

**Extreme Pressure Lubrication For
8000+ HP Engines**

**Meticulously Blended for
Nitromethane & Alcohol Fuel
Suspension**

70W RACING OIL

High Performance Race Engine Oils

PRODUCT DESCRIPTION:

CleanBoost 70W Racing Oil™ is specifically blended for nitro-methane and methanol fuel burning engine applications.

CleanBoost 70W Racing Oil™ contains no Solvents, Plastics, Graphites, Borons, Teflons or Chlorines.

CleanBoost 70W Racing Oil™ is engineered to improve initial start-up wear protection and reduce friction providing improved efficiency for 1,000 to 8,000 horsepower engines.

Applications:

CleanBoost 70W Racing Oil™ is meant for any high performance engine designed to use a 70w oil.

BENEFITS:

CleanBoost 70W Racing Oil™ will reduced piston skirt, cylinder wear and bearing deformation are achieved and component life can be extended longer. Visual inspection and oil analysis has proven it.

CleanBoost 70W Racing Oil™ will reduced oxidation in the oil which will allow for longer engine and component life, particularly when cylinder wash-down occurs.

CleanBoost 70W Racing Oil™ is designed to treat and protect the moving parts of an internal engine creating an extreme pressure boundary layer between moving parts with as much as 10-times the leading oil's a film strength being used in today's racing market.

CleanBoost 70W Racing Oil™ forming a covalent, galvanic bond to the metal allowing a 2 to 4 micron penetration into the metal, creating less friction and heat.

Racing teams agree, when using **CleanBoost 70W Racing Oil™** that oil pressure is maintained, there is virtually no oil foaming and engine parts look like new after a round of racing. Check out our YouTube CleanBoost Oils testimonials.
