

# Accelerate Performance

## Cut your LED lighting costs in half while improving quality. Vroom!

TurboLED is a new high performance light source from Luraline Lighting that will completely change the way you look at lumens. With TurboLED you can decrease the cost of each lumen by as much as 50% over typical LED light sources. It's the purest light we have ever laid eyes on, and will soon be available in almost any Luraline fixture. Now you can boost brightness while drastically reducing operating temperature and wattage.

- Up to 180 lumens per watt
- Reduced operating temperature
- Longer lasting - more than 60,000 hours
- Triac, ELV and 0-10V dimming available

### Fewer Watts per Lumen

You've heard of miles per gallon. Just think what it would mean if you could double your MPG. Imagine the energy and money you'd save. That's exactly what you can do with TurboLED. Now, instead of 60, 80 or 100Lm/W, with TurboLED the performance jumps to as much as 180Lm/W. You can save money every time you turn on a light.

### Enhanced Color

In addition to the huge energy savings, TurboLED also gives each fixture a better light. The superior color rendering index of TurboLED creates a brighter, more true light.

### Easy Ordering

TurboLED is a light source option available now on select Luraline fixtures. For up to date listings of those fixtures visit the TurboLED section of our website. With specific questions about this or other Luraline products, contact Luraline Lighting directly.

**Contact Luraline to boost your lighting performance with TurboLED.**
