

Front Range LED Lighting

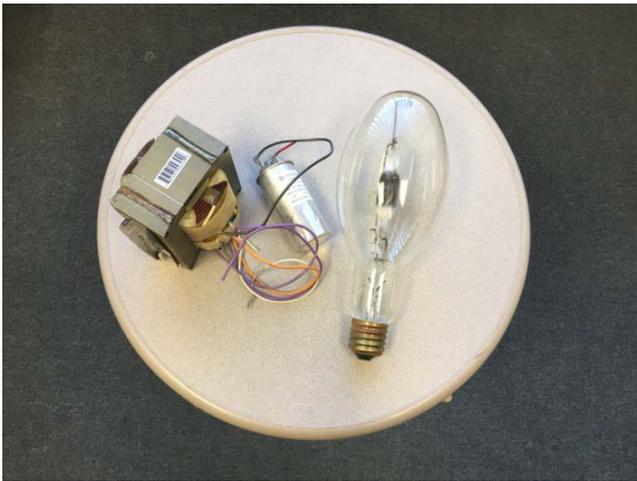

What we offer our customers:

1. Energy Savings on lighting of up to 90%
 - a. LED lights use only about 10% of the energy that regular (incandescent) light bulbs use.
 - b. Most commercial properties use fluorescent tubes or other lighting types that require the use of a ballast or transformer that changes the voltage for that type of lighting. These ballasts use energy, will eventually fail and can produce an annoying buzz.
 - c. When these types of lighting are replaced with LED lights, the customer can reduce their electric usage by 50% to 300% depending on the type.
 - d. We bypass the ballasts and install LED lamps that are wired directly to the building electric, so that the only component that can fail is the LED lamp itself which are expected to last over 10 years.
2. Extremely low maintenance costs (often none)
 - a. Since LED lamps last so long, you “never” (over 10 years) have to change a light bulb.
3. Keep your existing fixtures -- just update the lamps
 - a. The customer can keep all of their existing light fixtures – we “retrofit” them with new LED lamps.
4. Local utilities offer rebates of up to 50% of installation cost.
 - a. The energy companies encourage people to use less energy to avoid the need to expand their capacity (very costly), by offering rebates based on how much energy the customer can save.
5. Improved light quality.
 - a. LEDs produce light that is very uniform and brighter than conventional lights.
6. Lamp warranties of up to 10 years.
 - a. Front Range LED Lighting offers a 5 year warranty for all of its lamps, and in some cases, the manufacturer offers up to 10 years.
7. Payback is normally less than 24 months
 - a. The money that the customer saves on energy after installing LED lights is typically enough to recover their cost in under 2 years, often less.
8. We offer financing that allows the customer to upgrade to LED with ZERO out-of-pocket expense and net positive cash flow after factoring in monthly utility savings.
 - a. Front Range LED Lighting offers financing that will pay for the entire cost of installation, leaving the customer with monthly payments that are less than the savings that they see on their utility bill.

Our LED lighting services include a comprehensive turnkey solution to almost any interior or exterior LED lighting retrofit. Our Services include:

- Free On-site lighting survey audits
- LED product consultation, evaluation and supply
- LED ROI analysis - covering energy, maintenance and environmental savings
- EPA worksheet showing an estimate of the increase in building value after your upgrade
- LED rebate sourcing assistance
- LED retrofit installation
