

High Head Displacement (Fill) Pump

This style of pump is used for filling a pipeline with water prior to performing a Hydrotest. This tier of fill pump is best used for applications needing to overcome large changes in elevation while maintaining optimum flowrate.

This unit Requires one of our trained operators to safely be used. Please consider this when renting that an operator must also be sent out with this unit.

(150-600) PSI
(1500) GPM

This unit is intended for high head displacement operations (high elevation differential systems) Capable of overcoming up to 1,400 ft of head.

This Unit Requires an additional Feed Pump to run at full efficiency and Flowrate.

It all starts with a
phone call.
