PUDENDAL NERVE BLOCK FOR POST-OPERATIVE ANALGESIA			
☐ Independent Trained Observer Present			
☐ The purpose and indication for the regional anesthesia of the pudendal nerve, is for postoperative analgesia.			
☐ Modifier -59is required to distinguish the nerve block from the intraoperative anesthesia.			
☐ This regional block is as separate from routine postoperative pain management, which consists merely of daily PO			
narcotic analgesia.  The time spent on perioperative placement of the block is separate from, and was not included in any reported anesthesia			
time.	, and was not i	included in any repo	ited allestilesia
☐ PROCEDURE NOTE: Using a transcutaneous perineal approach, the ischial tuberosity is palpated and a 25 gage needle			
was introduced slightly medial to the tuberosity. The needle is advanced approximately 2.5 cm. Aspiration was			
performed to ensure that the needle is not in a blood vessel and then the anesthetic is injected. The needle is withdrawn			
and directed into the deep superficial tissue of the anus and anesthetic is again injected to block the perineal, inferior			
rectal, ilioinguinal, and genitofemoral components of the pudendal nerv	e. → □ Th	is was repeated on t	he opposite side.
☐ During the injection procedure, this patient was monitored with pulse on	vimetry pulse	rate and blood pres	sure by other
qualified trained observer(s) in the operating room. The motor response			
otherwise stated below:	auring one mj	vousii was nogingisi	<b>0, 0.1110</b> 55
