Bumper Pull Car Trailer Model 4926

| FEATURE | FUNCTION | BENEFIT |
|----------------------------------|--|---|
| All-Aluminum Construction | Featherlites are made with an all-aluminum frame and skin. | With just routine maintenance, aluminum construction has higher resistance to rust and corrosion and in the long run, they hold their value longer. It's also lighter weight, increasing your payload capacity and making for a smoother tow. |
| Uni-Body Design | All components of the Featherlite trailer from side posts to roof rails to roof bows to cross members are engineered into a uni-body design. | The uni-body design makes the trailer stronger and more durable for the long haul. It also gives you the smoothest pull possible. |
| 4" I-beams on 12" Centers | 4" I-beams run every 12" under the trailer. | Featherlites have a solid support system underneath the trailer for your heavy loads of cargo. |
| Wiring Harness | One-piece wiring harness is standard. | With Featherlite trailers, all wires are bundled in a protective jacket, known as the Featherlite wiring harness. Wire harnesses provide a watertight seal, protect against wire wear and tear and make connecting them to your vehicle easy. Without the harness, the individual wires would hang loose and unprotected. |
| Aerodynamic Nose | Featherlite bumper pulls feature standard aerodynamic noses. | Featherlite v-noses are designed to be more aerodynamic, wind resistant and easier to pull. They are also great looking! |
| Aluminum Floor | Featherlite's smooth extruded aluminum floor is standard. | Durability on the outside is also found on the inside. The aluminum floor is stronger & more durable to last longer through heavy use when hauling your cargo. |
