WEIGHT LOSS

"Being overweight or obese increases risks of diabetes, heart disease, cancer and issues of low self-esteem and depression. Families are affected as they watch loved ones suffer with a condition of which they have no control. Being over weight affects activities like using a bathroom, driving a car or traveling on an airplane. Hoping to conquer weight challenges, some turn to diets. Most can't deliver what they promise, and tend to be expensive. Diets are simply short term fixes to a long and difficult downward spiral. Diet pills can produce physical and emotional side effects. At

Beverly Hills South Pacific Surgery Center, our weight-loss programs change lives. Our professional weight loss experts not only help patients achieve safe and dramatic weight loss, but guidance to maintain the results you achieve. Call for a free consultation, talk to others who have been through our weight loss programs and learn about their success. Weight loss improves your physical and emotional health, and motivates you to achieve a happier, more fulfilling lifestyle — feeling confident in your body."

Cosmetic Makeovers

"What some refer to as 'lunch-time' cosmetic treatments increase your anti-aging options. Our team of plastic surgeons and cosmetic specialists work with our patients to achieve beautiful and natural looking results. Peels reduce age spots, fine lines, scars, wrinkles; Dermal injectables and laser restore a more youthful appearance to the face, hands and neck, remove unwanted tattoos, age spots, scars and unwanted hair. Body makeovers such as arm/thigh/breast/buttock implants, lifts and reductions give our patients a new lease on their lives as they move forward proud of the improvements they see."

"Nobody looks forward to having surgery, whether it's for a cosmetic procedure, or to finally address a health concern that is causing stress and body breakdown. But surgery doesn't have to be upsetting. At South Pacific Surgery Centers our main priority is patient care, and our team of experienced physicians, nurses and staff offer cutting-edge treatments in an efficient, and caring environment to make your surgery as comfortable as possible. I've worked in the medical field for more than 20 years as Operations Manager at my medical facilities and we have helped thousands of patients achieve not only their best look but their best in optimal health."
