OKAZ Consultant Engineering is always on the front foot to serve its customers and have great passion to serve them in future with more reliable and valuable services.

OKAZ Consultant Engineering Office does what it says. To serve its customers in a new way now OKAZ Office is coming with the new and unique product "**OKAZ Color Schemer**" which is totally engineered designed software which decides the color schemes and color combinations to be used in the residential, commercial as well as all types of the buildings according to the new and modern architectural aesthetic rules and regulations.

Through this software we will decide to choose the color combinations and color schemes for your building interior, exterior or all the building to make it a unique one. Your building is your valuable asset and we care about it. We will make it more valuable for you through our software.

Now let me to explain a little how we will change your home interior, exterior as well as all the building from lower standard to the valuable standard asset.

Following is the photo of interior designing for a Bed room with existing colors.

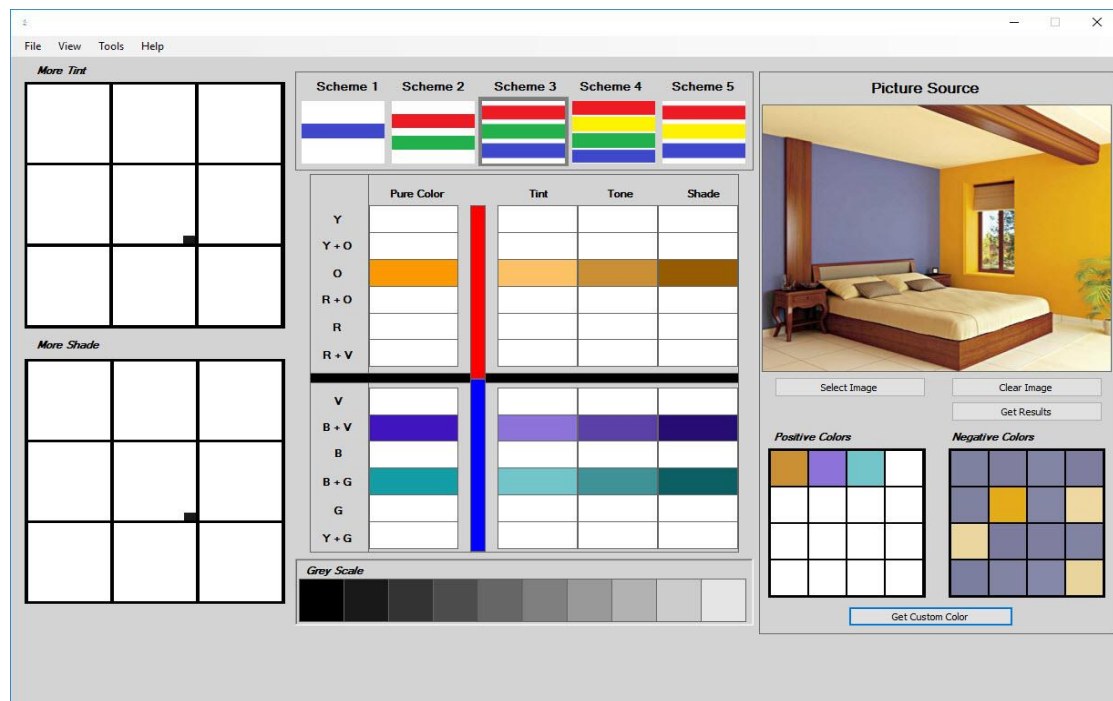

We know that these colors used in the interior of this Bed room are used without any color combination rules and regulations. They are just used as the random or rough colors, there is no sense of color aesthetics or color harmony.

Now we will first analyze this photo through our engineered software "**OKAZ Color Schemer**" and it will decide the color scheme and optimum color combination for this office interior just according to the main existing color.

It is much compulsory to read and analyze the photo and to know the existing colors in the photo and then to decide the color combinations and color schemes according the color harmony principles based on the modern architecture and modern aesthetics.

After the analysis of this photo we have got the following color schemes and combinations to be used for this office interior to make it good looking and valuable for both the owner and the building inmates.

Following is the photo after analysis by our software containing the suggested optimum color schemes and combinations to be used in this Bed room interior.

The already existed colors may be selected randomly because there is no sequence of the color usage in this photo. Somewhere it is using Orange and Brown color and somewhere black and white which makes no sense of the color usage and color combinations.

Now our software has analyzed the existing colors in this photo and have decided best color schemes and color combinations to be used in this living room interior to make it as architectural/aesthetical component. The suggested optimum color combinations are based on the modern architectural color theory. Our software has suggested to use the color combinations of Orange, Blue-Violet and Blue-Green colors and their child-colors (Tint, Tone and Shade) which can make a visual sense. And that is our basic goal to make a building interior, exterior as well as all the building which must give a pleasant visual sense for the building inmates.

Here I want to show you this photo after making a suitable color combination's effect on this Bed room photo.

You must be shocked after looking at this photo that is it the same photo which you have seen before?

Yes! It is the same photo which you have seen earlier, but now it contains the color combinations effects designed/decided by our unique software "**OKAZ Color Schemer**". Here it will not be a wrong if I say that only we have this unique product which will serve you well in the field of interior designing and color schemes for your building.

We are always there to serve you in any aspect of your valuable building to make it worthy for you.
