Utility Model Paten: 2023201010787

Operating procedure:

Press the red brake pedal to lock all four wheels (green pedal to release).

Rotate the right handle backward to open the footrest (forward to close).

Recline the backrest to 170° by adjusting the lever (re-adjust to return upright).

①

②

③

Step on the pedal to achieve the negative-angle position (step again to restore).

Pull the side release lever to open the left armrest for patient assistance.

The rear handle allows easy pushing and maneuvering.

Pull out the footboard when returning the chair upright to support the patient's feet.

④

⑤

⑥

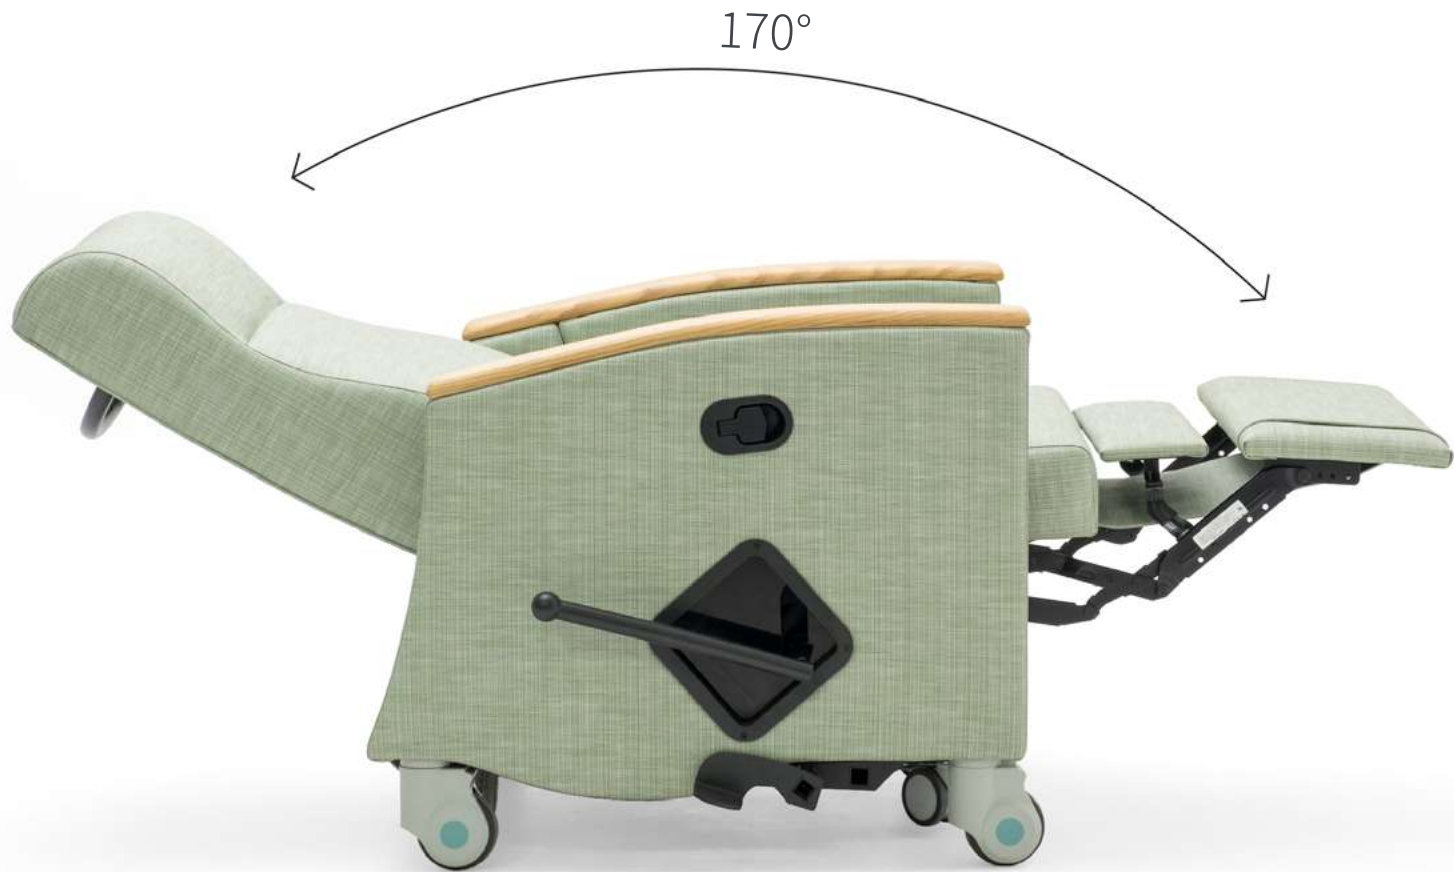

⑦

1. Centralized braking system allows one-step locking of all four wheels for safe and easy patient transfer.
2. The backrest reclines up to 160° , and the footrest extends to a flat position, meeting the needs of medical examination and treatment.
3. The entire chair can tilt to a negative angle (legs higher than head) for leg wound care or treatment convenience.
4. Left armrest can be folded down for caregivers to assist patients when getting on or off the chair.
5. A retractable front foot board provides leg support during transfer.This versatile chair supports medical consultation, wound care, mobility, infusion, patient transfer, and family companion use, ideal for special care wards.

03

First waiting area

The waiting area provides waiting and rest services for patients upon admission, and is generally located in the lobby or near charging or registration areas. As the first contact for patients upon admission and waiting, it not only provides them with waiting and rest, but also serves as a "facade responsibility" for the hospital and a symbol of its comprehensive strength.

First waiting area

One wait (registration fee collection medication waiting)
High traffic volume (product durability requirements are extremely high) and short waiting times.

First waiting area

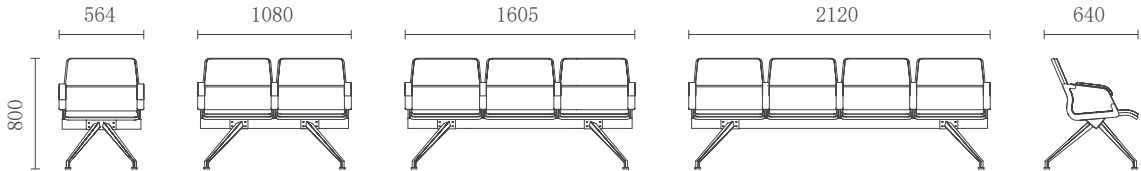

Patent: 202030384604.7

LJ-H528

Specially designed for the hospital waiting area, it breaks the cold and rigid impression of traditional "airport chairs" and perfectly integrates various materials such as steel, wood, and PU. It not only meets the basic elements of safe and stable hospital furniture, but also maintains warmth and comfort!

EXAMINATION ROOM

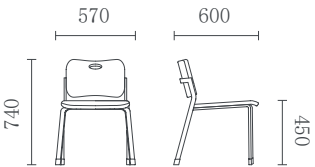

Examination and consultation rooms are places where hospitals and patients directly communicate, conduct preliminary examinations and diagnoses, and complete diagnosis records. Patients hope to receive clear diagnostic results and satisfactory treatment plans, and should create a friendly, pleasant, and relatively private diagnosis and treatment environment. The consultation room belongs to a small and quiet area relative to the waiting area. The configuration and design of furniture such as diagnosis tables, patient chairs, doctor seats, hand washing counters, and treatment beds should prioritize doctors completing diagnosis and examination through the shortest path to make their work more efficient.

Doctor chair

The whole seat is designed according to the ergonomic principle, providing good support for the waist and back, and alleviating the fatigue brought by long hours of work. The cushion and backrest are designed to conform to the curve of the human body, providing a comfortable feeling of sitting and improving the work efficiency and comfort of medical staff. The seat and backrest are made of professional medical leather with excellent wear resistance and antibacterial properties.

Doctor chair

The product is designed according to ergonomics as a whole, with a backrest tilted at 35° and fitted to the back. The backrest is designed in a circular arc shape, which is reliable for use as a back, hand, and writing pad. It can meet various application scenarios such as meetings, consultations, and negotiations.

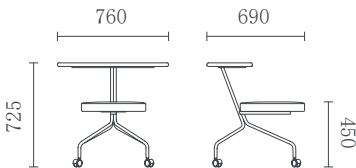

The semicircular backrest paired with a unique four-leg design can serve as a cushioned back support or be used as a tray for patients during infusion or blood draws, truly achieving multi-scenario use with a single item.

LJ-RY0080-1

The hardboard can be used as a backrest or as a writing board during meetings.

LJ-RY0080

Nurse station chair

LJ-TY0011

LJ-TY0010

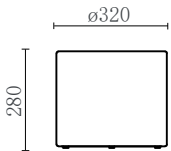

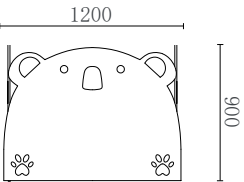

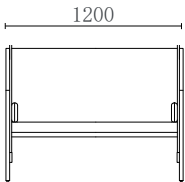

Children's infusion sofa

The cartoon appearance design, along with bright colored fabrics, can attract the attention of young patients, alleviate discomfort symptoms, and prevent hyperactivity in children, thus helping medical staff to carry out their treatment work smoothly. The booth-style setup helps to create a small private space, where a child's crying will not affect others, and the specific dimensions are just right for parents to accompany their children.

LJ-RY0151

LJ-FY0172

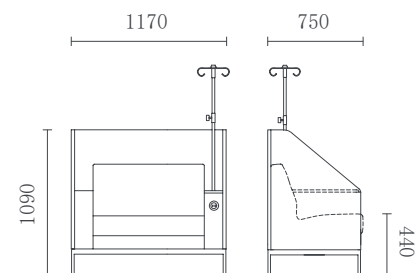

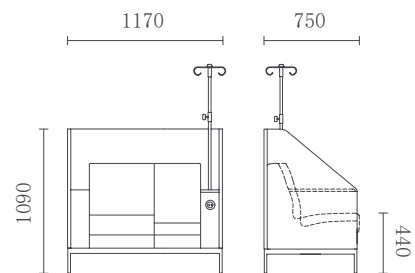

Children's infusion sofa

LJ-FY0068-1

LJ-FY0068-2

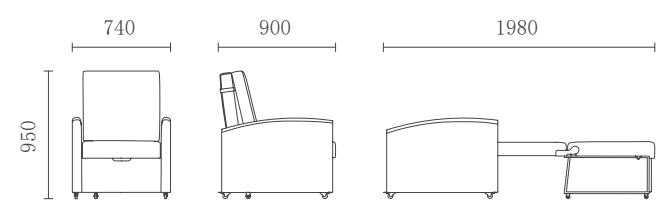

Child care sofa

LJ-FY0015

Multi functional design, used as a sofa when folded up and as a nursing bed when needed, maximizes the limited space utilization of the hospital.

The inner frame adopts a three-level pull-out structure. The armrest is designed with a circular arc, and the stitching is located on the periphery of the armrest, making it wear-resistant, easy to clean, and durable! Rich color combinations are suitable for accompanying children's wards.

09

Laboratory

The experimental and laboratory space is a systematic space containing multiple functions and work modes, which requires an efficient spatial layout. The Aobin Lingjie Medical Care System provides a flexible and orderly space for experimental and laboratory systems. It can be flexibly and reasonably configured according to the layout of the hospital space and the basic hospital feeling operation process of "picking, dispensing, washing, and storing", providing staff with a simple and convenient route of operation.

10

Chinese medicine
Age-friendly

Simple and elegant colors and soft shapes greatly reduce patients' impatience and anxiety, meeting the "comfort" needs of doctors and patients in the space. The curve of the arc and multi-level dimensions can serve patients in a 360 degree all-round manner, demonstrating the service concept of "serving people with harmony" in medical care.

Reception sofa

The soft bag is designed with high-quality white wax wood structure to minimize all safety hazards, and the armrest is designed to tilt forward, which is helpful for patients with mobility difficulties. Therefore, it is suitable for waiting in areas such as pediatrics, rehabilitation, oncology, and elderly care centers!

(Middle armrest can be added to avoid excessive use of public resources)

Reception sofa

The simple design and minimal stitching of the car threads make it easy to clean and not easy to hide dirt, meeting the requirements of the courtyard.

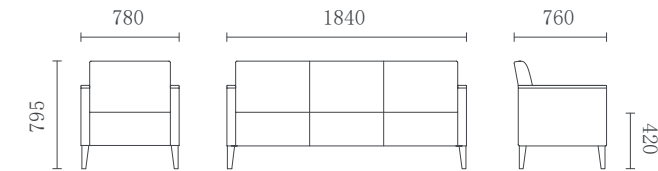

The white wax wood armrest surface enhances the product's texture. Applicable to administrative areas of hospitals such as doctors' offices and outpatient clinics.

Reception sofa

LJ-RY0119

The soft package combined with a wooden structure design minimizes all safety hazards as much as possible. Additionally, the design of the handrail's curvature provides assistance for patients with limited mobility. Therefore, it is suitable for waiting areas in pediatrics, rehabilitation, oncology, and elder care centers!
