

JB FIELDWORKS

Jamison W. Brown, PLA, ASLA
Principal

Jamison Brown has been interested in shaping our built world since his youth.

Growing up on a small farm gave him a strong foundation in the landscape.

Watching neighboring farms slowly swallowed by suburban growth gave him his ethic. His education in natural resources and architecture has shaped his holistic approach to design. This approach helps clients achieve the best possible outcomes for their projects.

Jamison's 20 years of planning and design experience includes managing projects through all phases of their life cycle, including all scales of projects in both rural and urban contexts.

Jamison's professional interests are in both restoring urban fabric, and educating communities and developers about techniques for sensitive growth.
