What Does a Corrosion Engineer Need to Know about Coating under Insulation (CUI)?

Bruce Mitchell

Engineering Sales Manager, Carboline Company

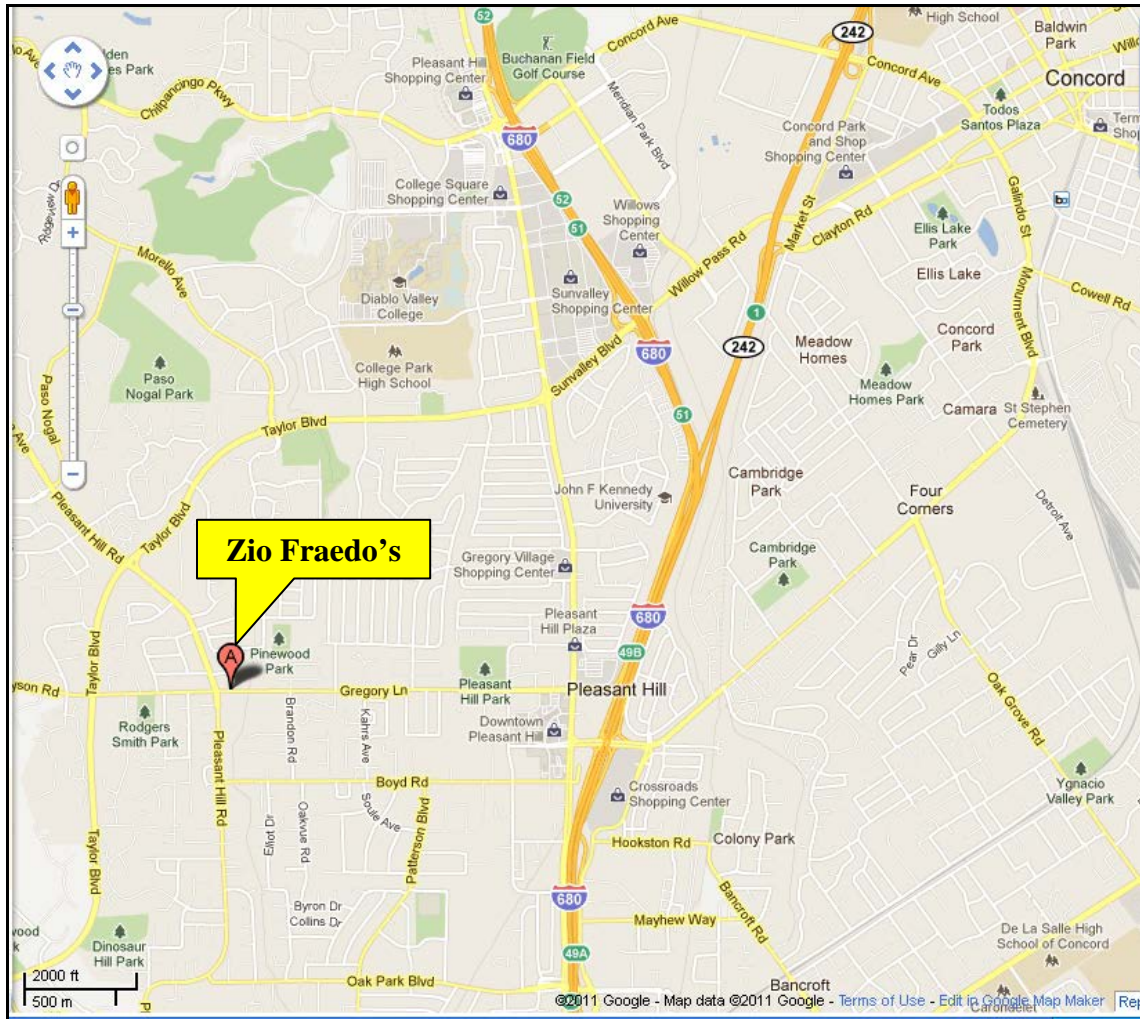

Our April, 2017 speaker is Bruce Mitchell, General Manager, West Region, Carboline Company. Bruce has a wide range of experience in his 17 years working for Carboline. Tonight he will be addressing corrosion protection under insulation, a topic encountered in many chemical and wastewater applications, and particularly of interest in power generation facilities and refineries. Bruce will discuss testing methods for evaluating and screening coating products for use under insulation. He will begin by comparing various older test methods used to select appropriate coatings for under insulation, and then describe a newly developed accelerated test method for coating evaluation in these applications. The test data from the accelerated method will be presented along with its benefits as a coating product screening tool. Bruce will also review NACE SP0198-2016 *Control of Corrosion under Thermal Insulation and Fireproofing Materials* as a guideline for choosing coating products for CUI protection.

Bruce Mitchell is currently General Manager, Western Region, for Carboline Company and a familiar face at local SSPC and NACE San Francisco Section events. Bruce has been a member of NACE since 1998, is a Past NACE Portland Section Chair and Trustee, and NACE CIP Level 1 certified. He is an active member of the SSPC and AWWA, where he has served on AWWA C210 and C222 Committees. He is Past Carboline Company member of the Steel Water Pipe Technical Advisory Committee (SWPTAC). As a Carboline employee, Bruce has held many positions over the past 17 years in Business Development and Sales Management.
