

CO₂ emissions due to burning. A greenhouse gas enhances GE, causes GW and CC.

Expensive to build. Very large initial outlay

Few jobs created after building completed

Toxic gases like dioxins are released causing air pollution, environmental damage, harmful to health.

CAMBRIDGE WASTE INCINERATOR
AGREE WITH THE DECISION

High transport costs
Pollutants from lorries.
Damage to health + environment + increased congestion.
Lower quality of life

The Ash produced has chemical toxins may need burying

May discourage recycling and reduce local and national recycling rates.

NOT SUSTAINABLE

Very close to a new ecotown which is aiming for Zero Impact as part of a government push for ecotowns

Large building with tall chimney creates an eyesore in a predominantly rural area

Recycling is much better. Incineration is only just better than landfill
