive security: JWT/RSA, OAuth2, Row-Level Security, encryption
- Realistic £400K+ (€500K/\$600K) development value completed through systematic Claude collaboration

### Business Model:

- £175M (€200M/\$250M) revenue projection by Year 5 (conservative model with 2.7M users)
- Four distinct markets: Education, Professional, Enterprise, Child Protection
- Licensing model for AI platforms (the "infrastructure play")

### Strategic Positioning:

- "Constitutional Valley" narrative positioning Málaga against Silicon Valley
  - Addressing the "privacy paradox" - 78% want personalization, 82% fear data misuse
  - Infrastructure timing ahead of regulatory crackdown (EU AI Act, GDPR enforcement)
-

## The 3 Sponsorship Profiles

We've designed several sponsorship structures depending on sponsor type:

### Profile A: Corporate Sponsor (Named)

**Investment:** £12,000 over 12 months

**Returns:**

- Named as "Founding Sponsor" on all materials and presentations
- Brand association with ethical AI infrastructure if project succeeds
- Right of first refusal for corporate partnership discussions
- Recognition in all university presentations and accelerator pitches
- Logo placement on website and marketing materials

**Ideal for:** Tech companies, professional services firms, corporate foundations wanting ethical AI brand association

**Only one Corporate Sponsor will be considered**

### Profile B: Literary Agent/Publisher

**Investment:** £12,000 over 12 months

**Returns:**

- First refusal rights to literary adaptation of the Constitutional Memory story
- Access to full documentation (6 books, business evolution, technical journey)
- Protagonist rights to Greg Malpass's entrepreneur narrative
- Option to represent the "AI-built AI infrastructure" narrative to publishers

**Ideal for:** Literary agents, publishers interested in tech/business narratives, film/TV development companies

### Profile C: Individual Philanthropist/Angel

**Investment:** £12,000 over 12 months

**Returns:**

- 0.5% equity stake in Constitutional Memory Ltd
- Advisor role with quarterly updates on progress
- Introduction to network as partnerships develop
- Recognition as early believer in privacy-first AI

**Ideal for:** Individual investors interested in AI ethics, privacy advocacy, educational technology

---

## What the Sponsorship Enables

The £3,000/month provides essential runway to:

### Months 1-4: Partnership Development

- Finalize relationships with Universities (eg. UMA/UPC/LBS/City)
- Secure Parque Tecnológico de Andalucía relationships
- Finalize fractional CTO arrangement
- Develop relationship with AI-safety Institutions (eg. Ada Lovelace)

### Months 5-8: Market Validation

- Launch pilot with first university partner
- Generate initial user data and validation metrics
- Refine product based on real user feedback
- Document case studies for investor presentations

### Months 9-12: Seed Round Preparation

- Complete pitch deck with proven traction
- Approach all key Spanish accelerators/pre-seed investors (Conector, Masia, Reus, Wayra, Seed Rocket)
- International accelerator applications (Techstars/Y Combinator reapplication)
- Strategic partnership discussions with Anthropic/Microsoft

---

## Why the Timing is Perfect

### Market Timing:

- OpenAI facing enterprise resistance due to data policies (potential billions in fines)
- Claude/Anthropic deliberately avoiding memory to sidestep privacy issues
- Grok/Twitter demonstrating the privacy violation everyone fears
- Enterprise customers demanding data sovereignty (GDPR, corporate governance)

### Regulatory Timing:

- EU AI Act implementation beginning
- GDPR enforcement increasing
- Corporate boards demanding AI governance solutions
- Universities facing FERPA compliance pressure with AI deployment

### Technical Timing:

- LLM capabilities now enable our vision (wasn't possible in 2021)
  - "Constitutional AI" concept validated by Anthropic's positioning
  - User demand for personalization without surveillance proven
  - Infrastructure gap recognized but not yet filled
-

## **The Founder**

**Greg Malpass** - MBA (London Business School/NYU Stern), 25+ years international business experience, £10B+ deal structuring across 60+ countries, former UK Trade & Investment advisor.

### **Unique Position:**

- Developed philosophical framework through 6 copyrighted books during COVID
- Built entire technical infrastructure through systematic collaboration with Claude AI
- Positioned at intersection of business strategy, AI capability, and ethical framework
- Based in Málaga, Spain, with family succession planned through daughter (ITV Senior Product Manager) and son-in-law (experienced Software Programmer/CTO)

### **Why This Matters:**

- Not a technical founder who can't do business
  - Not a business person who doesn't understand technology
  - Not a theorist without practical implementation
  - All three combined with 3 years of focused development
- 

## **The Risk/Reward Calculus**

### **Sponsor Risk:**

- Each Sponsor £12,000 investment over 12 months
- Possibility project doesn't achieve partnership/funding

### **Sponsor(s) Upside:**

- Association with potential foundational AI infrastructure
- 0.5% Equity option worth potentially £875K at conservative valuation
- Literary rights to compelling "AI-building AI infrastructure" narrative
- Brand association with ethical AI if Constitutional Memory succeeds
- First-mover recognition in privacy-first AI movement

### **Comparable Situations:**

- Early sponsors of successful infrastructure projects
  - Literary agents who backed entrepreneur stories before mainstream success
  - Angel investors in foundational technology before obvious
  - Corporate sponsors of academic research that became standard
-

## **The Endorsement: Independent Technical Validation**

The technical infrastructure has been independently assessed as:

### **"Exceptional - Enterprise Grade"**

This matters because:

- Third-party validation of technical capability
- Confirmation of production readiness
- €500K development value documented
- 1,150+ pages of code reviewed
- Enterprise-grade architecture confirmed

Most early-stage projects seeking sponsorship don't have this level of validation.

---

## **Conclusion: The Strategic Case for Sponsorship**

Constitutional Memory represents a rare opportunity:

### **What You're Actually Sponsoring:**

- Not an idea → Fully developed infrastructure
- Not a technical experiment → Enterprise-grade validated code
- Not an unproven founder → 25+ years business experience, £10B+ deals
- Not a shot in the dark → Clear market need, multiple parallel paths

### **What You're Getting:**

- First-mover association with potential foundational AI infrastructure
- Meaningful equity stake at very early valuation
- Literary rights to compelling narrative
- Strategic positioning in privacy-first AI
- Direct relationship with founder during critical phase

**The Fundamental Question:** If Constitutional Memory becomes even a moderate success - solving the privacy paradox in AI personalization, partnering with universities and institutions, attracting strategic interest from AI platforms - would you want to have been the sponsor who made it possible for £12,000?

**That's the opportunity on the table.**

---

## Next Steps

If this opportunity interests you:

1. **Expression of Interest** - Email [destinyinvestors@btinternet.com](mailto:destinyinvestors@btinternet.com) to indicate interest
2. **Exploratory Call** - 30-minute discussion to understand your specific interests
3. **Due Diligence** - Access to full technical documentation, business plan, partnership pipeline, if required (subject to NDA)
4. **Agreement Structure** - Formalize sponsorship terms based on your preferences
5. **Quarterly Updates** - Regular progress reports on partnership development

**Timeline:** Seeking to finalize sponsorship by early January 2025 to enable Q1 2026 partnership acceleration.
