

Insertion of a Statement by the Plejare Ptaah, dated 14.4.2020:

"This pandemic could only arise through the non-observance of the early warnings, the incapability of the state leaders and the WHO, as well as the result of the mass of overpopulation. If the warning had been heeded and the right and necessary measures had already been taken early and with a sense of responsibility in China, then no pandemic would exist today because the corona virus would have been contained before it could spread uncontrollably and so quickly across the planet. The human beings/persons who died of the rampantly spreading Corona disease could still be alive, and humankind could go about its daily life. According to an official lying assertion/lie, the coronavirus allegedly only became known on Jan. 7, 2020, and the first case was then reported to the WHO, which, however, did not react at that time, nor thereafter, when it was much too late and it all became really known. The fact is that the rampantly spreading disease had already broken out earlier and claimed many deaths, but this did not become known. On the 8th of December 2019, in the city of Wuhan in China, a doctor first discovered the virus, and when he made his discovery known, he was arrested as a rabble-rouser, after which he then died at the beginning of February 2020 as a result of the rampantly spreading disease with which he had been infected. Therefore the first infections occurred in Wuhan much earlier, and indeed starting at the end of July 2019, from which then also many human beings of Earth died.

It is also a fact that Billy, and indeed verifiably in writing, had already predicted this rampantly spreading coronavirus disease in a conversation with me on February 3, 1995 and also talked to me about this in November 2019 and published everything in writing which, however, as usual was only taken seriously by the FIGU members, but not by the government officials or the public.

What the consequences are now, is that there is great suffering around the world, because well over 100,000 human beings have died of the rampantly spreading disease to date alone – and what the future will still bring regarding this, that will likewise still bring much suffering and also misery as well as unrest."
