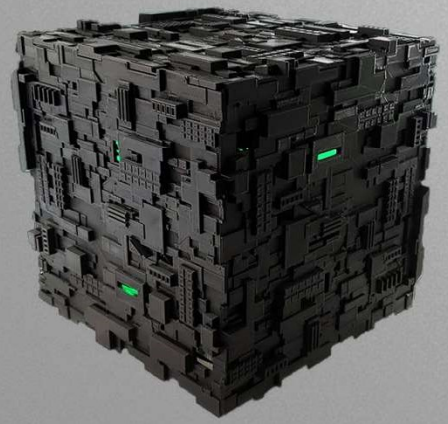
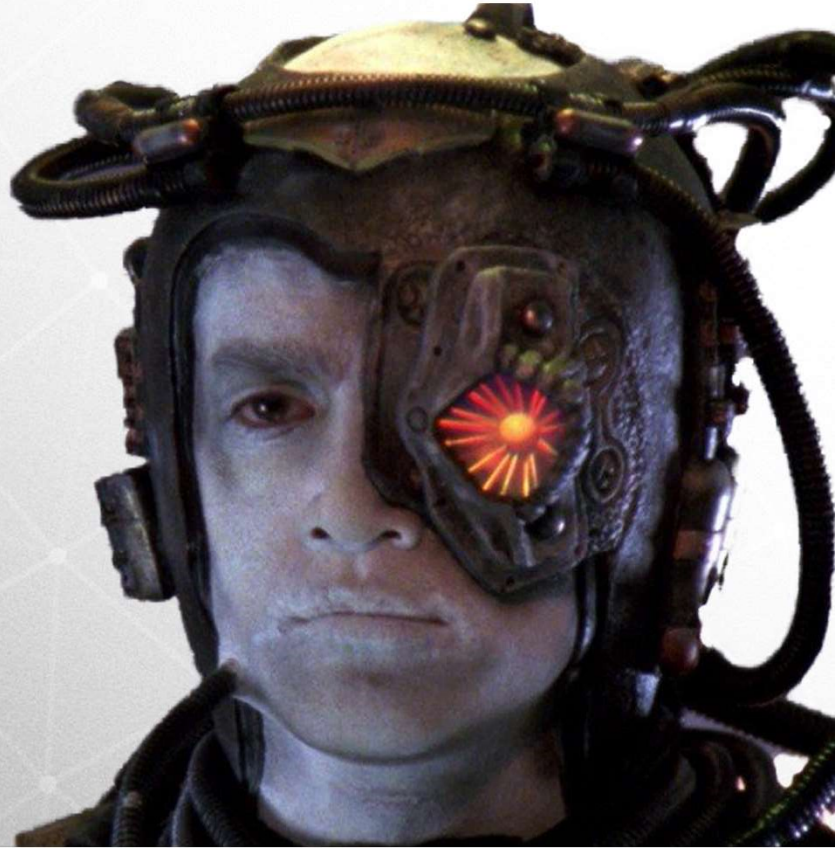
DE BOURGH

Welcome to the COLLECTIVE of Access Control storage technology.

iTRUST® by monitor dynamics

aperio™ Wireless lock technology

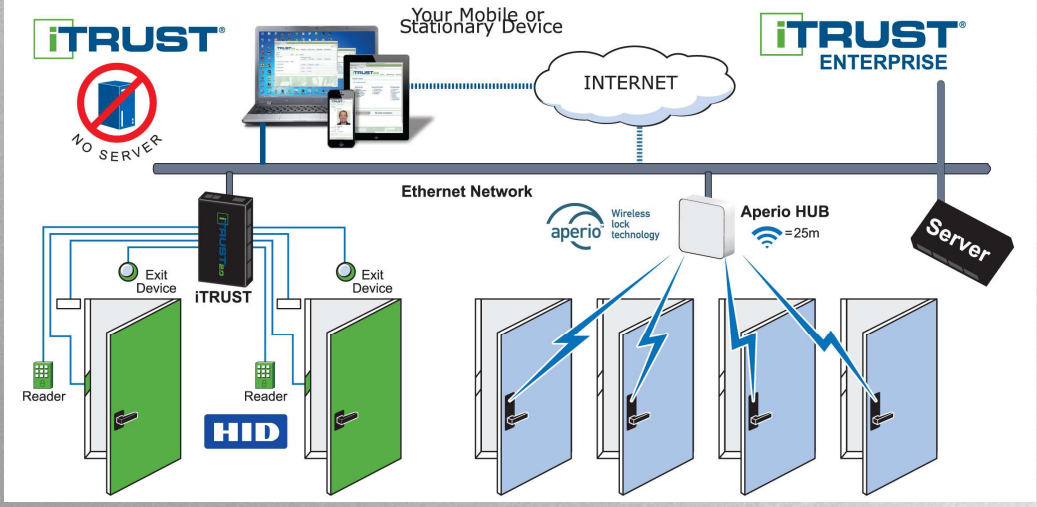




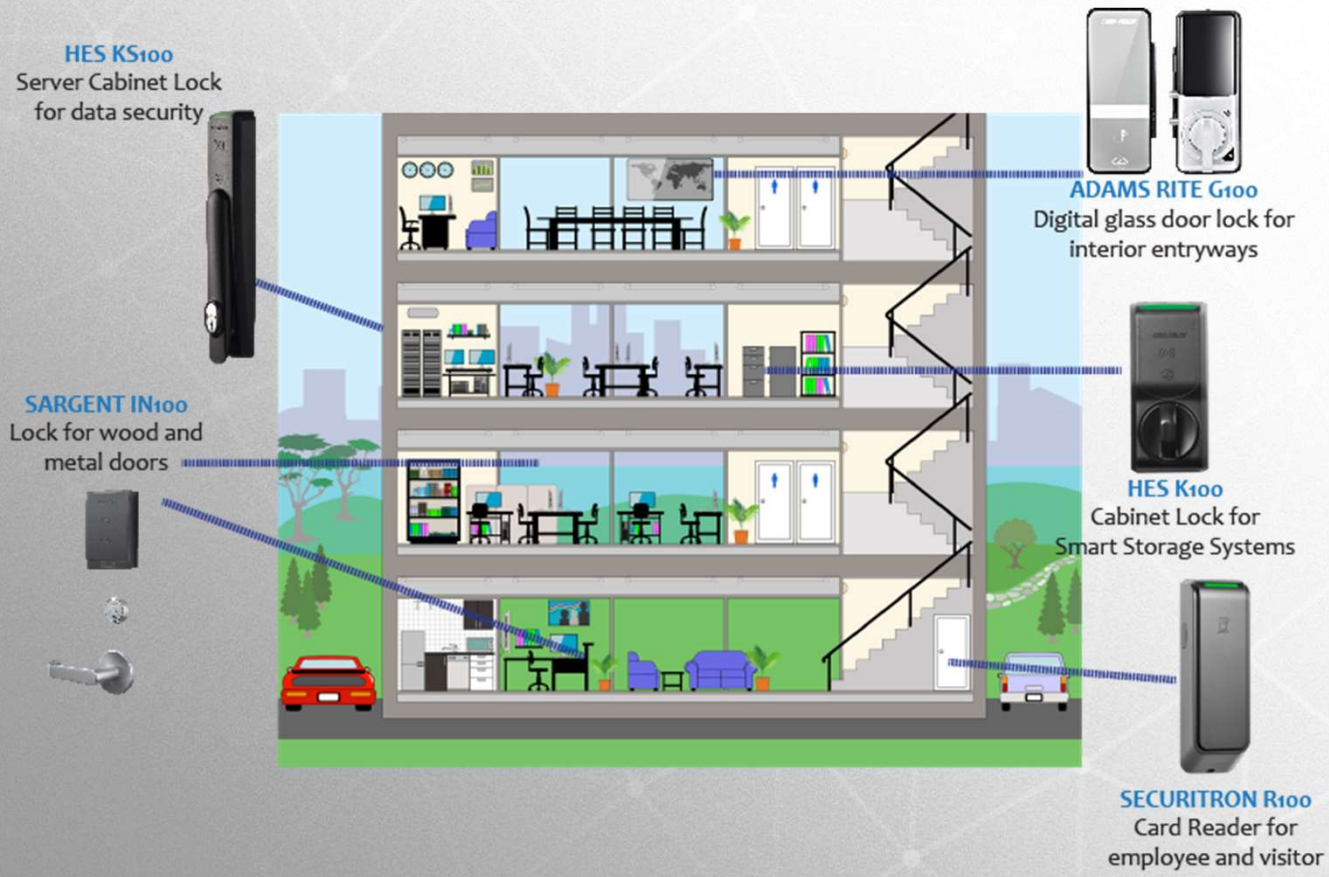
The COLLECTIVE of Access Control storage technology is comprised of Monitor Dynamics' iTRUST access control technology, DE BOURGH Manufacturing storage products and Aperio Wireless Lock Technology by ASSA ABLOY.

This COLLECTIVE allows facilities to implement smart storage with the latest security technology.

At the center of the COLLECTIVE is iTRUST access control technology which may be implemented by itself or in conjunction with most access control systems. Credentials are assigned at the time of card enrollment ensuring authorized access control is in place for designated storage lockers and points of entry.



The complete line of Aperio Wireless Lock are compatible within the COLLECTIVE.



The COLLECTIVE partnership offers custom solutions for all facility storage needs while ensuring the strictest security standards are implemented.

OCCUPIED

How to Get a Locker:

1. Find a locker on the screen that is available.
2. Present your EY badge to that lock and turn the knob to open when the light flashes green.
3. Put your belongings inside and close the door.
4. To get your belongings out of the locker repeat step two.

Note: Always make sure that the locker shows as occupied if your belongings are in that locker.

LEARNING SPACE LOCKERS

- Open up spaces like hallways for more learning and social interactions.
- Use lockers at counter height or at seat height to establish these spaces while still providing needed storage.
- Separate testing centers may be needed due to ADA expansion.

Slide 39

A5 Author, 5/18/2015

dataTRACER

- Servers and IT equipment are some of your most important assets.
- Oversee access to these important storage systems.
- Eliminate time-consuming key management.
- Generate custom reports to track access and for how long the cabinet was open.
- Give a user or group access to specific systems.

Before

- X Lockers are expensive to buy and maintain.
- X No records of access and traditional lock mechanisms are not intuitive or are used as weapons.
- X No visibility or oversight meant thousands of spaces for potential weapons or contraband.
- X Traditional assigned lockers meant users have to trek back and forth to use the locker, making it an expensive waste of space.
- X No visibility or oversight meant thousands of spaces for potential weapons or contraband.
- X Traditional assigned lockers meant users have to trek back and forth to use the locker, making it an expensive waste of space.

After

- ✓ Technology allows for real time tracking of assets or usage data for the lockers, making decisions on locker needs simple.
- ✓ Integration into access control systems allows users to access lockers throughout the building using their existing credentials and permits administration remote control over access; locking lockers down or opening them all up for search.
- ✓ Having non-assigned lockers means you may need fewer lockers, as students tend to not need a locker each day.
- ✓ Technology integration means no managing keys, scrambling combination locks, or tracking items in spreadsheets.
- ✓ Items like cell phones can be charged and secured inside locker openings, making for distraction-free classrooms.
