Quality in a Class by Itself

1962 YORK CATALOG...

a complete line of quality archery equipment

There's More Behind a Bow Than the Archer

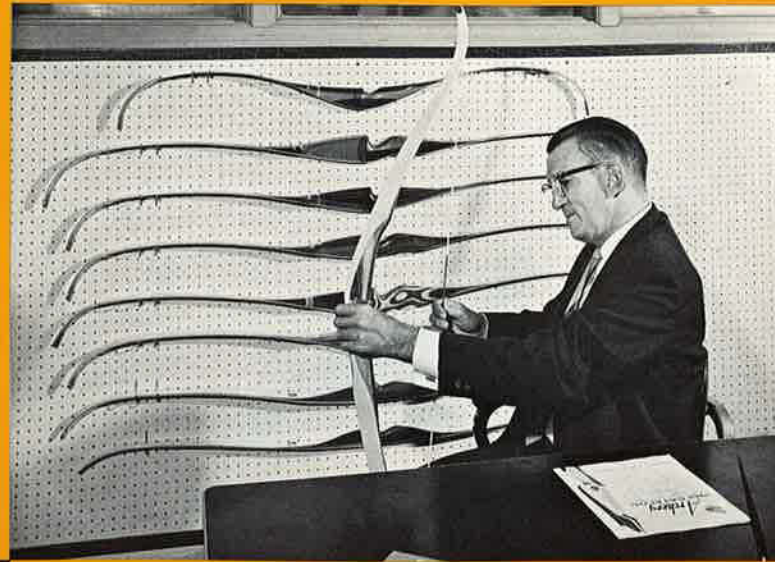

The above photograph of Ken Smith during a recent varmint hunt was used on the cover of a national archery magazine.

The York Guarantee

Every YORK product is guaranteed to be free from defects in workmanship or materials. The experience of 39 years in workmanship or materials. The experience of 39 years has developed a team of designing skill and production know-how at YORK that is unsurpassed in the Archery Industry. It is this team that makes the YORK Guarantee possible. Any YORK item which appears defective, and shows no evidence of mishandling or misuse, should be sent prepaid direct to YORK Archery, Independence, Missouri, for replacement or repair.

YORK Quality - a forty year tradition that became a responsibility.

Ken Smith, president of York Archery and nationally recognized designer, craftsman and archer, inspects one of the latest York Thunderbolt bows.

The matchless performance of YORK bows is no happy accident. It is the planned result of painstaking research, careful engineering and high standards of production.

Every YORK bow design is subjected to exhaustive field tests over extended periods of time. As "bugs" are discovered design changes are made and testing is resumed. Some YORK bows have had as many as nine design changes before being deemed worthy enough of the YORK name to be offered to the public.

Knowing that there's many a slip between a perfect bow design and the perfect bow, YORK exercises the strictest quality control over every step of the process of bowmaking. Results speak for themselves. Last year, while sales of YORK custom composite bows doubled, breakage and limb failure all but vanished—a record achievement in the industry.

To thousands of YORK archers, YORK sets the standard of quality for others to follow, from beginning archery sets to the magnificent custom composites. There's more behind the bow than the archer, when the bow is made by YORK.

The York Thunderbolt is prominent on the bowhunting scene throughout the nation.

A Guide for Selecting Proper Equipment

CHOOSING PROPER ARROWS

Fig. 1
Determining Arrow Length

and upon the accuracy with which arrows are fletched (feathered). For consistent shooting it is also very essential that the pounds of force or thrust behind each arrow shot must be exactly the same. The "pounds of pull" of a bow is an expression of the pulling force required to "draw" that bow (pull the bowstring back) to a fixed distance. If the pulling weight of the bow (and the resulting thrust behind the arrow) is to be consistent, it will be readily understood that the length to which the bow is pulled must be the same for each shot.

In Archery the arrow is the gauge which regulates this pulling distance. For each shot the arrow should be pulled back to where the point is flush with the back of the bow (the bow surface farthest from the eye). When the point of the arrow is flush with the back of the bow, the length of the arrow should be such as to enable the Archer to "anchor" on his chin with the bowstring in front of his eye. When these requirements are met, the Archer is accomplishing a "full draw" (See Figs. 3 & 4). Any amount of length in an arrow which extends beyond the back of the bow is not only "dead weight" but also tends to eliminate any possibility of accurately gauging the length to which the bow is being drawn.

From the above, it will be observed that the selection of proper equipment begins with the choice of arrows. To correctly measure the length of arrows suitable for your use, place the nock of an arrow in the center of your chest about six inches below the chin. Hold the point end between the palms of your hands. With the arms extended to their full reach, straight out in front of you, the point of the arrow should extend to the tips of the fingers (See Fig. 1). This is the proper method of equipping the individual with "target" arrows.

For selecting the proper arrows of other types, refer to Fig. 2. Select each type of arrow so that the tips of the fingers extend to that point on the arrows indicated by the dotted line.

CHOOSING PROPER BOWS

YORK Solid Fiber Glass Bows

YORK pre-tensioned and tillered solid fiber glass bows are absolutely unbreakable when pulled by the bowstring as an Archery bow should be pulled. Because they are unbreakable, tradition is not so much involved in the selection of a YORK solid glass bow. This choice depends

upon the type of Archery in which the individual is most interested. A very short solid fiber glass bow (in its relationship to the length of the arrow with which it is used) will provide maximum cast and striking power. This can be ideal for the occasional shot experienced in bow hunting but, for continuous shooting in target Archery or in practicing the field rounds in training for bow hunting, a longer solid fiber glass bow will be appreciated for its smoother action and for the elimination of the kick and jar which causes fatigue when many arrows are being shot in succession. The specifications in the YORK catalog in connection with solid fiber glass bows are flexible but tend to provide smoothness in shooting. Therefore, the individual's choice of bow length, in relation to the length of the arrows which he has determined to be proper for his use, will depend upon whether he prefers the "smoothness" provided in the specifications or whether he would prefer the "hard hitting" power of a bow as much as six inches shorter.

upon the type of Archery in which the individual is most interested. YORK Custom Quality Composite Bows

This group of bows make up the YORK supreme quality line and provide the modern day archer with shooting performance, dependability and pleasure far beyond the dreams of archers ten years ago. Each of these bows is a unique and classic example of the bowyer's art, offering the utmost in value and individual design in every model.

Almost four decades of designing experience and production know-how, as well as modern materials and technology, are behind the YORK Custom Composite bows. The result is a group of dignified bows which are "light in the hand" for easy handling and smooth shooting, are loaded with power for hard impact and flat trajectory, and will discharge equal "loads" of power, shot after shot, whether in August or December.

Regardless of the choice, from the superb YORK IMPERIAL to the budget priced CADET, there is real pride of ownership in the possession of any of the YORK Custom Composite bows. You'll want to say to your friends, "this is my bow."

IN CHOOSING A BOW

If you are new in Archery first know your arrow length — give careful thought to the type of Archery in which you are going to be most interested—then carefully observe the specifications for each bow. Let your bow choice be a little long for target shooting or lots of field practice—a little short for maximum cast and striking power in hunting.

In choosing any bow—do not make the mistake of becoming "over-bowed." Choose one that you can pull without straining. You will be able to develop more proper shooting habits and progress more rapidly than if your bow is too strong for you. 35 to 40 pounds pull is about right for a man's target shooting bow. For hunting 45 to 55 pounds. Women's bows should be 15 pounds lighter. Bows for boys and girls still lighter. The stronger bow should come later when you have developed the pulling strength and when your judgment is supported by shooting experience.

Arrow Length Is Measured from Bottom of Neck to Point Indicated by Dotted Line.

**the ultimate in beauty
and performance!**

Imperial

For the tournament archer who demands just a little bit more, the York Imperial is again in 1962 the world's standard in custom composite bows. The Imperial is unmatched in handling ease and natural feel with a sweeping beauty that is a subtle commendation to the bowyer's art. Brazilian Rosewood blends with American Walnut in a most strikingly harmonious design. Rosewood overlay on bow face lends rich distinction while reducing glare and eye strain. In crafting the Imperial, York engineering has achieved the highest possible limb efficiency with the maximum smoothness and stability . . . a unique combination that results in consistent pinpoint precision from first arrow to last, tournament after tournament.

IMPERIAL BOW FEATURES

Full working recurved composite with wood core. Backed and faced with finest fiber glass. Center shot vertically and horizontally. Full length target sight window. Versatile handle design is comfortable and natural for both conventional and straight wrist shooters. Double looped Dacron string served at ends and at nocking point. Available for both right and left handed archers.

Cat. No. SWR-1 Length 68 in.

Pulling weights to 65 lbs. For arrows to 30 in.
Weighed at 28 in. draw

Recommended brace height: 7½ in. to 8 in.

Cat. No. SWR-2 Length 64 in.

Pulling weights to 65 lbs. For arrows to 28 in.
Weighed at 28 in. draw

Recommended brace height: 7 in. to 7½ in.

Thunderbolt

Get the feel of the world's finest hunting bow, the sensational Thunderbolt! This rugged, hard-hitting hunter is at home in dense woods, on open range, has an amazing smoothness in shooting that meets every demand of the Archer-Hunter. The handle section is laminated from rich American Walnut and lace-grained Beechwood. The graceful lines of these laminations blend with the dramatic sweep of the limbs for the most impressive, the most beautiful hunting bow you'll ever handle.

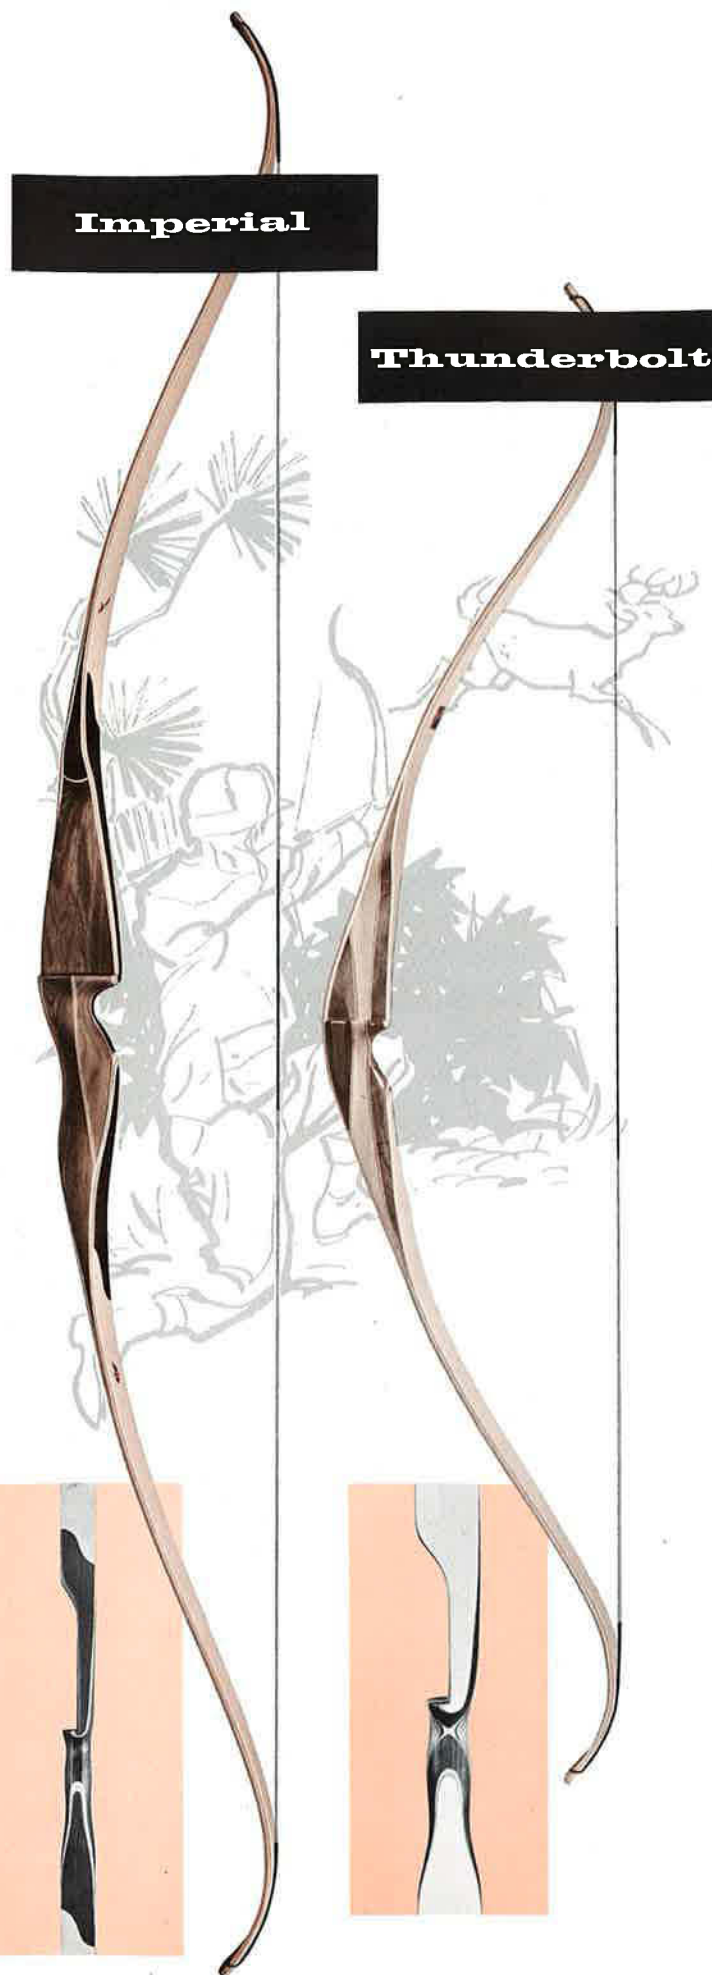

THUNDERBOLT BOW FEATURES

Working recurved composite with wood core, backed and faced with finest fiber glass. Hunting sight window. Extreme stability provided by forward placement of the deflexed, saddle-type contoured handle. Modern Epoxy resins in fiber glass backing and facing, and Epoxy adhesive in the laminations. Double looped Dacron string, served at ends and at arrow nocking point. Available in both right and left handed models.

Cat. No. RRH Length 54 in.

Pulling weights to 70 lbs. For arrows to 30 in.
Weighed at 28 in. draw

Recommended brace height: 7 in. to 7½ in.

**matchless beauty teamed
with superb performance!**

Super Crest

One of the world's most versatile bows, excellent for bowhunting, field shooting, target shooting! The Super Crest has accuracy, speed and smoothness built into every draw. American Walnut is combined most harmoniously with rich Brazilian Rosewood in clean, flowing lines that complement overall bow design to provide unusual beauty. The Super Crest is best for the archer who wants an all-purpose bow with quality, beauty and dependability.

SUPER CREST BOW FEATURES

Full working recurved composite with wood core. Center shot both vertically and horizontally. Made with medium length sight window. Backed and faced with finest fiber glass, deflexed for stabilization. Specially contoured handle for maximum comfort and natural feel. Modern Epoxy resins in fiber glass backing and facing and Epoxy adhesive in laminations. Available for both right and left handed archers.

Cat. No. DRG-1 Length 66 in.

Pulling weights to 65 lbs. For arrows to 30 in.

Weighed at 28 in. draw

Recommended brace height: 7 in. to 7½ in.

Cat. No. DRG-2 Length 64 in.

Pulling weights to 65 lbs. For arrows to 28 in.

Weighed at 28 in. draw

Recommended brace height: 7 in.

Crown IV

Designed as an all purpose bow, the Crown IV is every inch a champion and a favorite among York's fine line for 1962. The Crown IV has the speed, smoothness and stability normally found only in more expensive models. The rich American Walnut in the handle and risers has a lustrous, hand rubbed finish and is perfectly shaped to provide a comfortable, balanced feel. The design has a beautiful simplicity that indicates quality and good taste.

CROWN IV BOW FEATURES

Full working recurved composite with wood core. Center shot both vertically and horizontally. Made with medium length sight window. Backed and faced with finest fiber glass, deflexed for stabilization. Modern Epoxy resins in the backing and facing and Epoxy adhesives in laminations. Double looped Dacron string, served at ends and at arrow nocking point. Available in both right and left handed models.

Cat. No. WRC Length 64 in.

Pulling weights to 65 lbs. For arrows to 30 in.

Weighed at 28 in. draw

Recommended brace height: 7 in.

Coronet

Crest

Crescent

Cadet

For real shooting satisfaction!

Coronet

The Coronet was introduced into the York line in 1961 and was immediately recognized by expert archers as a remarkably efficient bow and an outstanding value. With longer limbs and a new handle contour, the Coronet is handsomely crafted of White Holly and American Walnut and provides speed, smoothness and shooting comfort to please the most demanding tournament archer.

CORONET BOW FEATURES

A modified recurved, reflexed composite bow with wood core, backed and faced with finest fiber glass. Center shot, vertically and horizontally with full length sight window. Modern Epoxy resins in fiber glass and Epoxy adhesive in laminations. Double looped Dacron string, served at ends and at nocking point. Available in both right and left handed models.

Cat. No. SRZ

Length 66 in.

Pulling weights to 65 lbs.

Weighed at 28 in. draw

Recommended brace height: 7 in. to 7½ in.

Crest

The Crest is a moderately priced bow with real "feel" for hunting or target shooting, combining York custom quality with lightness and speed. You get uniform performance from the Crest day in and day out, for it has the rugged stamina demanded by the experienced archer. This year a 60-inch Crest is also offered, specially designed for women and those archers who require a shorter bow for maximum limb efficiency.

CREST BOW FEATURES

A modified recurved, reflexed, composite bow with wood core, backed and faced with fiber glass. Center shot, vertically and horizontally, with full length sight window. Extra laminations of Northern Hard Maple and American Walnut for added beauty, finished to satin smoothness. Modern Epoxy resins in fiber glass and in laminations. Double looped Dacron string, served at ends and at nocking point. Available in both right and left handed models.

Cat. No. RRS-1

Length 64 in.

Pulling weights to 60 lbs. For arrows to 30 in.

Weighed at 28 in. draw

Recommended brace height: 7½ in.

Cat. No. RRS-2

Length 60 in.

Pulling weights to 45 lbs. For arrows to 28 in.

Weighed at 26 in. draw

Recommended brace height: 7 in.

Crescent

Here's a value-packed, budget-priced composite bow that takes weather, rough treatment, keeps coming back to give real shooting satisfaction time after time! A reflexed modified recurve with smoothness, accuracy and a graceful beauty far beyond its moderate price. Start with one of the best for best results; own a Crescent with pride, use it with confidence.

CRESCENT BOW FEATURES

Modified recurved, reflexed, fiber glass backed and faced. Medium length sight window, saddle-type contoured handle. Double looped Dacron string, served at ends and at nocking point. Laminated construction with satin smooth finish. Available in right and left handed models.

Cat. No. GBF-1

Length 64 in.

Pulling weights to 55 lbs. For arrows to 28 in.

Weighed at 28 in. draw

Recommended brace height: 7 in.

Cadet

A composite bow at a remarkably low cost. With the Cadet, you have the lightness in weight, hard shooting quality and the consistency found only in fiber glass and wood composite bows. Perfect for beginners.

CADET BOW FEATURES

Modified recurved, reflexed composite, backed and faced with fiber glass. Contoured handle with built-in arrow rest. Double looped Dacron string, served at ends and at nocking point. Available in right and left handed models.

Cat. No. BFB

Length 60 in.

Pulling weights to 36 lbs. For arrows to 28 in.

Weighed at 26 in. draw

Recommended brace height: 6½ in.

Quality Craftsmanship in Fiber Glass

Bows by YORK

Special Process, Pre-Tensioned, Tillered Straight-Limbed Fiber Glass Bows by YORK

As a serious art and as a sport, Archery has a long, colorful history. The very nature of Archery is such that breakage has been a factor throughout that history. But now there are YORK special process, pre-tensioned and tillered, solid fiber glass bows, each carrying an unconditional guarantee against breakage!

Fiber glass bows are composed of thermo-setting resin and countless filaments of fiber glass. The resin alone is useless for an archery bow, the limp glass is obviously useless. Unsupported, the glass is brittle, with no strength. Embodied in and surrounded by resin, it takes on tensile and compression strengths that are tremendous.

The fundamental goal in Archery is to obtain the flattest trajectory possible with the accompanying maximum striking power. The proper ratio of glass fibers to resin content, the uniform distribution of glass fibers within the resin and the organization of the fibers as the resin is heat-cured around them is of utmost importance. The perfection with which these requirements are met by the YORK process can not be approached by any other method.

Being unbreakable, it is obvious that there could be no better bows for boys and girls. Schools and institutional groups can do no better than to choose these bows. They are ideal for use in public ranges. In heavier weights, they serve the bow hunter at a very moderate investment.

Choose from the solid flat style SG group or the unbelievably low priced JG group. All carry the same YORK unconditional guarantee. All pack the same "bonus pounds per ounce" which only pre-tensioning can provide.

SATELLITE SERIES

Perfect choice for beginning archers, school Archery classes! Bows in YORK's Satellite Series are made of tough, durable fiber glass with recurved ends, flat contoured limbs, molded saddle-type handles and built-in arrow rests. Each streamlined beauty is built to precision for perfection in detail, finished in rich, glowing colors. Weather conditions will not affect the performance nor mar the beauty of these hard-shooting bows. Dollar for dollar, feature for feature, you won't find a better bow anywhere!

- Cat. No. RG-56 "Polaris" 5 ft. 6 in. Recurved.
Dual arrow rest. 30, 35, 40, 45, 50, 55 lb.
pulling weights at 28 in. draw.
- Cat. No. RG-50 "Titan" 5 ft. Recurved.
Dual arrow rest. 20, 25, 30, 35, 40, 45, 50, 55 lb.
pulling weights at 28 in. draw.
- Cat. No. RG-46 "Jupiter" 4 ft. 6 in. Recurved.
With sight window. Approximately 25 lb.
pulling weight at 24 in. draw.
- Cat. No. RG-40 "Atlas" 4 ft. Recurved.
With sight window.
Approximately 20 lbs. at 22 in. draw.

UNCONDITIONALLY GUARANTEED

Straight Limb Series Solid Fiber Glass Bows—Extra Value

These fiber glass bows by YORK are made especially for the beginner. Here are bows of unusual cast and power, practically indestructible, yet offered at unbelievably low prices. Every one of these bows is unconditionally guaranteed against breakage.

JG BOW FEATURES

Narrow, power-packed, anti-inertia limbs. Finest saddle type, molded, contoured handle. Dual arrow rests, for right or left hand Archers. Hemp string. Both bow and handle unaffected by normal heat or cold, or moisture.

- Cat. No. JG-48 4 ft. 8 in. Weights to 40 lbs.
Tillered at 26 in. arrow length.
- Cat. No. JG-46 4 ft. 6 in. Weights to 30 lbs.
Tillered at 26 in. arrow length.
- Cat. No. JG-44 4 ft. 4 in. Weights to 25 lbs.
Tillered at 24 in. arrow length.
- Cat. No. JG-40 4 ft. Weights to 22 lbs.
Tillered at 22 in. arrow length.
- Cat. No. JG-36 3 ft. 6 in. Weights to 16 lbs.
Tillered at 20 in. arrow length.

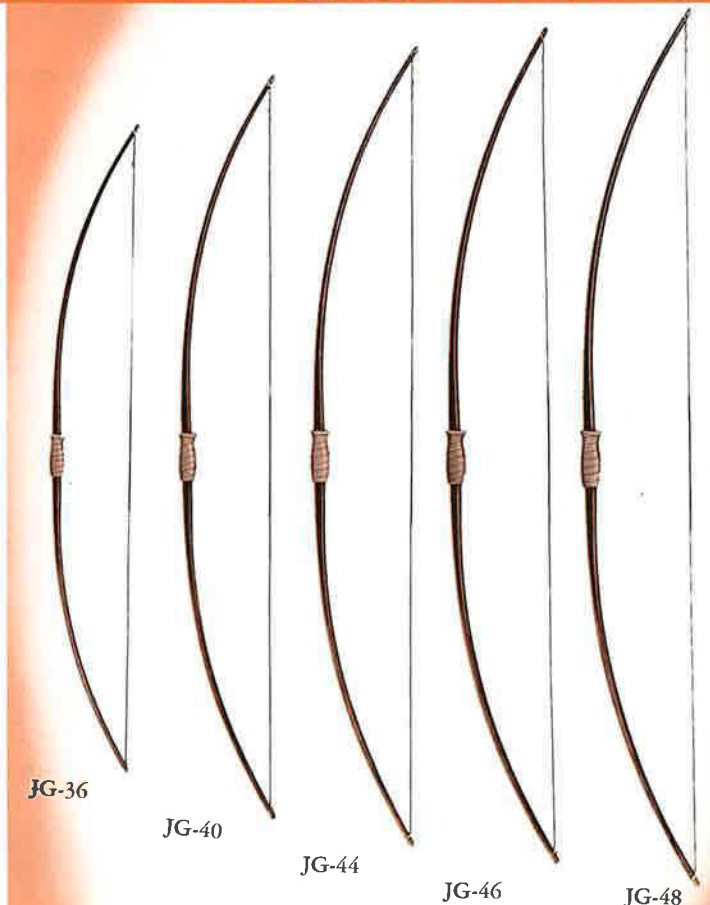

These bows may be used with longer arrows than those specified, each additional one inch of arrow length will add three pounds of pulling weight.

Solid Fiber Glass Bows With Wide Contoured Straight Limbs

Dual purpose . . . tremendous cast for hunting,—fatigue-free smoothness in longer lengths for continuous shooting. Flat style, with extended narrow section above handle for sighting. Finest saddle-type, molded, contoured, handle. Dual arrow rests, for right or left hand Archers. Double looped Dacron string, served at ends and at nocking point. Perfectly tillered. Will not take a set . . . can be left strung without bow damage. Both bow and handle unaffected by normal heat or cold, or moisture.

- Cat. No. SG-54 5 ft. 4 in. Straight bow.
Weights to 65 lbs. at 28 in. draw.
- Cat. No. SG-50 5 ft. Straight bow.
Weights to 60 lbs. at 26 in. draw.

Best Beginners' Arrows by YORK

CAT. NO. PA BEGINNER'S SELECT PRACTICE TARGET ARROWS. Shafts of Port Orford Cedar, 5/16 inch in diameter, finished in clear flexible lacquer. Fitted with parallel target points and replaceable index nocks. Wide, bright crestings and accurate fletching with odd cock feathers. Supplied in 24, 25, 26, 27, and 28 inch lengths.

Cat. No. PA 1 dozen in box. State length desired.

Artistry in Fine Leather Hunting Quivers by YORK

HQ-88

HQ-88

This beautifully hand crafted center-back, quiver of top-grain, elk-tanned cowhide is as beautiful as it is practical! The exclusive YORK harness (with no dangling straps), can be worn either straight pack-style or "YORK-STYLE" through a simple snap and ring arrangement (see illustration). Unique, YORK-designed, internal provision for separating arrow compartment into 1, 2 or 3 sections.

The culmination of years of field trial, this quiver is designed for the hunter who demands BOTH quality and versatility. Equipped with large zippered pocket 6x12½ inches. Length 22 inches. Top opening 8x3½ inches tapering to 6½x3¼ inches at bottom. Available in two-tone tan and brown or in solid turf-tan. Specify color desired.

HQ-88S. Same design as HQ-88, but made of genuine Scotch grain leather.

HQ-66

YORK's finest shoulder-style hunting quiver of top-grain elk-tanned cowhide. Designed with secondary strap (see illustration) extending from lower back of quiver around side opposite shoulder strap to a snap ring at chest. Ample adjustment in both straps.

Unique, YORK-designed, internal provision for separating arrow compartment into 1, 2 or 3 sections. Equipped with large zippered pocket 6x12½ inches. Quiver length 22 inches. Top opening 8x3½ inches tapering to 6½x3¼ inches at bottom. Available in two-tone tan and brown or in solid turf-tan. Specify color desired.

HQ-66S. Same design as HQ-66; but made of genuine Scotch grain leather.

HQ-66

HQ-66S

HQ-22

Shoulder-style quiver of genuine Scotch grain leather. Finely crafted with ample adjustment in shoulder strap. Designed for carrying 8 to 12 arrows. Length 19 inches, top opening 6 x 3½ inches, bottom 3½ x 2 inches. Available in two-tone tan and brown.

HQ-21

Same as above except made of durable Walrus grain Ser V Lon. Harness of top-grain smooth cowhide.

HQ-40

A large, 22 inch shoulder-style quiver of heavy weight Walrus grain Ser V Lon. Handsome harness of top-grain smooth cowhide. Sturdy buckle adjustment in the shoulder strap. A rugged and budget priced quiver. Top opening of 8x3½ inches, bottom of 6x3½ inches.

HQ-10

Serviceable, beginners, shoulder-style quiver of Walrus grain Ser V Lon. Top-grain smooth cowhide strap with ample adjustment. Length 18 inches, top 3½ inches in diameter, bottom 3½x2 inches.

JHQ-10

Same as above except 15 inches in length designed for younger archers.

1 Illustrates center-back style of HQ-88, HQ-88S and HQ-20.

2 Illustrates pack-harness style of the HQ-88, HQ-88S and HQ-20.

3 Illustrates the center snap extra feature of the versatile HQ-88 and HQ-88S.

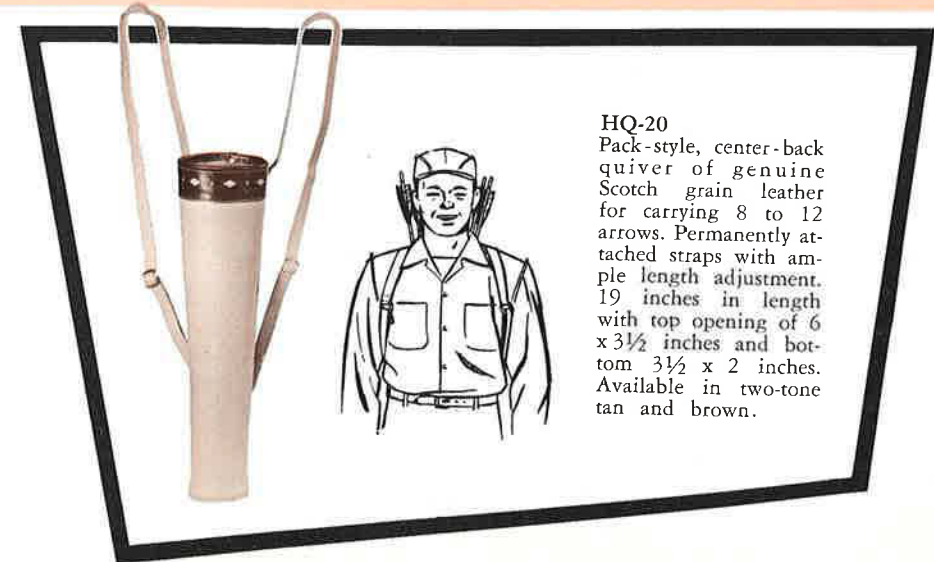

The famous YORK harness has no dangling straps, is versatile so that it can be worn either straight pack-style or "YORK-STYLE," through a simple snap and ring arrangement. Each quiver is distinctively styled by fine craftsmen in beautiful, supple leathers.

4 Illustrates the 2-strap harness featured on the HQ-66 and HQ-66S.

5 Illustrates shoulder-style position of the HQ-66, HQ-66S, HQ-22, HQ-40, HQ-21, JHQ-10.

HQ-20

Pack-style, center-back quiver of genuine Scotch grain leather for carrying 8 to 12 arrows. Permanently attached straps with ample length adjustment. 19 inches in length with top opening of 6 x 3½ inches and bottom 3½ x 2 inches. Available in two-tone tan and brown.

Target Quivers by YORK

LQ-20 Large, fine quality man's target quiver of top-grain, elk-tanned cowhide. 20 inches in length with top opening 2 1/2 inches.

LQ-17 Same fine quality as the LQ-20. Smaller size but conveniently holds target archer's 6 arrows. Length 17 inches with top opening 1 3/4 inches.

WLQ Same as LQ-17 but specifically designed with complete belt assembly for women and girls' use.

bly for women and girls' use.

TQ-17 Designed of Walrus grain Ser V Lon this target quiver easily holds target archer's 6 arrows. It is 17 inches long and has a top opening 1 3/4 inches wide. Straps of top-grain smooth cowhide.

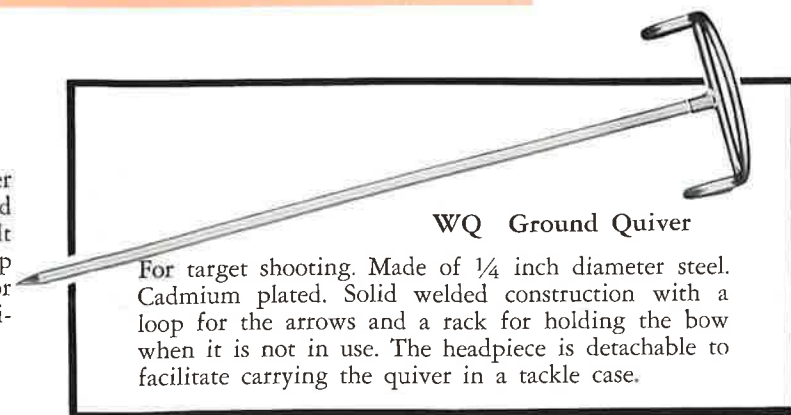

WTQ Same as TQ-17 but specifically designed with a complete belt assembly for women and girls' use.

No. TFQ New style belt quiver for target and field archers. Top grain leather with side pocket and special divider strap.

No. AQ-17 Serviceable target quiver of brown Walrus grain Ser V Lon for carrying twelve arrows. Formed stiff leather bottom and loop for attaching to wearer's belt. Length 17 inches, top opening 2 1/2 inches.

PQ-10 Pocket Quiver
A firmly riveted and sewn quiver of strap leather and elk-grained cowhide for fitting onto the belt and inserting into the hip pocket. Preferred by men for target Archery because of minimum encumbrance.

WQ Ground Quiver
For target shooting. Made of 1/4 inch diameter steel. Cadmium plated. Solid welded construction with a loop for the arrows and a rack for holding the bow when it is not in use. The headpiece is detachable to facilitate carrying the quiver in a tackle case.

Miscellaneous by YORK

YORK TARGET BUTTS

Tournament Approved

These targets are machine-made of very long length marsh grass. They are not attractive to vermin and thus do not constitute a warehousing problem in that respect. They are 4 inches thick, are firmly stitched with tarred sisal twine and will render long, satisfactory service. Being spirally-wound, they should not be confused with machine-made targets which are made by stuffing and quilting between two layers of burlap because these spirally-wound targets will render far longer and more satisfactory service.

- Cat. No. MG-48 — 48 in., wt. approx. 65 lbs.
- Cat. No. MG-36 — 36 in., wt. approx. 37 lbs.
- Cat. No. MG-24 — 24 in., wt. approx. 18 lbs.

IMPORTANT NOTICE:
MG targets are shipped direct from the factory in Columbus, Nebraska. Orders of 100 lbs. or more will be shipped by rail freight, PREPAID. All prices are delivered prices if you plan your orders to total 100 lbs. or more. Orders under 100 lbs. will be shipped rail freight, COLLECT. If your location makes truckline freight advantageous, you must balance this advantage against the fact that truckline rates are .80 per cwt. higher than rail rates. When, according to your instructions, we ship by truck, PREPAID, you will be billed for this .80 per cwt. difference. ALSO, TRUCK LINE SHIPMENTS MUST TOTAL 150 LBS. OR MORE TO AVOID SPECIAL TRUCKLINE SURCHARGES ON SHIPMENTS UNDER 150 LBS.

DRAWSTRING TARGET FACES

Drawstring faces which can be applied to the target in ten minutes—no tools required. Made of dull oilcloth with heavy cloth drawstring bands. Non-glaring, standard colors; in most appropriate shades.

- Cat. No. TF-48—48 inch.
- Cat. No. TF-36—36 inch.
- Cat. No. TF-24—24 inch.

Cat. No. T-50—5 ft. for 36 inch or 24 inch targets.

Cat. No. T-60
Cat. No. T-50

BOW FISHING EQUIPMENT

CAT NO. GFA SPECIAL BOWFISHING ARROW. Shaft is solid fiber glass, 5/16 inch in diameter. Special fishing point has double barbed, tempered tip which is removable for easy extraction of the arrow from the fish. Waterproof, rubber, 3-vane fletching. Brilliantly crested. Drilled holes provided for line at point and also at nock. Lengths 28 and 30 inches.*

CAT. NO. GFA-2 SPECIAL BOWFISHING ARROW. Same as No. GFA except that point is not tempered and does not have removable, barbed tip. Lengths 28 and 30 inches.*
*Individuals customarily use fish arrows up to 2 inches longer than their properly fitted target or field arrows.

DFP-35 Special Fishing Point. Double barbed, tempered point which is detachable for easy extraction of arrow from fish. 5/16 inch diameter, parallel bore.

M-55 Fishing Reel. Made of chrome finished steel. Easily taped to bow. Complete with 60 feet of 72 lb. test line.

FP-35 Solid Double Barbed Fishing Point. 5/16 inch parallel bore.

YORK BOWSTRINGS

CAT. NO. DS BEST QUALITY DOUBLE LOOP DACRON BOWSTRINGS. Served at the loops and at the arrow nocking area. Available for these bow lengths.

Bow Length		Bow Length	
No. DS-59 for 5'9" bow	No. DS-53 for 5'3" bow	No. DS-50 for 5' bow	No. DS-48 for 4'8" bow
No. DS-58 for 5'8" bow	No. DS-56 for 5'6" bow	No. DS-46 for 4'6" bow	
No. DS-56 for 5'6" bow	No. DS-54 for 5'4" bow		

NOTE ON BOWSTRINGS: Bowstrings should be ordered by specifying the nock-to-nock length and weight of the bow. DO NOT ORDER BY STRING LENGTH. Nock-to-nock length of straight bows is easily measured, if not marked on the bow. If recurve bow length is not known, measure with limp tape held tightly against back of bow—tightly following all curves—from nock to nock.

CAT. NO. RS BEST QUALITY SINGLE LOOP DACRON BOWSTRINGS. Served at the arrow nocking area. When the nock-to-nock bow length cannot be accurately determined, it is sometimes better to order single loop strings because the one plain end permits adjustment. Packaged in plastic box.

- Available in three lengths:
- Cat. No. RS-52 for bows 5' to 5'4"
- Cat. No. RS-56 for bows 5'4" to 5'8"
- Cat. No. RS-60 for bows 5'8" to 6'

CAT. NO. DBS DOUBLE LOOPED BRAIDED DACRON BOWSTRINGS. Available in two lengths for bows not exceeding 35 lb. Packed in plastic box.
Cat. No. DBS-40 for 4' bows
Cat. No. DBS-46 for 4'6" bows

CAT. NO. FS-60 LOW-PRICED HEMP BOWSTRINGS. Braided, single loop. One size, for bows to 6 feet in length. Packed in plastic box.
