WAX V.S SUGARING OR THREADING ?

Everyone's preference is different...We customize your treatment to suit your skincare needs. We recommend discussing your hair removal options with our skin care professionals. We offer the finest European Wax made for sensitive skin as well as Organic Sugar Wax to remove unwanted hair.

WHAT IS SUGARING ?

Sugaring hair removal, is an ancient middle eastern practice using an all natural paste or gel made from food derived ingredients, 100% Pure and Organic Sugar (no wax / no chemicals). Our Sugaring Procedure is pulled off in the same direction of hair growth opposite to the waxing which is against the direction of hair growth so that it makes sugaring

- Less Painful, Less Irritating
- Hydrating and Antiseptic
- No sticky wax residue is left behind
- Only takes away unwanted hair and dead skin cells
- Results can last up to six weeks

WHY THREADING OVER WAXING ?

Threading is an ancient method of hair removal originating in the Eastern world. In most recent times it has gained popularity in Western countries. Threading is preferred hair removal technique for a number of reasons. As opposed to waxing, the top layer of skin are not peeled or traumatized in the process making threading gentler on the skin. Threading is highly recommended and an excellent option for those who use (Glycolic, Microdermabrasion Peel, Retin-A, Renova, Accutane, or similar products)

HOW DOES THREADING WORK ?

Threading is a hair removal technique that uses 100% anti-bacterial cotton thread. The cotton thread is twisted and rolled along the surface of the skin entwining the hairs in the thread, which are then lifted quickly from the follicle. It is more precise than waxing and allows for better lines.

WAXING BEFORE AND AFTERCARE INSTRUCTION

- Make sure your hair is trimmed and about 1/4 inch in length to ensure no excessive "pulling" is needed,"
- 30-60 minutes Acetaminophen (Tylenol) is the better choice over ibuprofen (Advil), but either will help take the edge off. Apparently ibuprofen does prolong bleeding, and is not recommended before a more invasive procedure. Bleeding from waxing treatments is usually minimal, if at all, so it really doesn't matter which pain medication you take before being treated. Acetaminophen does not prolong bleeding time so it would always be the better choice if you're concerned.
- "Topical anesthesia with 4% lidocaine can help take the edge off. You can ask your physician to prescribe it, and make sure you put in on 45 minutes prior to the procedure.
- Regular face washing exfoliates the face for eyebrow waxes, but prior to leg, bikini, or anywhere else below the neck, make sure to use a body scrub at least a few hours beforehand. By removing the dead skin cells you provide an easier exit for the hair.
- High acidity in your body can make skin more sensitive. Refrain from caffeine and alcohol for at least 3 hours before your wax. Drink lots of water, and maybe pop a few antacids like TUMS 20 minutes prior.
- We do not recommend any person to make a body sugaring or waxing appointment less than 48 hours over-exfoliated skin using (Glycolic, Microdermabrasion Peel, Dermaplaning, microneedling, Retinol A, Renova, Accutane or similar products) to avoid trauma or discoloration of the skin.
- We recommend you do not wax 48 hours before or after sun exposure and always protect your skin with Sunscreen SPF 30 or Sunblock after treatment.
