

BRIDGE PLUGS & CEMENT RETAINERS

BARRACUDA OIL TOOLS, LLC

WIRELINE SETTING TOOL

The Barracuda #05, #10, and #20 Wireline Setting Tools utilize the ignition and burning of a pyrotechnic power charge to produce gas pressure that elongates the tool. This provides the stroke and force necessary to set and anchor Barracuda bridge plugs and cement retainers. Setting Sleeves and Wireline Adapter Kits are also available to adapt the Settings Tools to most of the plugs and retainers found on the market today.

Wireline Setting Tools may be pre-filled with oil at the Barracuda Oil Tools locations, for temperature-specific applications.

FEATURES

- Used to set Barracuda Bridge Plugs & Cement Retainers on wireline
- Adapters available for compatibility with most available tools
- Fast running capability on wireline
- Proven, industry-standard design
- For setting tools from 2-3/8 tubing up to large casing

Size	Setting Force (lbs)	Tool OD	Tool Length
