ONE SOUL AT A TIME

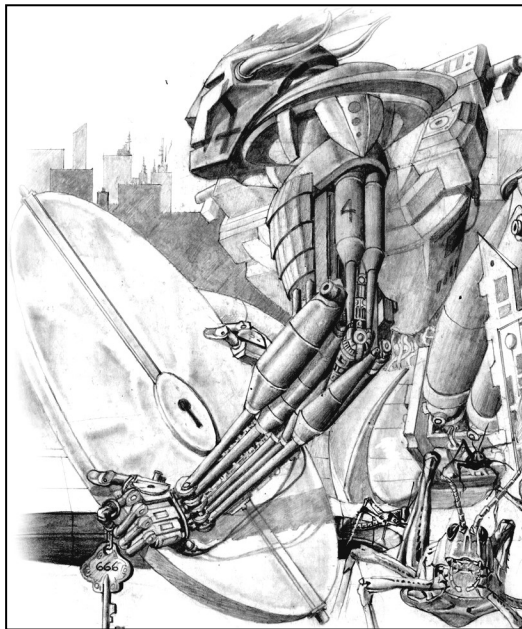

## Bonds to Getting Saved The Deception of AI Technological Comforts

Computer technology has changed the entire world, and today we are completely dependent on computers for the function of civilian life. But, like everything else, the internet has become corrupt in part both by cybercriminals and people with the Spirit of Satan...and this sometimes ignorantly.

The advent of Artificial Intelligence (AI) has become more and more commercially popular. It is the science of creating a machine that is more intelligent than its creator. In its most advanced form, the intelligence is keyed up to a machine that moves like we do, looks like we do and communicates like we do using AI. This is called a *humanoid robot*.

This aspect of creating intelligence (something that thinks for itself) is copying God; therefore, it becomes the imagination of man that God condemned in the Bible (2 Corinthians 10:5, Romans 1:21). This invisible AI, much like the devil "re-creating" the Spirit of God's Third Person, is becoming tangible in the robot. The companies that are planning to or already do manufacture these robots say it is a great benefit to man to have robots and their AI...but God says otherwise.

In Revelation, the Beast will assist Lucifer in ruling the world. There can be no other readily available definition today of that Beast than AI. You see it already being used by national tyrants such as Putin (to whom Trump has made an affinity), being a typical Russian Czar in modern form with the desire to conquer the world. But the world's population is becoming insensitive to the

Robots may be considered the Beast of Revelation where God prophesied their coming with His passage about Apollyon opening the bottomless pit for his army of "locusts" to destroy man. Apollyon could have very well been a fallen angel of technology and engineering.

potential of AI to backfire as a "benefit to society." With increased use commercially and personally, AI is becoming a friend to man much like the internet did, and that very friend can learn *anything* man knows, including the meaning of *betrayal to its creator*. One of the first sins of man was betrayal to God; Can saying he was smarter than God and did NOT need the blood sacrifice, but that his vegetables were good enough. This led to the jealousy of his brother Abel's righteousness, and as a result he murdered Abel—the very first murder in the Bible.

Moreover, AI is creating more and more robotic comforts for us in the form of everyday things that we use to make life "easier." Today, you do not need to take a writing composition in college to write a professional

resume or essay, or even train to start and run a business with a website: as AI will do that for you. But be in known, I do NOT use any AI with my publications or art.

Comforts (the abundance of bread and idleness of mind) have always led the human race to some kind of abomination, one of these being the failure to be concerned about the eternity of our souls. It rules out soul winning to others and/or altogether makes us passive about our *own* need to be saved also. See *Soulwinner1-Issues 8 & 23* ([link the PDFs here](#)).
